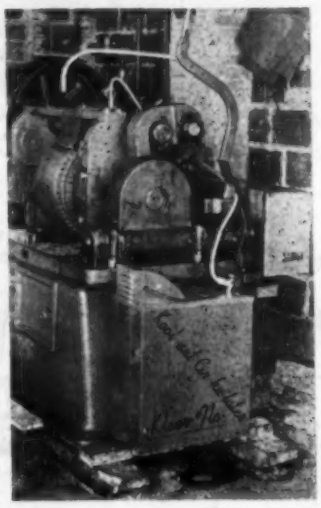
COOLANT SYSTEM



Adaptable to any machine, Cool-Ant Cir-ku-Lators provide ample flow of coolant or cutting oil for wet machining and wet grinding operations. Completely self-contained, unit consists of 8-gallon 20-gage steel cabinet, 110 or 220-volt 60-cycle motor driving open impeller type circulating pump, renewable filter and 5 feet of ⅜-inch hose for applying coolant to work. Pump has capacity of 75 gallons of SAE 10 or lighter oil per hour. Chips or grit cannot clog pump. Flow can be regulated to any desired quantity by regulator valve. Distributed by Kleer-Flo Distributors, Inc., 250 W. Fifty-seventh St., New York, N. Y.

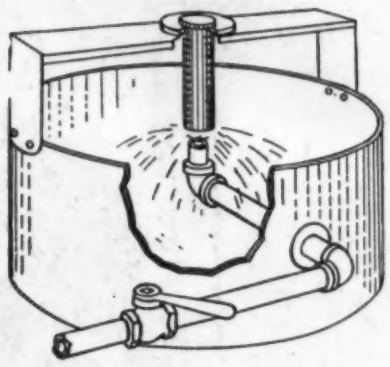
WIRE ROPE CLAMPS

Formerly available only in nine sizes, Safe-Line wire rope clamps are now made in 13 sizes ranging from 1/16 to ¾-inch diameter cable sizes. New small sizes were added to permit use on aircraft and boats. Feature of these easily attached and removeable clamps is precision inside grooving of forged and coined clamping halves which pocket and grip large spiral strands of wire rope. Large grooves prevent end-wise slippage and smaller grooves prevent rope from spiral-winding out of clamp. Every strand and surface wire contacts full length inner surface of clamp. Two halves are gripped tightly onto rope by alloy steel nuts. These units have been tested and approved for use on high tensile strength wire rope by Underwriters' Laboratories. Wire ends are enclosed for safety. Rustproofing by heavy cadmium plating is available at slight additional cost. Made by National Production Co., 5002 St. Jean Ave., Detroit 13, Mich.

▲ Mention Item NED-1196-A when writing ▲

END QUENCH TEST FIXTURE



Facilitating making of Jominy end quench hardenability tests for National Emergency or NE steels, this fixture with its accessory tongs is simple to use. Equipment permits determination of response of NE steels to heat treatment in accordance with standard practice as approved by American Iron and Steel Institute. Made by Claud S. Gordon Co., 3000 S. Wallace St., Chicago 16, Ill.

SURPLUS MATERIALS

■ Raw and fabricated materials, standard parts, motors, hardware, fabrics, precision tools, equipment and other surplus stocks are being offered for sale by the Army Air Forces.

Companies interested in such materials and who are desirous of having their names placed on the active bidder's list are invited to write to the Army Air Forces, Materiel Command, Midcentral Procurement District, 111 W. Jackson Blvd., Chicago 4, Ill. Attention: Redistribution and Salvage Section.

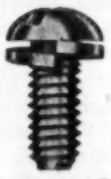
FASTENING DEVICES

Preassembled with internal or external Springtite, KnolinK or Springlox lock washers which are not removable, Springtite Semblies are fastening devices which speed production and assembly operations. First announced in 1941, these combination screw-lock-washer units are now available in wide range of sizes and in all head types, including round fillister binding or truss, Phillips, recessed hexagon, hex head internal and slotted hex external.



Claimed advantages include savings of time, space and waste, as well as long life and low costs. Spring lock washer is placed on blank bolt or screw of any size head type and then threads are rolled on blank. This keeps lock washer on and makes assembly single unit. Having washer already in place effects considerable savings in all assembly operations requiring locking screws or bolts. Made by Eaton Mfg. Co., Reliance Spring Washer Div., Massillon, O.

Anti-fouling paints currently being tested promise to eliminate need for drydocking boats to remove barnacles from hulls. Poison incorporated in paints is claimed to prevent barnacles from cementing themselves to ship's hull. Hercolyn resin acts as plasticizer in paints to keep them open and soft, leaving poisons free to protect surface. Developed by Hercules Powder Co., Wilmington, Del.

▲ Mention Item NED-1201-A when writing ▲

Claimed to maintain efficiency of gun crews by keeping plane's armament at proper firing temperatures, conductive rubber heating pads are being installed on machine guns and aerial cannon. Low voltages applied to rubber produces varying temperatures ranging from 30 to 200 degrees above zero, depending upon operating conditions. Developed by United States Rubber Co., 1207 Rockefeller Center, New York, N. Y.

▲ Mention Item NED-1202-A when writing ▲

Fluorescent plastic envelopes made of Plastacele cellulose acetate incorporating fluorescent pigment are making possible night map reading aboard Allied planes, ships and small boats, without need for blackout quarters for the navigator. Markings applied to surface of envelope may be erased and surface reused many times. Materials enclosed in envelopes are readily visible also under ordinary illumination or daylight. Made by E. I. du Pont de Nemours & Co., Plastics Dept., Wilmington 98, Del.

▲ Mention Item NED-1203-A when writing ▲

Depicting applications of Micro Switches in ships, planes, tanks, trains and motor vehicles, 16-millimeter sound all-color motion picture entitled, "Uses Unlimited," is now available for showing in war plants and industrial trade schools. Applications of this device for precision control of electric circuits in all types of equipment is covered. Issued by Micro Switch Corp., 205 South Chicago Ave., Freeport, Ill.

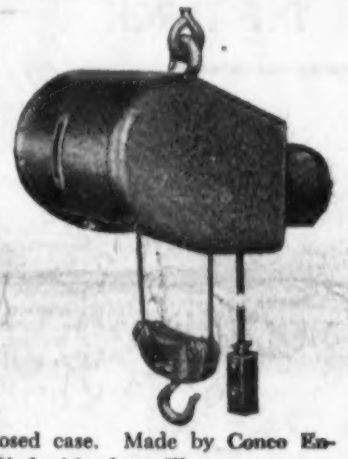
ELECTRIC HOIST

Available in 250, 500 and 1000-pound capacities, this line of improved Torpedo electric hoists is adaptable for all types of material handling operations requiring compact hoist which is easily moved from one location to another. Of double drum construction, it has push button control. It can be furnished for hook, bolt or trolley suspension. Solenoid brake assures safety of operation. Single-pole paddle type limit switch and protective housing are added safety features. Design is such that only two gear reductions are used. All gear shafts are ball bearing mounted and gears operate in bath of oil in fully enclosed case. Made by Conco Engineering Works, Bransau Blvd., Mendota, Ill.



▲ Mention Item NED-1205-A when writing ▲

SMALL ELECTRIC MOTOR

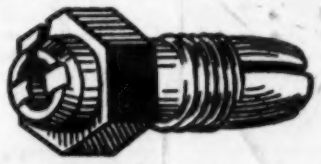
Primarily designed to operate blowers for cooling purposes in aircraft equipment, this direct current motor operates on 28 volts and draws 0.75 amperes to provide 1/80 horsepower at 8000 revolutions per minute. Light in weight and of approved design, it features fully enclosed, ball bearing construction. Weighing 17 ounces, it measures 3 inches long by 1⅞ inches in diameter. Basic design may be modified to meet other volume applications with either shunt or series winding for desired voltage, current drain and output up to 1/50 horsepower consistent with speed and duty cycle. Made by Alliance Mfg. Co., Lake Park Blvd., Alliance, O.

▲ Mention Item NED-1206-A when writing ▲

ANGLE DRILLING COLLET

Replacing usual collet employed for angle drilling, this Flute Key collet is so designed that small broken pieces of drills may be used instantly without soldering or swedging.

FRONT VIEW



SIDE VIEW

Self-locking device holds drill securely and in perfect alignment. Collet is particularly useful in reaching relatively inaccessible places with any angle drill. Vibration of tool in operation is claimed to actually tighten grip of collet. Made by Topflight Tool Co., P. O. Box 6728, Towson 4, Md.

with PLASTIC ROCK!

Trowel a smooth, tough, plastic surfacing right over your old concrete or wood floor.

Plastic Rock comes complete, packed in barrels. Nothing more to buy. No application "formula" to confuse you. Simply mix and trowel right over old floor. Average depth one-half inch. Old floor Saturday is a new floor Monday. Also patches concrete to a perfect feather edge. Plastic Rock is absolutely spark-proof, skid-safe wet or dry, dustless, silent. Feels like cork under foot. Cannot splinter, crack, crumble, curl or loosen. Heavy loads on steel wheels actually improve it. Five-year old floors show no wear. Natural color is dark gray. Also furnished in red and brown. Used by U. S. Army, Navy and largest industries in America. Your contractor or your own crew can apply.

THE TOOL THAT REPLACES THE TORCH

IT'S the Burndy HYTOOL . . . the easy-to-use indenting pliers which *indent* Burndy HYDENT connectors to wires merely by closing the jaws. It makes a small wire electrical connection quicker, *surer* and *stronger*, than by any other method.

Burndy HYDENT connectors, are *one-piece, pure copper* connectors. Thus, when firmly indented to wires with the HYTOOL, they provide connections of *maximum conductivity*, that are *on to stay!*

For electrical maintenance, as well as in manufacture, you can *lower installation and servicing costs*, and *improve circuit efficiency*, by using the HYTOOL instead of the torch. Why not send for the new HYDENT catalog, today?

Burndy HYDENT Connectors are available for all wire and cable sizes from #30 to 2500 mcm . . . and in types for all connection problems.

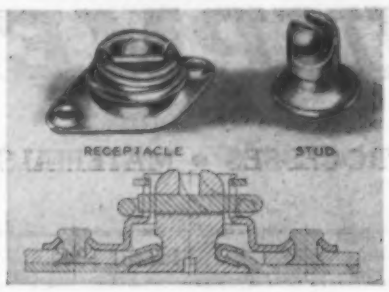
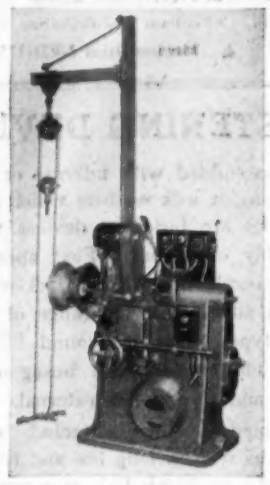
SPRING-LOCK FASTENER



Particularly suited for holding engine cowlings on aircraft, this light weight Spring-Lock fastener meets specifications of Army Air Forces and Navy Bureau of Aeronautics, it is claimed. It is also adaptable for such commercial applications as access plates on farm machinery, panels on motor trucks, home heating equipment or at any point where quick-acting, vibrationproof fastening is needed. Quarter turn of stud securely locks unit. Made by **Elastic Stop Nut Corp.**, 2350B Vauxhall Rd., Union, N. J.

▲ Mention Item NED-1211-A when writing ▲

BRAKE DRUM TRUING MACHINE

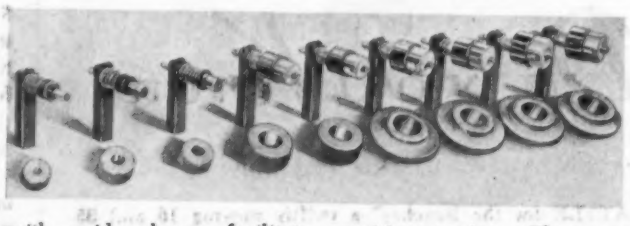


Designed to meet specific needs of military aircraft maintenance, this aircraft brake drum truing machine handles wide range of sizes. It is also adaptable for civil aircraft maintenance. Use of squirrel cage induction motor eliminates danger of sparks. Other features include magnetic starter switches, special cones to fit aircraft drums and silencers. Turret may be rotated to change from turning to grinding operations in about 30 seconds. Set-up need not be altered for either operation. Machine is available with or without hoist for handling drums. Made by **Lempco Products, Inc.**, 5756 Dunham Rd., Bedford, O.

▲ Mention Item NED-1212-A when writing ▲

INDICATING PLUG GAGES

Designed especially for checking small parts which are more easily gaged by passing part over plug, rather than introducing plug gage into part, this line of bench type indicating plugs



with guide sleeves facilitate precision gaging. They are mounted on small stand which can be clamped or fastened onto inspection bench. Guide sleeve serves to line up part concentric and parallel to gage. This speeds up gaging and reduces wear or damage to plug. Handle type indicating plug gages are also available with guide sleeves to prevent scoring or marking of gaged holes. Gages are made for use with air operated indicating columns. Made by **Metrical Laboratories, Inc.**, Dept. 21, 417 Detroit St., Ann Arbor, Mich.

LATHE COLLET CHUCKS

Available for 1½-inch 8-thread spindles with ⅞-inch collet capacity and for 2½-inch spindles and under with 1⅝-inch collet capacity, this collet chuck employs full circular, low pressure cam to activate collet closing mechanism and assures any required collet gripping pressure for various materials. Large area of cam is claimed to reduce pressure at any point 90 per cent as compared with mechanisms using high pressure pins, wedges or dogs. Component parts are precision hardened and ground to exacting tolerances.

But little pressure and short travel distance are required on operating handle when closing or opening collet. Handle travels at right angles to ways of lathe bed. One hand of operator is free to insert, feed stock or operate bed turret. Because mechanism is circular and balanced, it is adaptable to polishing lathes and other high speed spindles, as well as to standard lathes. Made by Allison Tool & Engineering Co., 4031 Whittier Blvd., Los Angeles 23, Calif.

MOBILE INSPECTION UNIT

Containing a complete set of precision gages and gage instruments normally found in inspection departments, DoALL mobile inspection unit provides accurate inspection at point of work on any job. Unit safeguards measuring instruments and can be locked up to protect instruments and records kept by inspector. Entire unit occupies but 7 square feet of floor space. Accuracy of instruments against wear, dirt and rough handling is quickly checked by using optical flats and monochromatic light included in unit.

Unit has all-steel construction which assures sturdiness and prevention of warp and twist. Rigid foundation is formed for working surface which is covered with heavy duty linoleum. Small ledge or bead ⅛-inch high surrounds rim of work table to prevent instruments from sliding off work surface. Unit is easily moved throughout plant on four rubber-tired caster wheels, which can be locked so that unit becomes securely anchored when in use.

Plug-in box is provided at back of unit to supply electricity for monochromatic light, electric comparator and magnifying glass. Box contains 50-foot extension cord that is secured to automatic take-up reel. Unit has desk drawer providing ample space for records. There is a pull-out desk so that operator can make notations, change notices and repair notices on spot. Collapsible chair is also furnished so that he can sit at desk in writing his reports. Unit is made by Continental Machines, Inc., 1314 Washington Ave., S., Minneapolis 4, Minn.

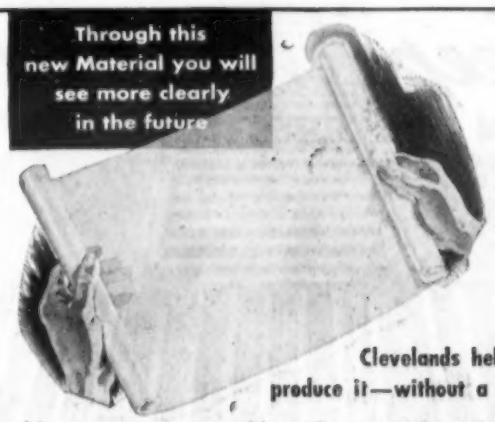
Through this new Material you will see more clearly in the future



Clevelands help to produce it—without a flaw

The machines must operate with uniform angular velocity. Even the slightest variation in speed will form a streak or ridge. Drives of another type failing to meet this requirement caused a high percentage of scrap.

The manufacturer has used Clevelands successfully on other applications for more than 20 years—so he installed them on this equipment too. Clevelands smoothed out the operation—quickly eliminating defective production.

You can depend on Cleveland Worm Gear Speed Reducers. Send for the Cleveland Representative—specify Clevelands for your new equipment.

½" DRILL
$32.50
With Jacobs Chuck

MORE DRILL for the Money

The last word in ½" capacity drills with every advanced feature. Powerful specially designed Universal Motor pours power thru triple reduction hardened steel gears. Forced air cooling prevents overheating. Housing is sturdy, light weight die casting. Self-aligning porous bronze bearings soak up oil like a sponge, release it slowly as bearing temperatures change. New type "In line" rear grip makes it natural to drill straight holes. One handle removable for close quarter drilling. Light weight (only 10¼ lbs.) means easy handling, yet it is so powerful that it will drill a ½" hole in iron with 300 lbs. weight on the bit. Jacobs key operated chuck. This is not a heavy duty production line tool, but it will give exceptional service to the garage man, maintenance man, contractor or installer.

PRODUCTION EXECUTIVES AGREE:
"No Reconversion from American Phillips Screw-Driving"

There's one sure thing in the plans of modern war plant executives . . . they'll never go back to the slow, slip-and-slash, high cost method of assembly with old-fashioned slotted head screws. They'll hold the gains they've made with American Phillips Screws which average better than 50% in assembly time, plus the elimination of rejected work and spoiled materials, thanks to the automatic alignment of the 4-winged Phillips Driver that stays with the tapered recess until the screw has been set up straight and tight.

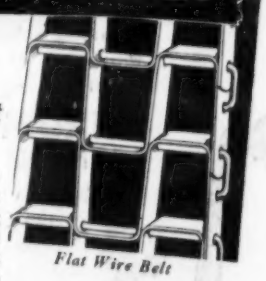
GOODS MOVE
SWIFTLY and SURELY

. . . on metal conveyor belts that last



Flat Wire Belt

CYCLONE Metal Conveyor Belts assure dependable, inner-plant transportation of goods. They're strong enough to carry heavy loads day in and day out. They're flexible. Water, steam or temperature changes will not harm them. These tough metal belts regularly carry parts or products through many operations where belts of other materials fail. They are now winning widespread favor for vegetable dehydrating.

U·S·S Cyclone Conveyor Belts are available in Chain Link or Flat Wire types—in a variety of widths, weights and size of mesh. Write for more information and prices.

HOT WATER GENERATOR

Oil burning and fully automatic, this hot water generator is designed for marine and industrial applications. Burner is fully automatic, foolproof and easy to operate. Diesel or lighter fuel can be burned under positive pressure which is supplied by low speed motor.

Heater is down-fired, with multiple pass over heat absorbing surfaces. Combustion occurs in Carborundum chamber through which flame has corkscrew travel. There are no negative drafts or smoke, eliminating need for special stacks. Burner is adjusted to burn correct amount of oil before shipment.

Type A units having 400 to 1000 square feet of radiation surface weigh only 300 pounds. Larger capacities from 100 to 4500 square feet equivalent direct radiation and up are available. Made by Air Devices, Inc., Dept. D, 17 E. Forty-second St., New York 17, N. Y.

IRON CEMENT

Effective repairs of broken, cracked or defective metal castings, piping or other parts may be made with Fix-Iron cement. This material may also be used for making joints, seams and loose parts secure, and for stopping leaks in boilers, firepots and other metal equipment.

Supplied in powder form, it is mixed as used with water. No heat is required. It is easily and quickly applied with putty knife or similar tool and may be hammered into cracks or broken parts. It hardens quickly and is claimed to have same expansion properties as iron itself, thus assuring tight, permanent joints.

Cement may be used on iron, steel, brass and other metals. It is also applicable to wood. It is available in 1¾ and 7-ounce glass jars, 1 and 5-pound cans and 25 and 100-pound kegs. Made by So-Lo Works, Loveland, O.

LARGE BAND SAW

Built for high speed, accurate, production service, model X-40 thirty-six inch band saw has one-piece cored cast frame which assures ample support without deflection or vibration at any speed. Motor base supporting 5 or 7½ horsepower direct drive motor is cast integral with frame. Conveniently located handwheel tilts table and pointer registers degree of tilt automatically, with positive stops at 45 degrees right and 5 degrees left.

Steel disc type wheels run at 900 revolutions per minute. They are dynamically balanced, with demountable and interchangeable rims and removable heavy steel-reinforced rubber tires. Blade is balanced by straining spring for shock absorption. Scale indicates proper tension for different blade widths.

Saw guides are roller type with deep groove precision ball bearings which permit high speed with minimum of wear. Mechanical foot brake of external toggle type has automatic cut-off switch which acts instantly when slightest pressure is applied. Spot welded steel guards fully enclose wheels and sliding guards enclose saw above roller guide and at back of column. Made by American Saw Mill Machinery Co., 195 Main St., Hackettstown, N. J.

DIEMAKER'S WIGGLER

Enabling tool and diemakers and machinists to make precision set-ups quickly and with extreme accuracy, this wiggler is equipped with three interchangeable shafts. These shafts are held by spring chuck which allows them to be interchanged without repeated adjustment. Proper spring tension is secured by turning knurled collar with fingers before inserting ball of any attachment. Thereafter shafts may be interchanged by snapping them into and out of chuck.

Ball shaft is used for indicating from ground or machined surfaces, from gage blocks and from side of round bars. Hardened and ground ball is 0.250 inch in diameter. In use, ball is first made to run true by holding blunt object against it while spindle is turning. Then it is coated with layout blue. Work is then fed toward ball until blue is barely wiped. Table is next lowered and moved 0.125 inch to bring reference surface directly under spindle center. Subsequently, by using micrometer collar on lead screw, any desired distance can be located within very close limits.

Bent shaft is designed to hold any type indicator, either on shank or in hole. It is used for locating from toolmaker's buttons or holes and allows ball of indicator to be positioned on any circle from center of spindle to diameter of 6 inches.

Needle-point shaft is used to find centers and true to layout lines in same manner as ordinary wiggler. Sharp, slender point is held in rigid friction grip and is replaceable as are points of other needle-point tools. Made by Nork Products Co., 5897 South Main St., Los Angeles 3, Calif.

Who Can Use This After The War?

We are now producing electric motors designed for jobs no regular motor can fill.

The jobs are on America's planes—working flaps, opening and closing shutters, lifting landing gears, etc.

Every ounce on an airplane is precious, so these motors are unusually light—the smallest weighs 8/10ths of a pound. But they also have big jobs to do—so the largest is able to move as much as 35 tons.

After the war you may have need for such a compact, ultra-efficient source of power. You may be able to use the kind of engineering thinking that developed it—or the production technique that builds it and about 250 other Lear products.

Simple – Accurate –

WEIR METERS

for Waste Measurement

Float-and-cable Weir Meters developed by Foxboro offer simple, accurate measurement of liquid flow. Widely used in sewage, chemical processes, and industrial waste disposal.

The Foxboro Weir Meter is extremely simple. Operates through motion of float connected with V-notch, rectangular or Cippoletti weirs - or Parshall flumes. Motion is transmitted by cable to accurate recording or integrating mechanisms. Direct-reading, uniform flow scale - copper, rubber-covered, or ceramic floats.

Write for detailed Bulletin A298. **The Foxboro Company, 134 Neponset Ave., Foxboro, Mass., U. S. A.** Also Montreal, Canada. Branches in principal cities.

NOW IS THE TIME TO THINK ABOUT MOLYBDENUM . . .

Taylor and White's great discovery which made possible high speed cutting was the greatest single development to help make mass production possible. The steel developed, commonly known as 18-4-1, served industry faithfully for over thirty years without a serious competitor.

In the early 1930's the first molybdenum high speed steels were used on a substantial commercial basis and, before the Second World War, about 25% of all tungsten high speed steels had already been replaced by molybdenum high speed steels on merit. This steady progress of logical replacement of the tungsten steels was interrupted by the war because of the tungsten shortage, when many industrial plants were forced to a sudden change to molybdenum steels.

Because of the stress of war production many concerns have never had an opportunity to satisfy themselves thoroughly as to the comparative merits of the molybdenum high speed steels. For those, in this category, who are inclined to return to the tungsten steels, we suggest a serious consideration of the following facts—molybdenum high speed steels perform as well as, or better than, tungsten steels—and they cost less.

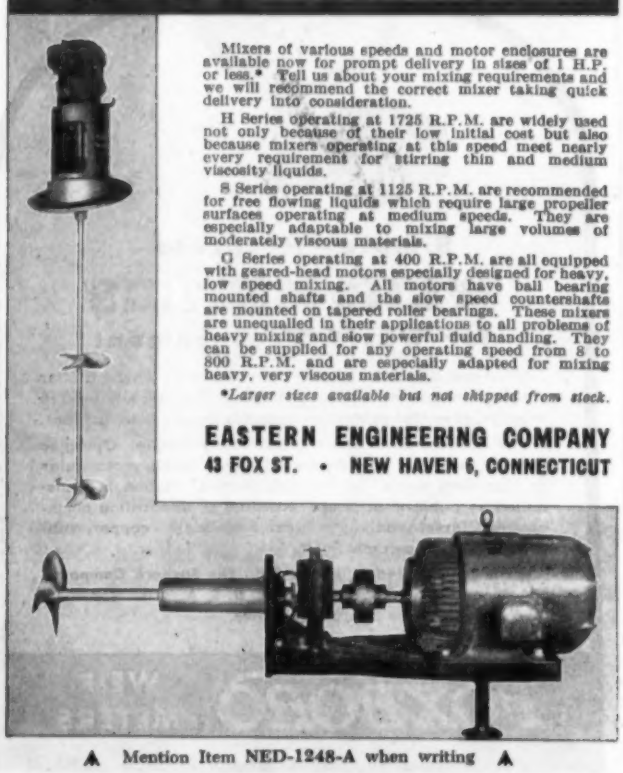
EASTERN PORTABLE MIXERS AVAILABLE NOW FOR PROMPT DELIVERY



Mixers of various speeds and motor enclosures are available now for prompt delivery in sizes of 1 H.P. or less.* Tell us about your mixing requirements and we will recommend the correct mixer taking quick delivery into consideration.

H Series operating at 1725 R.P.M. are widely used not only because of their low initial cost but also because mixers operating at this speed meet nearly every requirement for stirring thin and medium viscosity liquids.

S Series operating at 1125 R.P.M. are recommended for free flowing liquids which require large propeller surfaces operating at medium speeds. They are especially adaptable to mixing large volumes of moderately viscous materials.

G Series operating at 400 R.P.M. are all equipped with geared-head motors especially designed for heavy, low speed mixing. All motors have ball bearing mounted shafts and the slow speed countershafts are mounted on tapered roller bearings. These mixers are unequalled in their applications to all problems of heavy mixing and slow powerful fluid handling. They can be supplied for any operating speed from 8 to 800 R.P.M. and are especially adapted for mixing heavy, very viscous materials.

*Larger sizes available but not shipped from stock.

PLASTICS HEATING OVEN

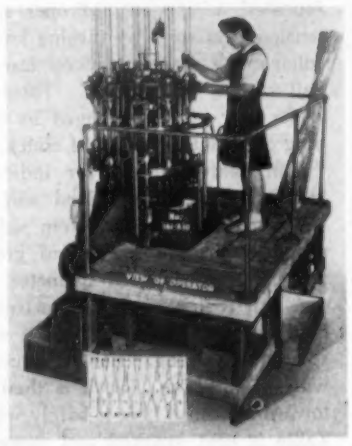
Designed for heating various sizes of Lucite, Plexiglas, Plastacele, Lumarith and other plastic sheets prior to forming into aircraft enclosures, this shelf-type electric oven is divided into four compartments, each having door hinged at bottom. Plastic sheets are placed on cloth covered boards which in turn are supported on expanded metal trays, large enough to hold 5-foot square of material or numerous smaller sheets. Loading and removal is facilitated because plastic sheets are laid flat during heating operation. Foot pedal aids in closing doors and prevents loss of heat.

Each compartment has two shelves. Positive cross-flow circulation is provided in oven by blower type fan and filtered fresh air intake. Only enough fresh air is admitted to create slight pressure in oven. Operating temperature range is 200 to 400 degrees Fahr. Any given temperature may be maintained constant by automatic control.

Heaters are installed in two banks, one manually controlled and used only to bring oven up to temperature quickly. Other bank is automatically controlled and is used to maintain desired temperature. Oven walls are insulated with 4 inches of industrial rock wool. Control equipment includes indicating controller, high limit switch and air-flow safety switch which shuts off oven in event of air flow failure. Made by **George Koch Sons, Inc.**, 2120 W. Pennsylvania St., Evansville, Ind.

▲ Mention Item NED-1250-A when writing ▲

AUTOMATIC AMPULE MACHINE



Capable of producing large ampules in wide variety of shapes, this ampule machine is fully automatic in operation. All operator does is place full 5-foot lengths of glass tubing into revolving chucks connected to slowly rotating spiders. Tubing passes three sets of burners properly located in machine which performs drawing, constricting and bottoming operations. After desired shape is attained, ampule is cut off and discharged to shelf. Before new turn starts, glass tubing is lowered by automatic releasing of tube-holding chuck.

Burners and chucks are adjustable for making different sizes and types of ampules. Tubes ranging from 18 to 35 millimeters in diameter can be handled. Approximate production of machine is 400 to 800 parts per hour, depending on size. Machine is driven by ½ horsepower motor. Operator can attend one or two machines simultaneously. Required gas pressure is 13 inches of water, air pressure 2½ pounds per square inch, and oxygen pressure 3 pounds per square inch. Made by **Eisler Engineering Co.**, 753 S. Thirteenth St., Newark 3, N. J.

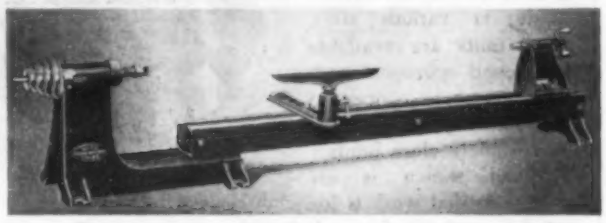
WOODTURNING LATHE

Proper speeds for woodturning and metal spinning operations are provided in this deep gap bed lathe by 4-step cone pulley. Fifty per cent greater face plate capacity is available



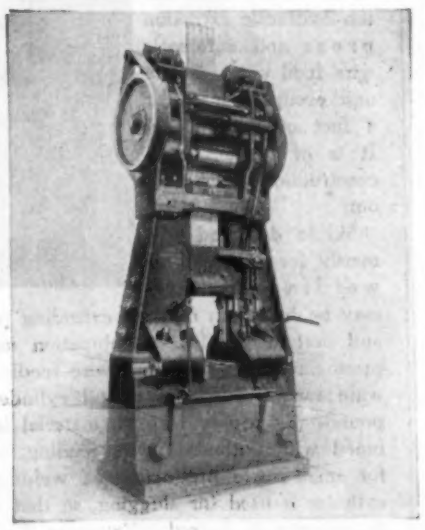
than with straight bed type machine. Capacity is 60 inches between centers, 11-inch swing over bed and 17 x 3 inches over gap. Sufficient distance is provided between centers to turn full length lamp pedestal.

Heavy cast iron head base and tailstock afford rigidity. Large spindle and use of oversize ball bearings throughout assure accuracy. Indexing device permits easy layout of circular work into any number of equal divisions. Tailstock spindle is graduated for boring to predetermined depths. All boring, reaming and milling operations are performed in master jig.

Live spindle has hole through it to permit chucking of long rods or dowels. Both spindles have No. 2 Morse taper sockets and tailstock has self-ejecting center feature. Made by **Boice-Crane Co., 951 Central Ave., Toledo, O.**

▲ Mention Item NED-1258-A when writing ▲

BOARD DROP HAMMER



Having self-contained motor drive, this four-roll board drop hammer has been designed so that it can be built in 10,000-pound size. Ram weighs 7500 pounds and anvil 150,000 pounds. On larger machine ram may weigh 10,000 pounds and anvil up to 200,000 pounds. Only other change required is slight increase in weight of friction bar and use of larger motor.

In this model, motors are carried on top of frame, thereby eliminating overhanging mountings. Motor is cushioned by metallic means and all gearing is fully enclosed. There is gear reduction between pulley shaft and roll shafts. While rolls are free to move in and out to grip and release board, center-to-center distances of gears and pinions do not vary, thus permitting use of involute tooth forms. Because of gear reduction, speed of pulleys is sufficient to provide considerable flywheel effect. High speed motors can be used.

Rolls are carried in pairs in equalizing frames which float free on eccentrics. This affords same pressure between each of four rolls and board regardless of wear. Made by **Erie City Iron Works, 1500 East Ave., Erie, Pa.**

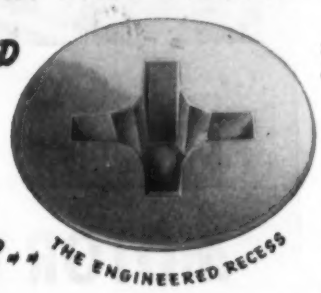
WHAT WAS THAT THAT JUST WENT BY? NOT A FOUR GENERAL BUT ANOTHER LOAD OF WAR EQUIPMENT THAT WAS PUT TOGETHER IN RECORD TIME SINCE ... THAT FAST-DRIVING RECESSED HEAD SCREW CAME ON THE JOB... IT'S PHILLIPS ...



THE ENGINEERED RECESS

Sure – the news is swell! But the war isn't over yet. The heat's still on and production speed is as vital as ever.

One of the surest ways to get more speed in your assembly operations is to put Phillips Recessed Head Screws in the hands of your workers. Hundreds of plants all over the country have standardized on the Phillips Screw – and the results have been spectacular. Driving speed has often been doubled. Vital man hours have been saved. Production has been greatly increased – thanks to the Phillips Recess which makes power or spiral driving practical.

Some advantages of Phillips Recessed Head Screws are listed here. Check them against slotted head screws – or any other type you may be using. You'll quickly see why it costs less to use screws with the Phillips Recessed Head.

AIR OPERATED CHUCK

Especially designed for holding odd shaped parts, this two-jaw compensating finger chuck features Air-grip operating mechanism. Made in various sizes, these units are available for second operation work which must be concentric with locating surface within extremely close limits.

Model shown is arranged so that work is located from finished round shoulder on bottom of casting and by two hardened and ground pins which also serve as drivers. Plate on face of chuck is hardened and ground. Two jaws are so designed that either one may pull in farther than the other to compensate for varying thickness of rough surface work pieces. Chuck body is made for direct mounting on any American Standard spindle nose, but it can be mounted on any spindle using adaptor. Made by Anker-Holth Mfg. Co., 332 S. Michigan Ave., Chicago 4, Ill.

▲ Mention Item NED-1267-A when writing ▲

EXTRUSION MACHINE

Designed to aid laboratory and experimental work in wide range of extrusion processes, this combination machine is composed of laboratory type 12-ton hydraulic extrusion press and automatic wire feed unit. Entire unit occupies only 2 x 4 feet of floor space. It is of welded steel construction throughout.

While designed primarily for extrusion of welding rods, press may be had with dies for extruding powdered metals, carbon and certain plastics. Combination unit is so designed that press can be sold without wire feeding unit. Machine offers wide range of speeds on oil cylinder. Pressure of 10,000 pounds per square inch on material is achieved, which combined with automatic wire feeding, makes machine suitable for small scale production of welding electrodes. Separate cylinder is used for slugging, so that slugs can be preformed in quantity if desired. Extrusion die-head is of new design at 45 degree angle. Deflection in wire guide is said to be minimized by this design because flux is forced in direction more in line with wire guide. This is claimed to eliminate some of trouble normally encountered in extruding with right angled die heads.

Unit is shipped complete, including extrusion die head, ready to set on laboratory or factory floor and to connect to power line. Hydraulic and electrical controls are located in panel at operating end with pressure gage with reading in direct pressure on extrusion cylinder always in view of operator. Made by Moslo Machinery Co., 2443 Prospect, Cleveland, O.

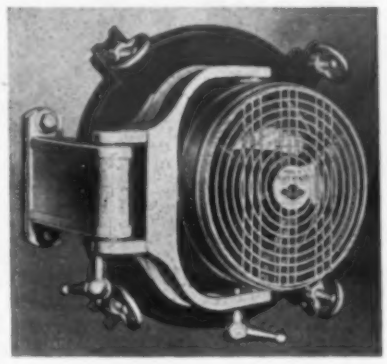
PORTHOLE VENTILATOR



Affording triple duty aboard ship, this Portavente unit fits quickly and snugly into porthole. In one position it pulls in outside air for comfort of passengers and crew. By means of hinged supporting arm, complete fan unit can be reversed 180 degrees easily to exhaust stale air, smoke or odors. Convenient handle facilitates quick changing of position. By third adjustment of supporting arm and hinge, fan unit swings back out of porthole and locks into any desired position for use as circulating fan.

For blackout protection, unit has weatherproof deadlight adaptor panel which fits into porthole and fastens with tumble bolts from inside. Panel is instantly removable when portholes must serve as escape hatches. Die-formed louvers prevent transmission of light with minimum restriction to air flow. Units are built to withstand shocks, stresses, strains and high winds encountered at sea.

Model A illustrated is designed for 16-inch portholes. Other sizes will be made available as they are required. Exhaust capacity is 350 cubic feet per minute, supply 360 cubic feet per minute and recirculation 660 cubic feet per minute. Drive is by totally enclosed, splashproof 1/80 horsepower direct current motor. Remotely located two-speed controller may be used to vary air circulation in accordance with needs. Made by Ilg Electric Ventilating Co., 2863 N. Crawford Ave., Chicago 41, Ill.

▲ Mention Item NED-1275-A when writing ▲

VOLTAGE REGULATOR

Developed for aircraft applications, series VR-2200 carbon pile voltage regulators are claimed to dissipate 300 to 400 per cent more power than conventional designs, occupying same chassis space and with 8 per cent less cubic volume. Units will handle 100 watts in pile with air flow through fins of approximately 25 cubic feet per minute and 50 to 75 watts without air blast. Piles can be provided with resistance range on order of 20 to 1, total range of maximum values being from less than 1 ohm to about 100 ohms.

Many different applications are possible. In one, resistance of carbon pile is in one side of line and regulator operates to vary this resistance automatically so as to produce constant voltage across load. In another typical use, regulator varies field excitation of inverter, alternator or special dynamotor so as to produce constant output voltage across load. Where machine is delivering alternating current, rectifier may be provided to supply regulator solenoid current. Made by Webster Products, 3827 W. Armitage Ave., Chicago 47, Ill.

Speedy Carburizing of Small Parts By The HOMOCARB METHOD

The parts shown above are "aircraft fasteners". They are formed by cold-heading, and after annealing require a carburized case, just thick enough to protect the screw-slot during the application of the fastener to the aircraft part it is to pin into place. This typical mass-production job of carburizing is an ideal one for the Homocarb Method, because Homocarb action is so uniform while the load is coming up to the soak temperature, that it can be quenched almost as soon as the soak is reached. The operation is speedy, and the fasteners emerge well inside the hardness limits, yet with no scaling or pitting.

Homocarb is equally applicable to deep carburizing of small or large parts. If you want further details, ask either for an L&N engineer or a copy of Catalog T-623.

GEARS... GUNS... AND MEN!

Today's victories of our armed forces are the result of their superior fire power on land and sea . . . and in the air — a superiority attained by design engineers working in conjunction with the army and navy ordnance departments. Victory and success depend on gun calibre and range . . . also its maneuverability and the clock-like precision of the firing mechanisms. . . . D.O.James precision-made gears are important controlling factors in attaining the maximum fire power and efficiency of many of the guns now being so successfully used by our armed forces. . . . Accurately conforming to these design requirements has been an every-day "must" in our organization for over 55 years in the design, engineering and manufacture of all types of gears and gear speed reducers.

YORK ELECTRIC

SCOTCH TAPE PRINTER

This machine is especially designed to print standard "Scotch" tape in a manner which makes it impervious to gasoline and oil. The printed surface is guarded against friction, and cannot be scraped or rubbed off. With this equipment in your plant, new codes may be set up by your own operators within a few minutes time. No troublesome delays in obtaining any combination of numerals or letters printed right in your own plant.

$175 to $375

New code markings for Aircraft wire terminals available instantly. This new Tape Printer, just developed for the Aircraft Industry, has met immediate approval.

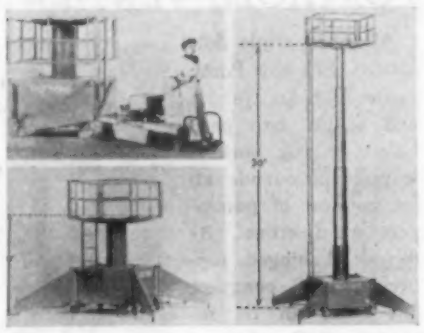
PORTABLE ELEVATOR



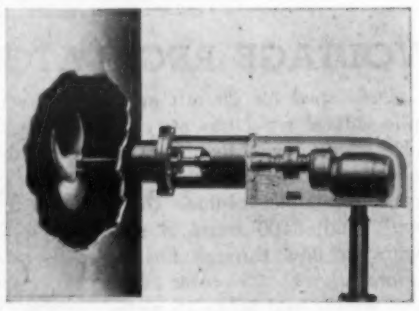
Capable of being set up for operation quickly anywhere inside or outside of buildings where electric power is available, this portable elevator will raise loads weighing up to 3000 pounds to height of 30 feet. Designed for heavy duty service, unit can be towed easily by small industrial truck and will pass through 6-foot wide aisle and doorway 8 feet high. Unit may be designed for heavier or lighter loads, if required.

Lifting speed is 20 feet per minute when loaded. Elevator consists of fabricated steel base housing hydraulic oil tanks, pumps, motors and controls; outriggers for holding unit stationary; telescoping hydraulic cylinders and 6 x 6 foot work platform. Outriggers are hinged to base and all four must be in extended position before elevating mechanism will operate. They remove load from wheels and hold equipment steady during use. Two front wheels are swivel mounted and all four wheels have Timken roller bearings.

Safety features including sealed valve which prevents operation of unit if elevator is overloaded beyond rated capacity. Simple 3-button switch on platform affords full control of elevator operation. Hydraulic cylinders will operate even when load is off center. Elevator guard rails may be lowered for passing through 6 x 8 foot openings. Made by **Hufford Machine Works,** 315 Diamond St., Redondo Beach, Calif.

▲ Mention Item NED-1287 when writing ▲

SIDE-ENTERING AGITATOR



Capable of being repacked from outside without need for draining of tank and without loss of liquid, this side-entering agitator is available in sizes from ½ to 30 horsepower. Unit has been redesigned so that all thrust is removed from motor bearings by means of roller bearings operating against ring attached to shaft. Use of undercuts prevents leakage from entering bearings, thus adding to their life and eliminating need for special lubricants.

Equipment is completely weatherproof, with all moving parts protected from the elements. It can be installed in exposed out-of-door locations without need for special housing. Motor and base are mounted integrally with agitator and unit has adjustable support under motor base. Hinged weatherproof cowl permits easy access for maintenance or checking.

External packing gland is used. Seal which is attached to shaft inside of tank may be drawn into seat, hermetically sealing off contents of tank. This permits repacking while tank is full and no liquid is lost. Tests made under much higher pressures than ordinarily encountered are claimed to have shown complete sealing of kerosene and other liquids. Made by **H. K. Porter Co.,** 4957 Harrison St., Pittsburgh 1, Pa.

LOOK---

WHAT CUSHION TORQUE WILL DO FOR YOU

These flexible couplings not only protect you against the evils of misalignment, but they also develop a long-lived CUSHION TORQUE that protects your Motors and Machines against the wear, vibration and fatigue that are the causes of most machine failures. No other coupling is like the KANTI-LEVER: it has a circular series of RADIAL RESILIENT CANTILEVERS made from 200,000 lb. steel. End thrust is impossible. Leverage on the Cantilevers decreases with increased load and prevents backlash. Special end play obtainable up to four inches without increase in Cantilever stresses. Outer periphery can be used as a brake drum for quick-stopping machinery. Over 3,000,000 H.P. in service. SEND FOR BULLETIN No. 28-D.

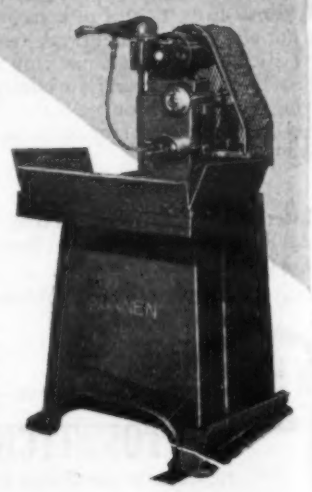
More Accurate Internal Finishes

in Less Time—at a Lower Cost—With the Sunnen Precision Honing Machine



This popular, low-cost machine is guaranteed to hone internal cylindrical surfaces to within .0001" and produce a super-smooth finish of 2 to 3 micro-inches. In actual practice, *accuracy has been held to within .000025" on production jobs.*

In addition, production has been increased *—in some instances up to 500%—*with fewer rejects and absolute interchangeability of parts.

Wide range—handles internal diameters from .185" to 2.625". Corrects errors of out-of-roundness or taper caused by previous operations. Facilitates duplication of sizes. Does not require skilled labor. Write for free bulletin.

SUNNEN PRODUCTS CO. 7931 Manchester Ave., St. Louis, Mo.
Canadian Factory, Chatham, Ontario

SUNNEN

Typical Jobs

Compressor Yoke. Alignment maintained and better finish produced.

Roller Bearing Outer Race. Finish improved from 12 micro-inches to 2 micro-inches.

Header Die. Life of header dies increased 3 to 9 times over lapping. Knock out pin breakage practically eliminated.

Shell Loading Die.

Aircraft Carbureter Operating Valve Sleeve. Sunnen honing eliminates distortion from assembling operation.

Stainless Steel Load Compensator Valve Seat. Hole is honed to .0002" limit.

Bearing. A very small part. 2 micro-inch finish necessary.

Hydraulic Control Bushing. Honing gives straight round hole after rough reaming.

Cast Iron Valve Stem Guide. ½ to one thousandth removed—220 pieces per hour. Better finish and straighter hole.

Aircraft Valve Tappet Roller. Honed after grinding to give 100% bearing surface.

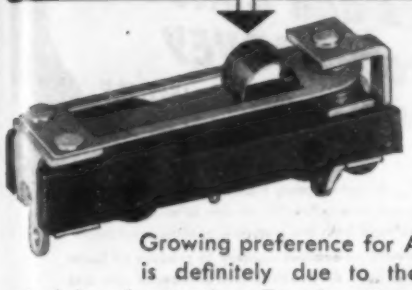
STUDY
THE ROLLING SPRING



The Greatest Thing in Snap Action Switches

Growing preference for ACRO-SNAP Switches is definitely due to the ROLLING SPRING principle of actuation. Two beryllium springs are locked together so as to compel one spring to "Trigger" the other. The contact break is more nearly instantaneous. Friction is eliminated and firmer contact pressure maintained. Approved by U. S. Army Air Forces after Winterization tests and adopted by leading builders of war equipment. Write for special bulletin on Model G. Midget.

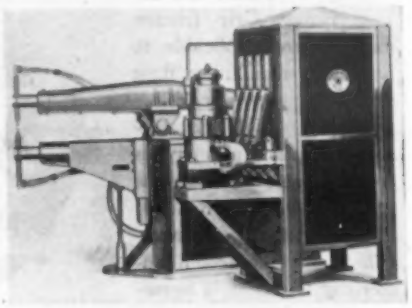
▲ Mention Item NED-1292 when writing ▲

BATTERY OPERATED WELDER



Claimed to be the first practical direct current resistance welder using storage batteries as power source, this machine is designed for industrial applications. Equipment is already in use, welding aluminum for aircraft. It makes possible application of resistance welding, even in aluminum, in localities where power supply limitations have prevented use of other forms of stored energy welding machines.

Advantages stated are elimination of inductive losses in welding "loop" by use of direct current; elimination of reactance losses between power supply and electrodes; less critical adjustments required to obtain consistently good welds, and operating and maintenance simplicity.

Rocker arm, pedestal and gun type or resistance welders may be used in combination with storage battery power unit. Power to keep batteries charged is supplied from normal power line which may be single or 3-phase alternating current. Charger is dry-disc type rectifier, equipped with automatic controls. Only simple non-synchronous sequence welding control is needed in conjunction with automatic pressure switch and starting foot pedal switch to control welding cycle.

In addition to operating advantages, high degree of safety is provided because of storage battery power. Equipment can be operated from conventional power lines instead of requiring thousands of volts as in condenser-discharge types. Made by **Progressive Welder Co.**, 3025 E. Outer Drive, Detroit 12, Mich.

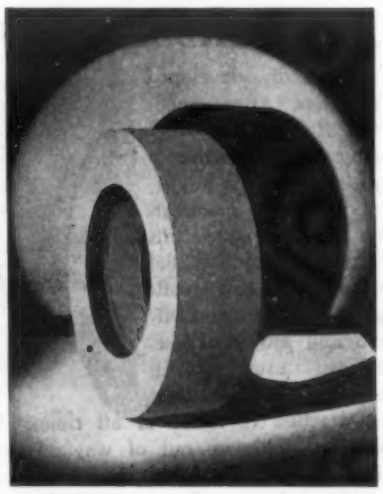
ALUMINUM OXIDE WHEELS



Now available for general use, 57 Alundum wheels are made with BE vitrified bond as well as standard vitrified bond in wide range of grain sizes, grades and structures. Because production facilities were limited at time these wheels were first successfully applied for cylindrical grinding, centerless grinding, internal grinding and slow speed snagging, they were not available generally. Production capacity has been increased so that use of wheels is no longer limited to critical war work.

Abrasive is more friable than regular Alundum. Wheels have fast, cool-cutting action because they tend to keep themselves sharp. They are claimed also to hold shape and require but few dressings. Wheel corners hold up well for such applications as crankshaft grinding. Made by **Norton Co.**, 200 New Bond St., Worcester, Mass.

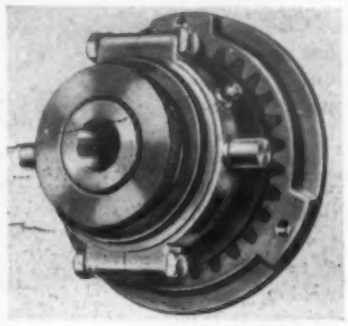
DISC TYPE CLUTCH



Easy to operate and adjust, Rolling-Grip friction clutches are applicable to packaging machinery, floor scrubbers, paper handling, wrapping, food processing, textile and other types of equipment where power requirements are relatively small. They are available with 3½-inch diameter disc rated at ½ horsepower at 100 revolutions per minute or 4½-inch diameter disc rated at 1 horsepower at 100 revolutions per minute.

In operation, number of highly polished hardened steel balls are forced into V-shaped groove by hardened steel cam. Forcing balls toward center of shaft widens groove. This application of basic principle of inclined plane or wedge produces heavy power transmitting pressure on friction surface. Wear parts are reduced to minimum.

Adjustment is controlled by threaded collar which is locked in place by two setscrews. With clutch engaged, two setscrews are loosened and adjusting nut is tightened up as firmly as possible by hand. Clutch is then disengaged and adjusting nut is tightened fraction of turn. Setscrews are then tightened to lock adjustment.

Clutch is easily adapted to any required operating condition. It may be provided with gear tooth friction disc and drive ring or with bolted friction disc for dry applications. If required to run in oil, asbestos fiber discs may be replaced with number of thin metal discs. Cam and thrust ring contours may be altered to change clutch characteristics. There are no exposed operating parts. Smoothly finished die castings are used for slip ring and drive ring. Made by Dodge Mfg. Co., Mishawaka, Ind.

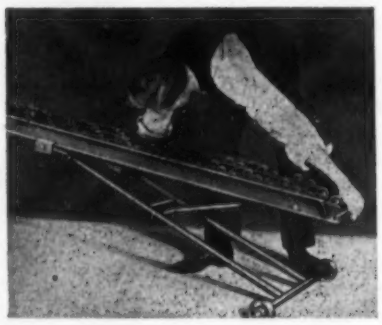
ADJUSTABLE CONVEYOR



Originally developed to meet Army needs for lightweight, fully portable conveyor which could be adjusted readily to practically any height, this Cam-lock Rapid-Wheel conveyor is now available for essential civilian and industrial use. Special cam locking standard is permanently attached to frame at all times. When not in use, this standard folds up out of way. When assembling conveyor line, it is only necessary to lift end of conveyor to required height and press down cam locking levers.

Conveyor section is self-contained and self-supporting. Standards support each section and are equipped with easy rolling wheels so that setting up line is simplified. Height may be set at any amount up to 50 inches, thus permitting practically any degree of pitch which may be required for gravity delivery. Made by Rapids-Standard Co., 8535 Bond Ave. N. W., Grand Rapids 2, Mich.

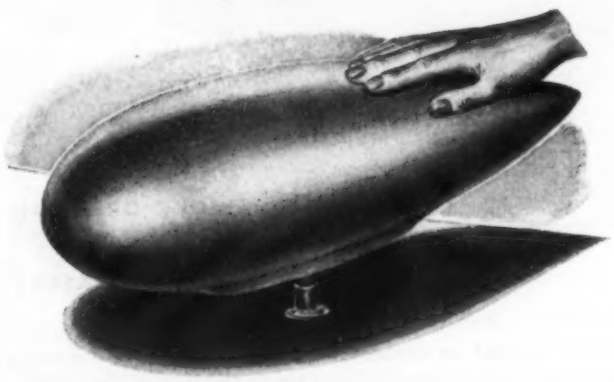
BAKELITE

TRADE MARK



"A CLOTH EGG" from which new industries may be hatched

WHAT APPEARS to be an egg in the illustration, is actually an aircraft antenna loop housing used on our military aircraft. It is made from cloth impregnated with BAKELITE Laminating Plastics, and formed to shape by a new process called *low-pressure laminating-molding*. Of particular interest to designers and engineers is the fact that it is a strong, one-piece, seamless structure, molded in inexpensive dies at pressures far below those usually required to fabricate plastics. This housing is one of a number of important war applications that forecast many new and important uses for plastics formerly considered impractical.

The antenna housing exemplifies the many advantages of low-pressure laminating-molding. Weight is reduced without sacrifice of mechanical strength and dimensional stability. Production is greatly accelerated, resulting in important economies. The molding of structures with compound curves is now practical. In this instance, an inflated rubber bag supplies the low, internal pressure required. As to service conditions, the housing withstands the air-blast, icing, constant changes in temperatures, and weathering to which today's fighting planes are subjected.

Write Department 16 for further information on the many advantages of this new low-pressure laminating technique to help you now in essential production, or to guide you in your planning for tomorrow.

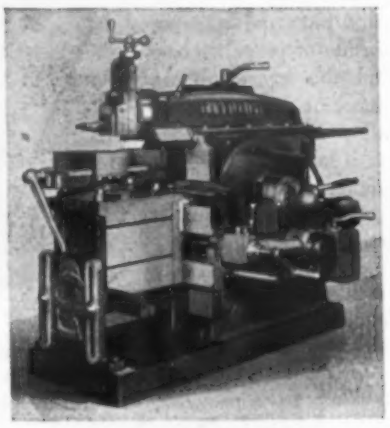
20-INCH SHAPER



Especially suited to heavy and general tool room work, this Super Twenty 20-inch shaper is readily adaptable to wide variety of machine shop work. V-type ram has wide bearings on both bottom and sides. Column is ribbed for sturdiness. All gears in speed train are hardened and shaved. Main two-piece bull wheel gear and back gear train are helical. Multiple dry-disc clutch requires minimum of attention and adjustment.

Feed range affords fine feed of 0.008 inch for finishing and hogging feed of 0.191 inch for heavy roughing cuts. Feed changes are accomplished by turning knob. Push button controlled high torque motor for power rapid traverse is standard equipment. In machining irregular surface it is not necessary to disengage feed to apply power rapid traverse. Electric limit switch in rail is safety feature, stopping both rapid traverse and main drive motors in case of feed overrun.

Standard equipment includes heavy duty vise with hardened steel inserts for jaws. Timken bearings are used throughout. Table is fully supported regardless of position. Made by **Queen City Machine Tool Co.**, 233 E. Second St., Cincinnati 2, O.

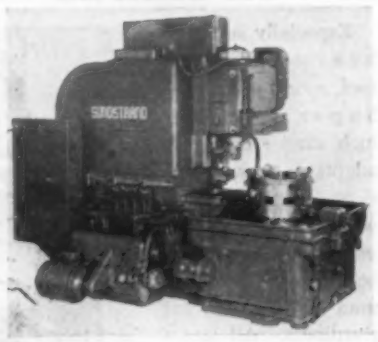
SPECIAL MILLING MACHINE



Designed to form mill radii and angle on inside of propeller barrel, this special milling machine is of heavy duty construction. Part is of tough steel and requires heavy cut on practically entire inside edge and bottom. Angular milling cutter with radius on bottom and using high speed steel blades is mounted directly on spindle which is driven by 10-horsepower motor. Drive to spindle is through V-belts with pick-off gears provided to furnish spindle speed changes in ratio of 3 to 1.

Column is of ribbed construction and, in addition to carrying vertical way surfaces for vertical travel of spindle head, it can be fed and traversed to and from workpiece. Workpiece is held in special fixture mounted on 22-inch diameter rotary table of solid spindle type with widely suspended bearings.

Automatic cycle provides three independent motions, cross feed to column, vertical feed to head and rotary feed to table, all timed and interlocked with starting and stopping of spindle and coolant flow. Hydraulic actuation of each moving member of machine is provided by fluid motor. Rate of table rotation can be varied infinitely from ½ to 10.1 inch per minute.

Similar machines can be designed for profile milling operations, rotary or contour and channel milling operations on connecting rods, housings and wheels. Made by **Sundstrand Machine Tool Co.**, 2574 Eleventh St., Rockford, Ill.

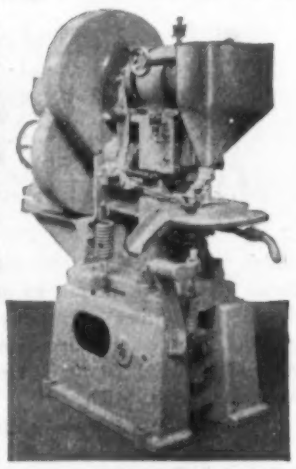
POWDER METALLURGY PRESS

Developed especially for powder metallurgy and dry pressing of ceramics, model T-4 high capacity press may be used to produce pieces up to 2½ inches in diameter with die-fill of 1⅝ inches at rates of 20 to 60 pieces per minute. Pressures of up to 20 tons can be applied from both top and bottom. Pressure adjustments may be made while machine is operating. This permits controlling of density of part within exact limits to assure uniform mechanical and electrical characteristics. For example, either desired porosity in oil-impregnated bearings or extreme density necessary in hard carbide tool bits is readily obtainable. (*Editor's Note: This description appeared Item NED-901, Feb. 1944 wrongly illustrated.*)



Features of this press include separate injection and compression levers; screw adjustment for compression; independent ejection cam; twin disc clutch and combined brake that starts and stops machine instantly, even under full compression load; variable speed drive to obtain maximum production with materials and parts of varying characteristics and size; and adjustable gibs to maintain close accuracy in punch and die alignment. Made by **F. J. Stokes Machine Co.**, 5964 Tabor Rd., Olney P. O., Philadelphia 20, Pa.

MODEL KV 195

ZIP WORK GRIPPED!

ZIP WORK RELEASED!

That's how fast Knu-Vise clamps operate.

Clamp is adjusted for required pressure when job is begun—never changes until job is finished. Operator simply flips lever to clamp work in position and flips lever back to release it.

Clamp shown above is of double action type. Movement of clamping bar is slower than that of handle, thereby developing a high ratio of pressure applied to work being held in position.

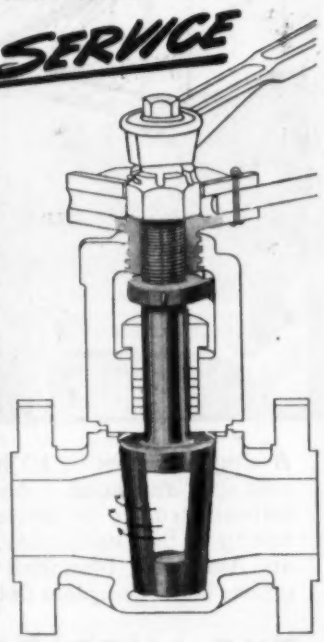
Protected Operating Parts give

HOMESTEAD LEVER-SEALD VALVES

LONGER SERVICE



Neither moisture from without nor contents within can reach the mechanism that makes Homestead Lever-Seald Valves stick-proof and so easy to operate. Line fluids never come in contact with valve seating surfaces except when a small area of plug is momentarily exposed during opening or closing; and any fluid adhering to plug is instantly wiped off as valve moves from one position to the other. Because all operating parts are thus protected, both internally and externally, Homestead Lever-Seald Valves give longer, trouble-free, lower-cost service. Homestead Lever-Seald Valves are made in metals and alloys to meet your service requirements in sizes 1½" to 10", for pressure ranges from 150 to 1500 pounds. Write for Valve Reference Book No. 38.

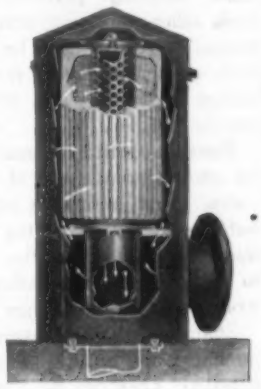
INTAKE FILTER

Design of this Staynew intake filter is such that it permits ground level installation with high level intake. It is recommended for air compressor use because outdoors air is usually cooler and high level intake placement avoids concentrations of dust and dirt frequently encountered nearer to ground. It is also applicable for serving internal combustion engines. Because of ground level location, it is readily serviced in all kinds of weather. It may even be placed in engine room with air intake opening located outside at most suitable point.

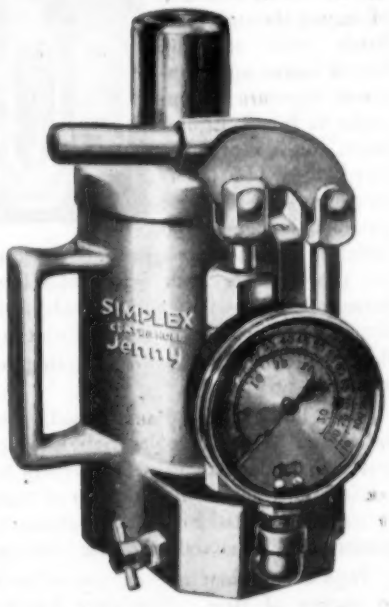


Features include radial fin construction and dry type filtering unit. Combination silencer and filter models are available. Servicing is extremely simple, as actual filter element can be lifted out through removeable panel, and either cleaned by brushing, by compressed air or by washing. Made by **Dollinger Corp.**, 11 Centre Park, Rochester, N. Y.

▲ Mention Item NED-1333 when writing ▲

HYDRAULIC PULLER

Reducing time required for production, maintenance and repair jobs, Simplex Jenny center hole hydraulic puller is adaptable for use in general industry, construction, ship building, mines, railroad shops and oil fields. It has been used for pulling in utility service pipe. Applications also include pulling bushings, cylinder liners, cutless bearings, pistons, wrist pins, valve seats, keys, wheels, sprockets, gears, boiler tubes and pipes. It may be used to pull structural members for welding or riveting.



This unit pulls, pushes or lifts, and can be rigged up as portable press. Being self-contained, it operates vertically or horizontally without need for heavy auxiliary equipment, and without side thrust or friction. It serves as its own back-up and is self-supporting because of center hole construction.

Five models are available, ranging in capacity from 30 to 100 tons. Light in weight in proportion to capacity, it is easily handled. Three models have single pumps and two have high and low speed pumps which may be operated separately, alternately or simultaneously. Alloy steel rods are recommended, as it will pull apart mild steel rods which will fit through center hole. Unit is built of heat-treated alloy steels to withstand heavy loads and service abuse. Made by **Templeton, Kenly & Co.**, 1020 S. Central Ave., Chicago 44, Ill.

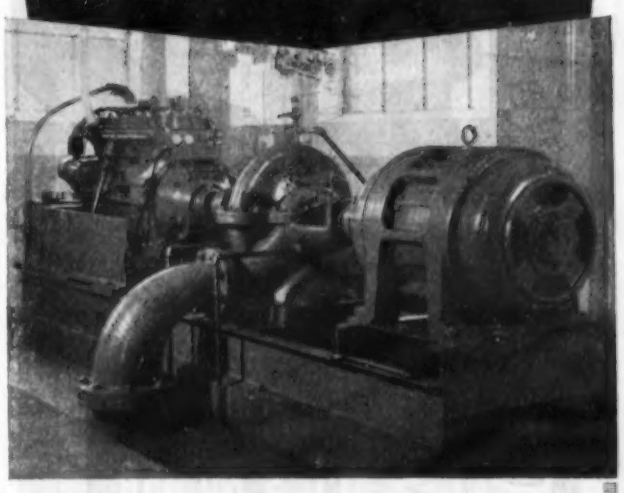
Diesel Stand-by Proves Itself Against Water Power!



This Fairbanks-Morse Diesel-driven pumping unit was originally installed as a stand-by. Actual operations soon proved it able to compete economically with water-powered pumps.

Now it's on the regular shift in the Franklin, New Hampshire pumping station. *That,* in this state, the nation's waterpower stronghold, is a significant tribute to Fairbanks-Morse operating economy.

Fairbanks-Morse Pumping Units Give You All of These Advantages

- Sound and Practical Design
- Rugged and Simple Construction
- Inexpensive Installation
- Economical Operation
- Low Maintenance Cost
- Reliable and Efficient Performance
- Longer Life
- Adaptability to All Conditions
- Higher Suction Lift
- Steady Flow at Uniform Pressure
- Reliable Engineering Service
- Standardized Parts Replacement
- Quality Control
- Protective Guarantee
- Purchase of Complete Unit from One Responsible Manufacturer

If you have pumping problems now, or if you are planning ahead . . . our engineers can help you as they are helping so many others. There is no obligation. Write Fairbanks, Morse & Company, 270 Fairbanks-Morse Building, Chicago 5, Illinois.

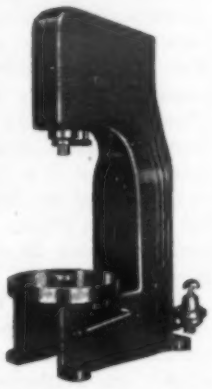
AIR-HYDRAULIC PRESS

Powered by normal compressed air supply line pressure which is multiplied by two hydraulic cylinders at ratio of 50 to 1, model 900 air-hydraulic press affords controlled pressure of from 1 to 5000 pounds. Many operations normally performed on punch, kick, arbor, stamping, trimming or other manual presses can be accomplished without fatigue. Work ranging up to 12 inches in diameter and 11½ inches thick can be handled.



Positive control of pressure is possible by simple adjustment of air regulating valve. Even pressure is applied throughout stroke. Quick acting hand or foot operated four-way valve may be used to minimize physical effort and enable women operators to run presses.

Stamping, riveting, assembly, forming, punching and cutting operations may be handled. Dies can be furnished for special operations. Made by Beyer Machine Co., Air-Hydraulics Div., Jackson, Mich.

▲ Mention Item NED-1340 when writing ▲

TANK LIQUID LEVEL GAGE

Level of liquid in all types of tanks is readily determined with this multiple duty, accurate Gaugit hand tank gage. Its use avoids necessity of gaging through open hatch with resulting loss of vapors and eliminates exposure of operator to fumes. Equipment consists of sampler-bob with thermometer, fingered tape guard and gaging tape which is reeled past sight glass on top of unit. Access doors are provided for both upper and lower chambers. Gaging valve, operated with knurled knob, isolates upper from lower chamber when closed. Base of unit has standard 125-pound flange which is drilled for mounting on standard 4-inch gate valve.

With both access doors closed, gager opens 4-inch gate valve and lowers sampler bob into tank, tape guard being retained inside gate valve to prevent valve being closed and cutting tape. When that portion of tape where level of liquid in tank is expected to be found comes into view in sight glass, gaging valve is closed to prevent escape of tank vapors.

Tape access door is then opened and gaging paste applied to section of tape. After door has been closed again and gaging valve reopened, tape is reeled out slowly until sampler-bob contacts bottom of tank. This opens upper valve in sampler-bob so as to take sample of contents as tape is reeled in. Gager stops reeling at point where gaging paste has been cut, takes reading and then wipes tape clean of paste. After access door has been closed and gaging valve opened again, sampler-bob is reeled in reclaiming tape guard from gate valve and until bob hits safety bumper in sampler housing. Gate valve is then closed, door to sampler chamber opened, temperature recorded and contents of sampler-bob drained into container or returned to tank. Made by The Johnston & Jennings Co., Oceco Div., 877 Addison Rd., Cleveland 14, O.

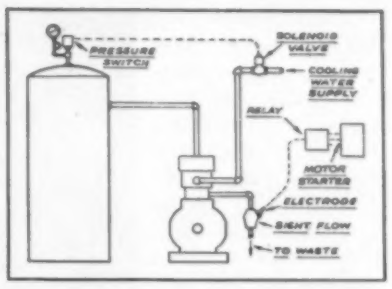
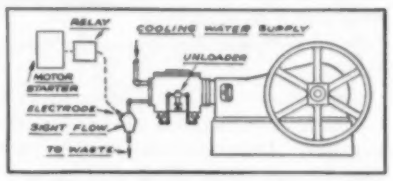
COMPRESSOR CONTROL





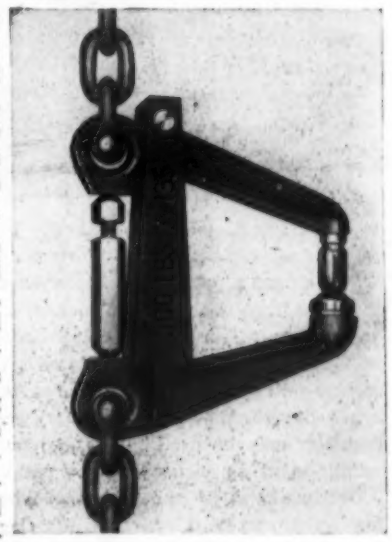
Preventing overheating and waste of water, this compressor control permits compressor to operate only when water is actually flowing. It thus guards against failure of water supply from any cause and consequently permits use of automatic water cut-off valves.

Control consists of sight flow fitting, mounted in water discharge pipe of compressor, which serves as holder for metal electrode. When pressure in receiver falls below predetermined level, pressure switch on receiver opens solenoid controlled valve to admit cooling water to compressor. Compressor is not started until water flows through it and into sight flow, completing circuit with electrode. This arrangement is designated type M. By supplying cooling water only while compressor is operating, water waste is prevented.

Control is also available as type U for use on unloading compressors. It insures that water is flowing before compressor starts and stops compressor or sounds alarm if water supply fails. Device is completely automatic and is claimed to be as dependable as the flow of electricity. It can be used on compressors of all sizes and can be adapted to practically all operating conditions. Made by **Johnson Corp.**, Three Rivers, Mich.

▲ Mention Item NED-1351 when writing ▲

HEAVY DUTY RELEASE LINK



Designed for use with heavy loads where positive, self-releasing action may be required, this Quartzoid bulb type release link has load capacity of 500 pounds. It is essentially a fire protection device used in gas and oil field, tank farms, refineries and chemical plants where self-releasing action of valves would check running fires. It is used on storage tanks for automatic release of "floating roofs" and on board ship for automatic jettisoning of inflammable deck cargo. Advantages of link with its Quartzoid bulb include: high load capacity, wide range of thermal ratings, extreme sensitivity and resistance to corrosion. Addition of this high capacity link completes line of release links having load capacities of 3, 20, 150 and 500 pounds. Made by **Grinnell Co.**, 251 Exchange St., Providence 1, R. I.

BRAKES MAGNETS LIMIT-STOPS MOTOR-CONTROL

▲ Mention Item NED-1359 when writing ▲

ELECTRIC WELDERS

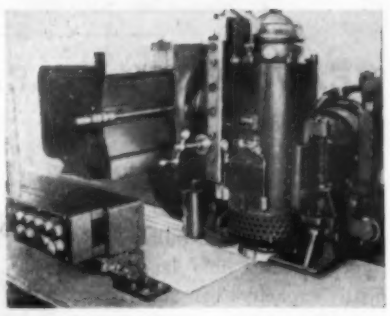
Improvements in type WD-30 series direct current, single operator arc welding machines include two new control dials and redesigned driving motor. Control dials permit welding current to be preset without aid of volt-ammeter and driving motor is designed to give exceptional resistance to weather when machine is operated outdoors.

One control dial is calibrated in terms of electrode size. Operator sets this dial to correspond to size of electrode being used. Other dial indicates range of welding current available for use under these conditions. Welding current is preset by moving pointer to whatever amperage is required. Clear, easily read calibrations facilitate quick, accurate operation of both dials.

Driving motor is equipped with heavier insulation than former motor, and has special weather-protective features. Enlarged air intake openings for ventilating air keep air velocity low enough to prevent rain and snow from being drawn in. Large baffle back of openings prevents water from splashing into motor. Insulation is highly resistant to deterioration from salt spray. Made by **General Electric Co.**, Schenectady, N. Y.

▲ Mention Item NED-1360 when writing ▲

PLYWOOD BEVEL MILLER



Large size plywood panels and veneer sheets which are beyond capacity of standard presses or other equipment are made up by scarf jointing of standard size sheets. This No. W-330 bevel miller is designed to cut, at high speeds, bevels for such scarf jointing operations. Bevels produced are wide and cut to precision flatness. Machine is large enough to hold any standard plywood or veneer sheet. Stock may be of any thickness from 1/16 to 2¼ inches.

Carriage which houses cutter motors travels over bed to mill bevel of any length required. Vertical cutter heads tilt so that mill cutters will machine in any plane from horizontal to 15 degrees off-vertical. Rotary cutters up to 7 inches in diameter may be used. With two motors, bevels up to scant minimum of 14 inches may be cut in single pass.

Sectionalized 40-inch wide bed is made up of as many 15-foot lengths as work requires. Carriage mounts two 10-horsepower, 3600 revolution per minute motors, as well as all push buttons which control machine's operation. Motors raise and lower to work through handwheel and screw action. Carriage feeds of 3 to 9 feet per minute may be selected while cutting. Rapid return feed of 18 feet per minute minimizes non-productive time. Made by **Onsrud Machine Works, Inc.**, 3956 Palmer St., Chicago 47, Ill.

YOU'RE ON THE SPOT

WHEN A TUBE BURNS OUT IN YOUR BLUE PRINTING MACHINE

Costly delays or expensive replacements due to burned out tubes are eliminated by the installation of POWERSTATS

Exacting control of input voltage on your blueprinting machines can be maitained by manually operated POWERSTAT variable voltage transformers, or by SECO automatic voltage regulators.

Longer life of tubes is assured; more efficient operation without delays or costly production shut-downs can be gained. Complete information promptly sent without obligation — ask for Bulletin 149 DN and 163 DN.

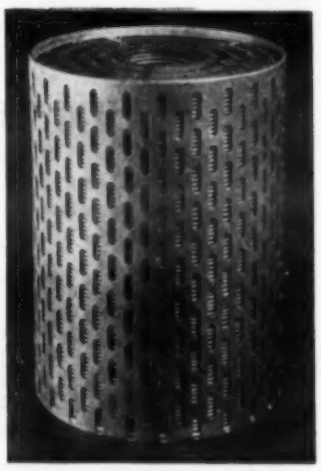
AIRCRAFT RIVETING HAMMERS

Affording power, perfect control, smooth operation and ease of handling, this line of slow hitting aircraft riveting hammers features two-finger trigger, metered air throttle valve, improved offset handle, balance and compactness. Arrangement of valve mechanism and porting reduces jarring and vibration to minimum and affords power in excess of rating.

Tool is available in two sizes with either conventional or offset handle. Model HA-19 has nominal capacity of ⅛ to 5/32-inch rivets. It weighs 2 pounds 5 ounces. Model HA-39 has nominal capacity of ¼-inch rivets and weighs 3 pounds. Both tools include as standard equipment conventional beehive retainer and adjustable air regulator. Nozzle takes standard Parker taper shank rivet sets 1⅝ inches long and 0.401 inch in diameter. Made by **Forss Pneumatic Tool Co.**, 1827 Broadway, Rockford, Ill.

▲ Mention Item NED-1368 when writing ▲

HYDRAULIC FILTER



Filtering particles of 5 microns and larger, Micronic aircraft hydraulic filter combines high capacity with fineness of filtration, light weight, low cost and design simplicity. It operates from minus 65 to plus 165 degrees Fahr. Filtering cartridge itself expands and contracts with varying temperatures encountered.

Model illustrated measures 6 x 8½ inches, weighs 2 pounds and has 3800 square inches of filtering area. Rated output is 1800 gallons per hour at 100 degrees Fahr. with pressure drop of only 16 ounces when filtering AN-VV-O-366a hydraulic fluid. Inlet opening is 1½ inches in diameter. Filtering flow may be arranged for either direction.

Automatic pressure relief is incorporated to bypass full flow of liquid at any predetermined pressure setting, should line surges peak beyond safe points. Filter operates in any position, however, generally accepted aircraft practice locates 1½ inch opening at bottom. Dural alloy is used for metal parts of filter, although tooling is so arranged to permit use of other alloys, such as stainless steels for food industry and other individualized applications. Filter is available also in 2 and 4-inch sizes with capacities of 450 and 900 gallons per hour respectively. Made by **Adel Precision Products Corp.**, Van Owen & Cleon Sts., Burbank, Calif.

WORK HOLDING FIXTURE

Designed to hold small flat work for toolroom use and certain other types of production operations, Flat Top work holder overcomes difficulties encountered in drilling, countersinking and tapping small precision parts in which highly accurate perpendicularity is essential. Fixture is instantly ready to hold any type of work which is flat on bottom, varying in thickness from few thousandths up to 2 inches and in area from size of dime up to several inches square. Peripheral contour of work makes no difference.

Holder is also useful for many operations on small shapers and bench milling machines. One of supporting plates is perforated and provided with three studs. This end of fixture is used for milling and shaping work. Two studs are set in position to locate back of work and third is set at end to support wark against pressure of cutting tool. Fixture may be changed for other set-ups by simple process of dropping three studs into three holes. Adjustment for work thickness is made by turning knurled head of ball joint stud. Made by Mead Specialties Co., Dept. 233, 15 S. Market St., Chicago 6, Ill.

AIR

the ECONOMICAL Way to Convey Many Materials

Pneumatic conveying (under pressure or suction) of bulk or granular materials is finding ever-increasing favor as a definite means of saving time—with the additional advantages of being cleaner and more sanitary.

The blower is the heart of the system, and must possess the ability to build up pressure or suction needed to keep materials moving in the conveying lines. That's why Engineers specify Roots-Connersville Positive Displacement Blowers or Vacuum Pumps. In addition to trouble-free operation, "R-C" units can be counted on to give unusually long service. We build blowers to meet any capacity and moderate pressure requirement, but do not furnish complete systems.

Only Ozalid gives this versatility

"THE OZALID MODEL B"

OZALID whiteprints are produced in two steps —Exposure and Dry Development.

Dry Development distinguishes Ozalid from all other Processes. It eliminates baths, driers and plumbing connections. And it allows the use of sensitized materials which would become distorted or wouldn't develop if other methods were employed.

WITH OZALID YOU GET THIS VERSATILITY

- Prints having blue, black, maroon lines on a white background.
- Transparent papers, cloth and foils which can be used to make "duplicate originals" of your valuable tracings . . . reclaim soiled originals . . . to eliminate drafting waste when making design changes.
- Cut sheets as well as roll stock may be used. You can eliminate trimming waste.
- All prints produced in same manner—no variations in production.

Ozalid whiteprint machines are designed for large and medium production. Also, Dry Developing units for use with your present printer.

Write for catalog and samples of Ozalid whiteprints.

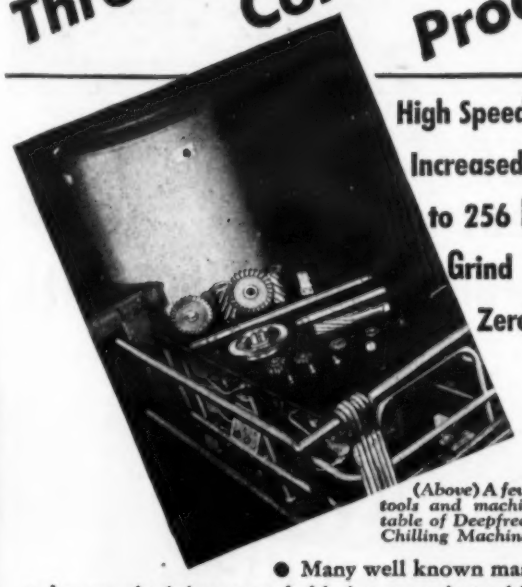
Proof of Increased Tool Life Through this New Cold Treating Process



High Speed Drill Life Increased from 48 to 256 Holes per Grind by Sub-Zero Treating

(Above) A few cold treated tools and machine parts on table of Deepfreeze Industrial Chilling Machine.

● Many well known manufacturers today are obtaining remarkable increases in tool life by cold treating high speed cutting tools in Deepfreeze Industrial Chilling Equipment. Among the many cold treating tests conducted by a large and prominent machine tool manufacturer is the treating of high speed drills used to drill four 11/32" diameter holes in a yoke lever part made from S.A.E. 4340 steel forging with the Brinell of 387. Using a special two-spindle opposed head machine, this operation is performed at spindle speeds of 450 r.p.m. with a feed of 5" per minute.

Before cold treating in a Deepfreeze, the best possible performance of these drills was 48 holes per grind. Now, after treating for two hours at −120° F. in a Deepfreeze Industrial Machine, the average results are 256 holes per grind, or an increase of over 500%.

This manufacturer now requires that every cutting tool that comes into the plant be cold treated before it is used, and also that all cutters be cold treated after sharpening to restore original hardness of the actual cutting edges that may be slightly softened during resharpening operations.

Find Out How You Can Use Deepfreeze Chilling Machines in Your Plant . . .

For the complete and latest data on the use of cold treatment of metals in industry today, get this new Deepfreeze Metal Chilling Booklet. It contains complete details, specifications and lists other applications of Deepfreeze Chilling equipment. Write for your free copy today.

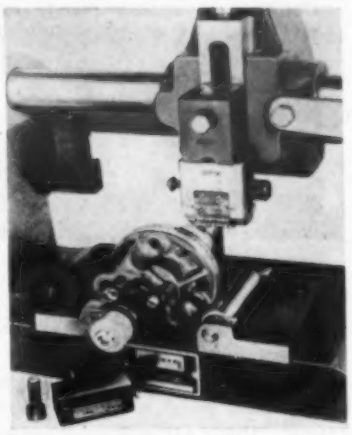
NUMBERING MACHINE



Use of combination numbering head and special fixture in No. 9A machine speeds up marking of curved surfaces on aircraft parts. Non-adjustable cradle rolls and socket type mandrel fixture permit marking of illustrated part at high speeds. One part is marked at forward stroke and another on return stroke. Changing of characters is accomplished by turning knob at right of numbering head and twirling wheels to desired irregular or consecutive numbers. Marking die may be substituted for numbering head. Made by **The Acromark Co.**, 7-11 Morrell St., Elizabeth 4, N. J.

▲ Mention Item NED-1385 when writing ▲

TRUCK TIRE

Available in 7.50-20 size, eight ply or larger, this Speedliner Silvertown truck tire has reduced tread thickness at shoulders and addition of ventilating grooves in shoulder blocks. These are claimed to lessen operating heat, while other improvements reduce danger of sidewalls cracking. Sidewall is thicker at base of grooves between shoulder blocks and ornamental rib on sidewall is constructed shallower to provide better distribution of stresses. Increased tire life is stated to be afforded. Made by **The B. F. Goodrich Co.**, Dept. E, 500 S. Main St., Akron, O.

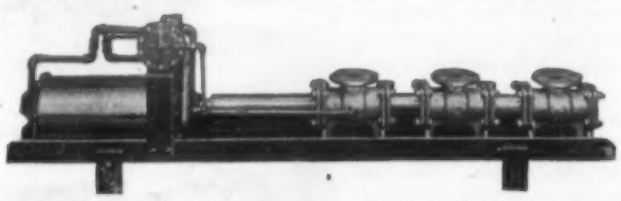
PIPELINE INTERCONNECTOR

Designed to deliver water from either of two inlets to common outlet, this Sure-Shift Interconnector is hydraulic valving mechanism. It makes standby water supply imme-



diately available without possibility of contamination. Choice of inlets is made automatically according to hydrostatic pressure prevailing at inlet customarily used. Should this pressure drop below predetermined point, usually about 20 pounds per square inch, water supply is automatically shifted to standby source. Upon resumption of pressure in customary source of water, supply connection shifts back to original position.

Protection against contamination at every point is assured through design. Uninterrupted supply of water is assured for all types of industrial or process operations. Public health requirements are met for public utility applications. Only three pipe connections are required. Hydraulic cylinder supplies motive power for automatic operation. Present size available is for 2-inch lines. Made by Industrial Interconnector Co., 2152 Niagara St., Buffalo 7, N. Y.

▲ Mention Item NED-1397 when writing ▲

COMBUSTION CONTROL

Applicable to boilers fired with coal, oil or gas, type P combustion control equipment provides effective and reliable regulation for smaller industrial and municipal power plant. This system continuously proportions fuel and air to steam demand, and at same time, controls furnace pressure. To regulate fuel-feed and draft, either forced or induced, system provides simple electrical balance, using Wheatstone Bridge principle by which settings of valves, dampers or vanes are varied in definite proportion to steam demand as directed by master controller. Remaining draft damper or other device is simultaneously regulated by furnace pressure controller.

If for any reason operator does not desire full automatic control, he can operate any drive units from push button stations. Without leaving panel, he can switch from full automatic control to base load control, and regulate air supply from single push button, with fuel supply automatically following in proper relationship and with furnace pressure automatic. He can, as easily, regulate both air and fuel from push buttons, with furnace pressure or he can switch to complete push button control and regulate each drive unit separately from panel.

Independent operation of drive units allows controllers to be serviced without interrupting boiler operation. Except for drive units, all equipment can be shipped on easy-to-install panel. Or if preferred, equipment can be mounted on complete boiler panel along with draft gages and other instruments. Drive units are connected to panel by simple conduits which any plant electrician can install. Made by Leeds & Northrup Co., 4934 Stenton Ave., Philadelphia 44, Pa.

HYDRAULIC FUSE

Designed to act as safety shut-off in event of ruptured or bullet-pierced hydraulic system, this quantity-measuring type hydraulic fuse is being used in military aircraft. Fuse remains open as long as hydraulic system operates normally. It prevents loss of fluid in system and also permits normal operation of undamaged portion of system.

Device operates successfully regardless of variations in either oil viscosity or rate of flow. Because of action of internal dashpot, flow rates as high as 20 gallons per minute do not affect basic functioning. It is not affected by back pressure, surges or large amounts of air which may be left in system because of incomplete bleeding.

Fuse capacities range from 10 to 40 cubic inches. Latter capacity will protect cylinder whose displacement is 40 cubic inches or less. It may be mounted in any position and fits directly in hydraulic lines leading to hydraulically actuated elements. Made by **Simmonds Aerocessories, Inc.**, 10 Rockefeller Plaza, New York, N. Y.

▲ Mention Item NED-1405 when writing ▲

SMALL INDUCTION MACHINE

Departing somewhat from conventional design of high frequency units, this 7½-kilowatt Tocco Junior induction machine features work unit separate from power unit. Mobile top may be removed, if desired, to facilitate shop operations. It is connected to power unit by cable which may be of any required length.

Equipment provides wide range of induction heating for brazing, annealing, heating for forming and for hardening small parts. It is particularly suitable for brazing of carbide tip tools and may be used as utility machine in shop tool room.

Housed in rigid welded steel cabinet, power unit is equipped with vertical 220/440-volt, 3-phase, 60-cycle motor-generator set which provides 9600-cycle high frequency power. Set is designed for continuous operation. Power or lower unit stands 30 inches high and houses motor-generator, cycle controls, air filters and operating meters. Timer is located on side with field control switches.

Work or upper unit houses high frequency transformer, condensers and panel to which work fixtures or inductor coils can be attached easily. For surface hardening, work unit contains quench valve, manifold and gage. Stop and start push button with signal light is located in upper right corner of unit. Weight of top is such that it can be transported without difficulty or fitted into production line without disturbing arrangement of line. If required, quench water can be brought to machine with garden type hose and drainage effected through similar connection. Made by **The Ohio Crankshaft Co.**, Dept. 3, 3800 Harvard Ave., Cleveland 1, O.

A New Art
OF FORMING FORMICA SHEETS

War has resulted in the development of new ways of forming completely cured Formica sheets. At North America Aviation where Plastic Engineer William Beech developed them, many parts, shaped in this way, are in regular production and use. Sharp bends can be made in the material without fracture. The inside diameter of the radius may be no greater than the thickness of the material. Formica so formed will not dent or deform under ordinary blows. It maintains its new shape under all conditions of humidity and climate. The parts are permanent, substantial and efficient.

LINK-BELT CAR SPOTTER

SPEEDS PRODUCTION IN PIPE BENDING

Prior to the installation of this No. 10 L-B Car Spotter the job of bending pipe was slow and tedious work, which was done by two men with a hand operated drum hoist. Now production has been stepped up with one man operating the motorized car spotter resulting in handling larger diameters of pipe than ever before—with less effort.

In every industry, thousands of L-B Car Spotters are in daily service moving cars and doing other back-breaking jobs quickly and easily at very low cost. Link-Belt Car Spotters are furnished as stationary or portable units in two sizes, with 5 or 10 H.P. motors, for rope pull of 5,000—and 10,000 pounds at a speed of 45 F.P.M.

Get the facts

ON BRAZING WITH PHOS-COPPER

Everyone interested in joining nonferrous metals needs a copy of this new 12-page Westinghouse Brazing Booklet—for it's jammed full of timely ideas for saving man-hours and critical materials. For example, there is an easy-to-understand explanation of proper joint design . . . and a pictorial page showing ten rules for better brazing.

This valuable new booklet also describes Phos-Copper, a Westinghouse brazing alloy for speedy joining of nonferrous joints. Physical property tables, Phos-Copper test and application photographs, and advantage and result charts are included in the discussion of this superior brazing alloy.

The Phos-Copper brazing booklet has proved so popular that our first printing (completed just this month) is almost exhausted. Don't be disappointed. Write for your free copy today. Ask for B-3201. No obligation, of course. Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa., Dept. 7-N.

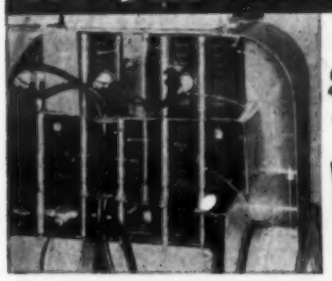
AIR in Abundance . . but it's SCIENTIFICALLY "RATIONED" for WISCONSIN ENGINES



The amount of air required for cooling the lower half of an engine cylinder won't do for the "business end", where the highly compressed fuel charge explodes.

With a continuous, large-volume air-flow to draw from, Wisconsin engineers have long since figured out just how much air to *ration* to each section of the engine, for most efficient cooling.

This is important in relation to the satisfactory performance of your power-operated equipment.

ENGINE DRIVEN ARC WELDER

Rated at 200 amperes, this Shield-Arc arc welding machine is driven by enclosed, rubber-mounted, 29 horsepower gasoline engine. Supplied complete with canopy and base, machine has current range of 40 to 250 amperes. Dual control of welding current is accomplished by adjustment of series field and generator speed. In addition to use with bare or coated electrodes, this model supplies uniform current for carbon arc welding.

Generator control or "job selector" assures accuracy of open circuit voltage and permits precise control of engine speed from 1500 to 1150 revolutions per minute. Control may be used also to reduce engine speed manually to as low as 750 revolutions per minute whenever it is necessary to stop welding for intervals of a few minutes. Rated current of 200 amperes may be obtained at generator speeds of as low as 1200 revolutions per minute. Made by **Lincoln Electric Co.**, Dept. AP-574, 12818 Coit Rd., Cleveland, O.

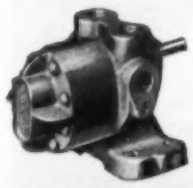
Why You Should Specify **ROPER**

SIMPLEST DESIGN. The Roper design is recognized as the simplest ever conceived. Only two moving parts . . . equal size pumping gears (either spiral or spur) operating at the same speed. Another important feature of Roper design is that all internal parts such as gears and bearings can be inspected without disturbing piping or power.

LONGER LIFE. The four large replaceable bearings, two on each side in Roper "hydraulically balanced" pumps are designed and constructed to withstand severe operating abuses and adequately handle peak loads. These flanged high lead bronze bearings also act as wear plates to protect face and backplate from wear. Can be replaced easily and inexpensively.

SAVE FLOOR SPACE. Roper Pumps are designed to operate at direct motor speeds, thus eliminating gears, belts, etc. Roper "direct-drive" pumps require only 48% as much floor space as other models.

POSITIVE DELIVERY. Roper Pumps produce a steady, positive flow absolutely free from pulsation.



HYDRAULICALLY BALANCED

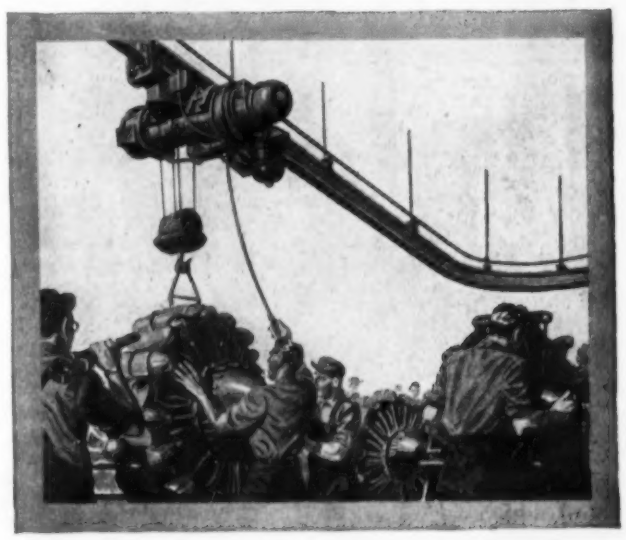
HERE IS AN ANSWER TO

The Long-Hours Slump



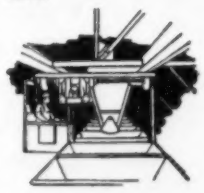
PHYSICAL fatigue slows production, spoils work and causes disruptive accidents. Anything that takes fatigue out of job handling helps to keep output rolling to the very end of each day.

That is why hundreds of important war plants have installed Louden handling systems. Motion studies show *handling* to be up to 90% of every production operation and when the bulk of handling is taken from men and given to Louden, production takes a jump, rejects are cut, morale improves and work attendance becomes far more regular.

Louden equipment handles anything from 10 pounds to 10 tons, takes materials from boxcars, flatcars and trucks, brings them to storage and stockrooms, supplies materials and parts to waiting machines, handles units in assembly and processing, through completion and out the shipping door. Not only do men work faster but three out of five men are often released for productive duties and women workers can take over with equal efficiency.

Louden systems use the ceiling, get handling out of the way of production, permit passageways to be filled with production equipment. Vitally important in war, they are economical and profitable in peacetime. Investigate Louden overhead handling today. Write for the free handling manual. The Louden Machinery Company, 543 W. Superior Avenue, Fairfield, Iowa.

Universal System of Handling
A wide range of track sizes, switches, transfers, etc., hand and power driven hoists, cranes, cab-operated hoists and cranes, make Louden systems tailored-to-need whether they serve entire factories or solve a single production bottle neck.



Answers to 3 Questions
1. Louden equipment can be installed while work goes on. 2. Louden systems serve every need from single rooms up to huge factories. 3. Standardized construction makes reasonable deliveries possible.

Free Manual
64 pages of facts, photographs, applications, savings, accelerated production and simplified handling. Write for copy today.

CORROSION RESISTANT MOTOR

Suitable for operation in atmospheres containing injurious dusts, corrosive vapors, gases and excessive moisture such as are encountered often in chemical plants, textile mills, food plants and mines, Sealedpower motor is available in sizes from 1 to 15 horsepower. It can be furnished for operation on any polyphase power supply.

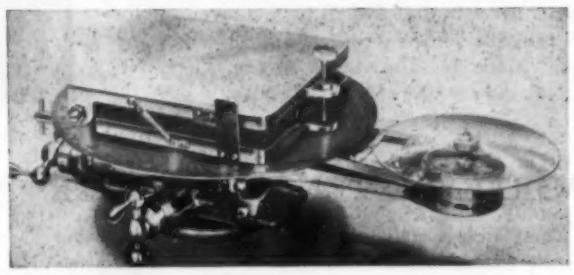
Motor is of totally enclosed, fan cooled type. Design departs, however, from previous models in that there are no cooling ducts to become fouled with wet or sticky dusts. All exposed parts are acid and alkaline resistant to high degree. In addition to mechanical sealing of entire motor, each coil is individually sealed against moisture, fumes, vapor and dust by vacuum impregnation process.

In laboratory tests, motor was operated on intermittant cycle while drenched in water for 48 hours without failure. In second test, fine chalk was introduced into test chamber for several hours without penetration into motor. Made by The Crocker-Wheeler Electric Mfg. Co., Ampere, N. J.

▲ Mention Item NED-1432 when writing ▲

QUARTZ CUTTING TABLE

Adaptable to any quartz cutting saw, this quartz orientation replacement table is used in positioning quartz to facilitate extreme accuracy in cutting crystals used in radio, radar,



sound detecting, locating and other electronic devices. It is used particularly in manufacture of crystal oscillators, and eliminates costly trial and error methods sometimes used.

Correction reading may be transferred directly from X-ray machines to 10½-inch degree dial on table. Minute calibrations on adjustments are visible easily and large enough to permit corrections quickly.

Table can be rotated 360 degrees and provisions are made for X correction with plainly visible and conveniently located scale and pointer. Table and mechanism are of chromium plated cast bronze. Adjustments are provided to compensate automatically for all wear. Spring loaded gears in gear train eliminate back-lash. Gears on sector arm and in gear train are meshed under constantly maintained tension to eliminate any inaccuracies due to tooth wear. Gear case is protected by Lucite cover to prevent quartz loaded coolant from entering.

Table can be anchored in position on saw table. Simple cross adjustments provide for horizontal positioning. Screw and scale provide for tilt adjusting of top plate. Made by Robert H. Clark Co., 9330 Santa Monica Blvd., Beverly Hills, Calif.

BENEFIT FROM B·O·T·H KINDS OF UNIFORM TEMPERATURE IN STA-WARM HEATING TANKS

There are two kinds of uniform temperature required for satisfactorily heating compounds. You want and need both kinds in every heating tank or kettle in your plant.

One is uniform heat *at all times*. Sta-Warm's accurate thermostats readily give you this essential uniformity.

The other is uniform heat *in all parts* of the tank at the same time. The broad coverage of Sta-Warm heating units on all sides as well as bottom of tank wall areas guarantee this equally essential kind of uniformity. There are no "hot spots", no "cold spots" in Sta-Warm tanks, kettles or pots.

So, think of Sta-Warm when you think of heating compounds, wax, solder, glue, pitch or resins.

Inquire today, stating your requirements.

Have You A Lime Scale or Rust Removal Problem?

PRACTICALLY every plant or mill has some type of steam-jacketed, water-circulating or water-cooled equipment. Consequently, you know how important it is to prevent lime scale and rust from building up and impairing the heat transfer efficiency of such equipment.

To remove these insulating deposits, Oakite Compound No. 32 provides a much SAFER method than the use of raw commercial acids, both from a handling and personnel standpoint. Because of its highly effective scale-dissolving properties, it quickly gets rid of accumulations that impede heat transfer and restores unit to practically normal operation efficiency.

28-PAGE MANUAL FREE

This helpful manual contains just the information you need to solve your lime scale and rust problems EASILY, QUICKLY and ECONOMICALLY. Write for your FREE copy TODAY.

TILTING WIRE REEL

Designed to ease operation of manually loading wire reels, this Powertilt wire reel is so constructed that women workers can load 250-pound coil of wire without assistance. Motor drive does hard work of elevating coil from floor up to working level. Turn of control lever causes motor to start and elevate loaded reel automatically. Motor stops when reel reaches upright position. Slight push against coil centers it and drop center is locked by throwing over U-shaped bar.

Drop center of unit eliminates need for lifting coil from floor during loading. Coil is merely rolled into position and tipped onto reel core. Safety of operator is assured at all times. In lowering reel to loading position, operator turns control handle. Motor shuts off automatically when in lowered position.

Power is furnished by standard NEMA 1/3-horsepower motor through V-belt drive to main gears which are enclosed in transmission and mounted in ball bearings. Reels are available to handle coils weighing up to 250 pounds with 18-inch minimum inside diameter, 36-inch maximum outside diameter and up to 12 inches wide. Made by F. J. Littell Machine Co., 4161 Ravenswood Ave., Chicago, Ill.

▲ Mention Item NED-1441 when writing ▲

AIR FILTER

Permitting use of larger number of filter lines for serving air tool operations at single point, this controlled compressed air filter has total of six outlets in manifold and self-dumping trap which automatically empties water filtered out of lines. This model augments two and three-way filters which company has had on market for some time.

Outlets are ⅜-inch to accommodate snap-on hose connections. Closed float guarantees positive opening and closing of discharge valve. Interior parts are heavily plated to reduce rusting to minimum. Trap is easily serviced. Self-dumping trap is standard equipment on all CCA filters having 1-inch or larger pipe connections. Smaller filters may be equipped with water trap if orders include this specification. Filter prevents dust, rust scale, oil, and water from entering valuable air tools; prolongs life and increases efficiency of pneumatic equipment. Orders can be filled immediately from stock. Made by **Filters, Inc.**, Dept. N, P. O. Box 471, Glendale, Calif.

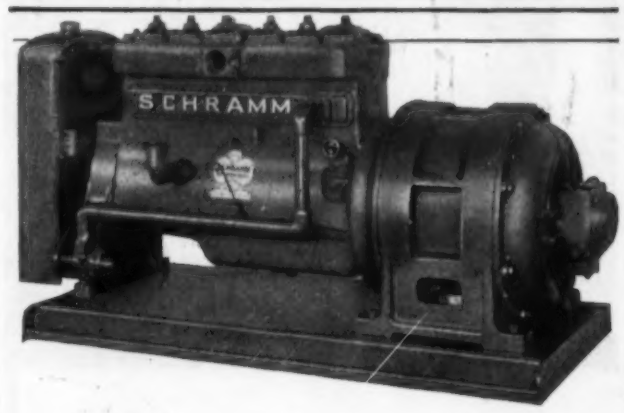
Why SCHRAMM COMPRESSORS are Water Cooled!



The basic system of any cooling system is simply to remove heat of piston travel and reciprocating parts from the surrounding metal as quickly as possible by the cooling medium. Heat travels from metal to water 200 times faster than from metal to air. By using water to carry heat away and by providing water jackets which completely surround compressor cylinders and heads, SCHRAMM achieves the following outstanding advantages:

...assured uniformity in cooling.

...elimination of unequal expansion and contraction which might cause distortion.

...absolute control of operating temperatures to the desired degree.

...longer life to compressor parts.

...higher efficiency of compressive cycle.

...higher compressor capacity at lower power cost.

...greater capacity in smaller overall space requirements.

...ability to provide compressed air efficiently under any and all temperature conditions.

...ability to provide compressed "air where it's needed," regardless of the amount of water available for cooling. SCHRAMM compressors are built in types equipped for re-cooling water (as well as for running water).

Get all the facts . . . **NOW!**

ROOF VENTILATING UNIT

Providing controlled ventilation with low installation and operating costs, this Wolverine roof fan is available in thirteen sizes ranging in capacity from 5650 to 45,275 cubic feet of air per minute free delivery. It may be used in new construction or to replace old style penthouse with louvers. It is adaptable to all roof types and is easily fastened over roof opening.

Propeller type fan of 12 to 20 blades, depending upon size, is V-belt driven by ball bearing motor. Fan wheel is also mounted on double row ball bearings. Unit is insulated against loss of heated air in winter or conditioned air in summer. Damper and duct turn in single unit to assure positive opening action when power is on and positive closing when power is off. Unit is easily serviced. Made by **Belanger Fan & Blower Co.**, 1234 Eighteenth St., Detroit 16, Mich.

▲ Mention Item NED-1448 when writing ▲

BUSHING CEMENT

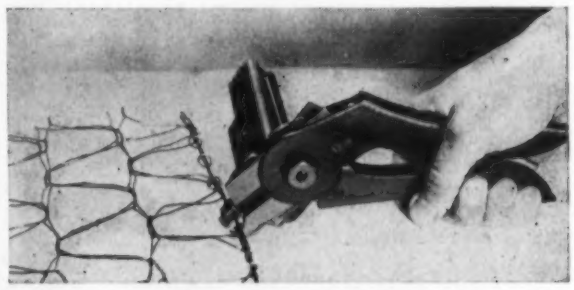
Although originally designed to cement transformer leads into porcelain bushings, No. 16-A bushing cement is also adaptable for use as permanent sealer for cable joints, instruments and other applications. This black compound has excellent adhesion to metal and porcelain, in addition to having very low coefficient of contraction. It becomes extremely hard and will withstand strain of rapid temperature changes. Being both oil and waterproof, it will prevent leakage and seepage.

Cement is homogeneous and retains uniformity during melting, thereby eliminating possibility of caking during melting process. Melting point is 265 degrees Fahr. and pouring temperature is 400 degrees Fahr. Made by **John C. Dolph Co.**, Dept. 37, 168 Emmett St., Newark 5, N.J.

▲ Mention Item NED-1449 when writing ▲

STAPLING PLIER

Wrapping staple around work in much same manner as conventional hog-ring plier but many times as fast, this magazine-fed stapling plier is now available in limited numbers



to civilian industries engaged in important production. It was orginally developed for armed forces for attaching strips of wire netting and fence wires. Tool applies 60 to 70 rings with one loading. Narrow jaws enable it to get into small spaces. Rapid, one hand operation speeds work. Weight is less than 2 pounds. Ring diameter is ¼ inch; ring overlap, ¼ inch; wire size, No. 16. Made by **Bostitch**, 143 Division St., East Greenwich, R. I.

NEW IMPROVED MONARCH UNI-POINT RADIAL SAW

VITAL PARTS OF HARDENED STEEL INSURING PERMANENT ACCURACY

Here you see the MONARCH UNI-POINT RADIAL SAW with ram housing cut away to show hardened steel ram riding on 32 oversize precision ground hardened steel roller bearings on hardened steel bearing ways — nothing to wear out. Saw table and base not shown.

Increase your production and enjoy greater accuracy and safety with UNI-POINT—saw blade always entering lumber at same point regardless of cross cut angle. Accessories are available for use with this machine to accommodate all common and many complicated woodworking production cuts—even scarfing, notch cutting, and dapping. Send for Catalog NE-12.

A New Method for Keeping Water and Oil out of COMPRESSED AIR LINES

● Compressed air cooled to lower temperatures takes out the "grief" of freezing air lines, water hammer, rapid wearing out of pneumatic tools or equipment, damage to sprayed coatings, and spoilage of products in which compressed air is used in process.

NIAGARA AERO AFTER-COOLER produces compressed air with one-half the moisture permitted by ordinary methods and provides controlled uniform air temperatures. Also, it controls jacket-water temperature and prevents the washing of oil out of the compressor cylinder, damaging the compressor and fouling the air lines.

It accomplishes these results with great savings of cooling water cost. For complete information, address: ED-34

SIX MONTHS' TEST PROVES

Boots Nuts Eliminate Periodic Tightening

"The sample Boots Nuts which you supplied have now been in use on several of our vehicles, both light and heavy, for a period of six months.
We selected two difficult spots for their application, drive shaft universal joint flanges and chassis spring U-bolts. At these points plain nuts are not satisfactory unless a lock washer or jamb nut is used to hold them. Even so, they require periodic tightening. The Boots Nuts in use have not required any attention since they were installed."
Signed,
United Parcel Service

A portion of the 2900-truck fleet of United Parcel Service trucks serving 16 metropolitan cities.

THIS report of a test made by the country's outstanding consolidated delivery company, operating in sixteen cities, is a clear-cut indication of the economies that Boots All-Metal, Self-Locking Nuts will effect in the transportation field after victory.

One piece, all-metal, Boots withstand the corrosive action of oil, water and chemicals. There's nothing to dry out, crack or shrink. Also, Boots Self-Locking Nuts can be used over and over without accelerated locking loss.

The ALL-METAL lock is built in here

ROL-TOP. This style nut, now used on all types of aircraft engines, is the type of Boots All-Metal, Self-Locking Nut mentioned in the above letter.

BOOTS SELF-LOCKING NUTS

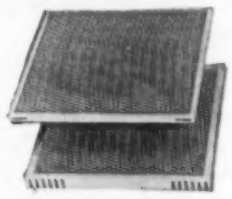
CLEANABLE AIR FILTERS

Having expanded metal filter mesh design which results in high efficiency and low initial resistance, Permo-Aire and Badger filters are of impingement type. Filters can be removed, cleaned and recharged in minimum of time. Vents in frame aid in quick cleaning and thorough draining.



Badger filter is available in 1 and 2-inch thicknesses and in sizes ranging from 100 to 600 square inches. It is designed especially for ventilation and air conditioning service, as well as other purposes where efficiency, large dust holding capacity and low static pressures are required. Arc welded frames can be provided with handles if necessary. Filters are fireproof.

Permo-Aire filters for extra heavy duty and industrial air cleaning services are supplied in 2 and 4-inch thicknesses with areas ranging from 100 to 1200 square inches. Filtering efficiency of as high as 98.5 per cent is claimed.

Permo-Aire grease filters for kitchen and galley ventilation remove kitchen fumes, avoid danger of grease fires, protect mechanical equipment and insure sanitation. Filter holding frames with Slip-Groove assembly and spring locking features are available in many standard sizes and shapes for applications requiring large filtering capacity in minimum of space. Made by **Air Devices, Inc.**, Dept. D, 17 E. Forty-second St., New York 17, N. Y.

RESIN INKING ROLLERS

Rollers of Lucite methyl methacrylate resin are replacing rubber ink distributing rollers used in off-set presses and duplicators. These rollers are durable and operate successfully in place of worn or scarred hard-to-replace rubber rollers. Precision machining and grinding method assures accurate dimensions required for proper performance.

Lucite, being clear transparent plastic, assures complete cleaning by operator. Plastic rollers may be used with "clean-up" attachments which are standard equipment on some duplicators. Rollers made by Lumirol Co., New York. Lucite made by **E. I. du Pont de Nemours & Co.**, Wilmington 98, Del.

WALLACE No. 1 RADIAL SAW

ALL-PURPOSE SAW for WOOD AND METAL

•

For cut-off, miter and rip work on Wood, Duralumin, Brass, Bronze, Steel, Glass and other refractory materials.

In the crating department, for plant maintenance work, for production sawing and cutting operations on wood, duralumin, metals, etc. the Wallace No. 1 Radial Saw is unexcelled. Material lays flat on table,—motor is moved back and forth in arm for cutting. Arm, column and motor all rotate 360° and can be set at any angle position for cutting. Motors to 2 H.P. Used with saw blades or $\frac{1}{32}$" thick abrasive wheels. Write for bulletins on this cost-saving machine *today*.

DESIGN ENGINEERS

CAN YOU USE A RESISTANCE MATERIAL in which *I varies as E⁴*?

Thyrite may be the answer to some of your circuit problems. It is a silicon-carbide ceramic material, dense and mechanically strong, having nonlinear resistance characteristics—the resistance varying as a power of the applied voltage. Its resistance characteristic is stable, and substantially independent of polarity or frequency. Thyrite* has been used for many years in important applications, including electronic. It can be produced in various shapes and sizes (those which can be successfully molded).

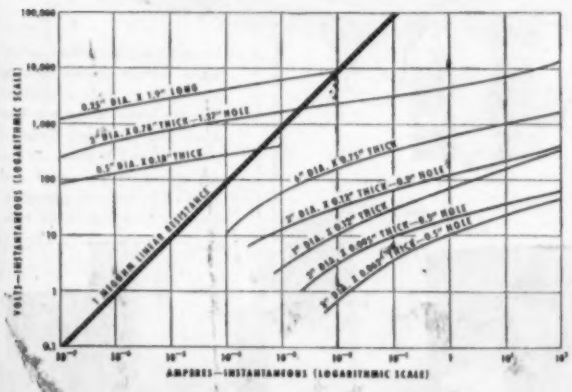
Some of its MANY APPLICATIONS

For protective purposes (to limit voltage surges).

As a stabilizing influence on circuits supplied by rectifiers.

As a potentiometer. (The division of voltage can be made substantially independent of load current.)

For the control of voltage-selective circuits, either independent of or in combination with electronic devices.



Typical volt-ampere characteristics of Thyrite resistors of several resistance levels and power ratings. Note that the nonlinear voltage-current characteristic extends over an extremely wide current range. Compare it with the characteristic (heavy line) of a 1-megohm linear resistor.

The nearest G-E office can tell you what data to supply as a basis for a quotation, or write to General Electric, Section 16-250, Pittsfield, Mass.

*Reg. U.S. Pat. Off.

DIAL INDICATOR SNAP GAGE

Filling important gap between conventional snap gage and high precision visual gage, this line of dial indicator snap gages includes twelve models, covering range up to 12 inches, with larger sizes supplied to customer's specifications. This device is particularly useful in checking work which is being brought down to size. Being as portable as conventional snap gage, operator can make comparator type of check without removing work from machine. It is also used for inspecting finished parts at bench and for classifying parts of such size and weight that they cannot be checked with other types of comparators.

Illustrated tool has large shockproof dial indicator which is graduated in 0.0001 inch. It is of balance type, plus and minus 0.005 inch and range per revolution of hand is 0.010 inch. When properly set, hand will make one and one-quarter revolutions in either direction, providing total range of 0.025 inch.

Anvils are lapped to gagemaker's tolerance. Adjustable anvil has maximum range of 1 inch. Gage frame is light in weight, yet is rigid and free from stresses. Serrated plastic grips on each side of frame facilitate its use and insulate gage against temperature of operator's hands. Made by **The Sheffield Corp.**, 1530 E. Third St., Dayton 1, O.

▲ Mention Item NED-1468 when writing ▲

COUNTING SCALE

Extra sensitivity is provided in this scale which is designed for quick and accurate counting of very small parts of uniform weight. Indicator travel per pound is nearly three times that of usual counting scale of this size. Small parts weighing as little as 3/64 ounce cause preceptible movement of indicator. No ratio charts or tables need be used.

Chart has zero graduation in center, with work "Over" to right and "Under" to left. Model shown is equipped with two 10-pound scale beams graduated in ounces. With these two beams, it can be used for weighing up to 20 pound loads in addition to counting. Counting capacity is 25 pounds.

Ratio-counting combinations include 99:1-9:1, which is particularly adapted to counting unknown number of parts or to issuing predetermined number of parts. The 100:1-10:1 ratio is especially suited to repeated issuing of same number of parts. The 72:1-12:1 ratio is designed for issuing predetermined number of parts in gross lots or predetermined number of dozens. In latter two, parts in two smaller scoops are not counted and may be left in pans for repetition of operation. Made by **Toledo Scale Co.**, P. O. Box 97, West Toledo Station, Toledo, O.

ANOTHER "WEAPON FOR PRODUCTION" *The* "MX" WHEEL

Pioneered and offered to industry exclusively by Carborundum

LESS than a year old, the "MX" Wheel is already making a name for itself as a "Weapon for Production." It is a free-cutting wheel capable of light stock removal and high polishing action at the same time. It requires but little pressure. It is used dry, since no coolant is required at the low cutting temperature developed.

Typical applications include breaking down burrs or sharp edges on gear teeth, finishing and polishing splines and hard-to-get-at flat surfaces, depressed areas and various types of undercuts.

These new wheels are made in six grades of hardness and in grits 50, 80, 120, 180 and 320. Diameters range from 1" to 12", and thicknesses from 1/16" to 3". More complete information will be sent on request.

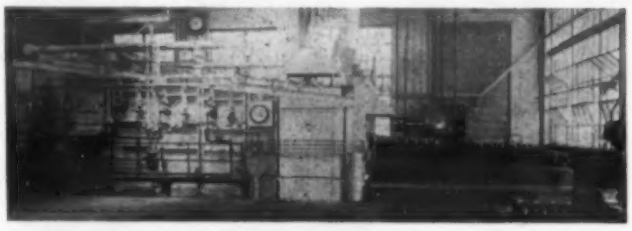
COPPER BAR FURNACE

Continuous heating of copper wire bars to permit coordination between heating and handling rate is performed with this continuous heating furnace. It is designed to synchronize



charging rate with rate of bar feed to mill. Illustrated furnace is about 22 feet long and 10 feet wide. It will handle two rows of 63 wire bars per row, each weighing 250 pounds, in heating time of 1¼ hours. Heating rate 25 per cent higher can be obtained if pushed. Production is thus approximately 25,000 pounds per hour. Fuel consumption is approximately 0.35 cubic feet of natural gas per pound.

Handling equipment consists of 20-foot charging table on which bars are placed, oil-operated pusher mechanism and two rows of water cooled skids for each row of bars. Gas burners are located on both sides of heating and soaking zones, and at discharge end. Auxiliary oil burners are installed in event of need for changeover. Automatic temperature control coordinates burner operation with flow of bars.

Skids and furnace chamber slope upward toward discharge, thereby permitting bars on discharge to slide on incline onto driven roller table, which conveys them directly into first pass of mill. Design prevents cold air infiltration and aids in better control of furnace atmosphere, producing relatively clean bars. Made by **W. S. Rockwell Co.**, 50 Church St., New York 7, N. Y.

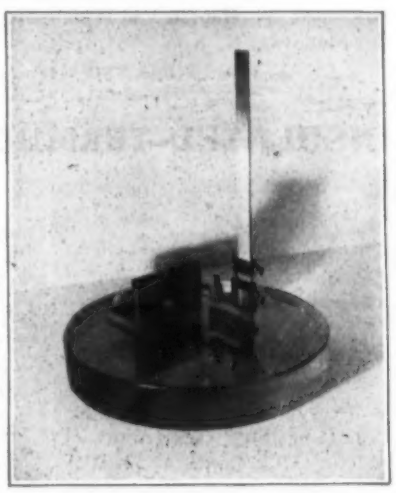
GLASS SURFACE PLATES



Flat to 0.00005 inch or less, Opti-Flat glass master surface plates are available in 12-inch diameters, 2 inches thick or 16-inch diameters, 3 inches thick. Optical polishing is used to obtain precision surface. Material has coefficient of expansion which is almost one-fourth that of plate glass or cast iron. If desired, highly polished wringing surfaces can be furnished, giving visible proof of millionth of an inch contact with Johansson gage block.

Features include corrosion resistant, non-magnetic structure and elimination of warpage. Scratches do not affect accuracy because there are no burrs. Also available are toolmaker's knees which are accurate to 30 seconds of angle. These are made of low coefficient of expansion glass with face sizes of 2½ x 4 and 2½ x 3 inches. Made by **Binswanger & Co.**, Precision Optics Div., 655 Union, Memphis, Tenn.

HEAT TREATING FURNACE

Rapid and effective tempering or drawing small parts is accomplished with this model 128 heavy duty oil bath furnace. It may be used to relieve stresses set up by quenching or to bring about change in grain structure. Gas fired, these units are heated by immersion tubes for thermal efficiency and quick pick-up. Super-power burners are completely enclosed, but are readily accessible through door at front of unit.

Thermostatic control assures accurate temperatures. Indicating regulator is mounted conveniently on instrument panel. Furnaces may be equipped with right or left drain boards, pitched so that oil flows back into bath. Square or cylindrical baskets for holding parts to be treated are available for use with furnace. This same design is available in variety of sizes. Made by **Stanwood Corp.**, 4819 W. Cortland St., Chicago 39, Ill.

▲ Mention Item NED-1486 when writing ▲

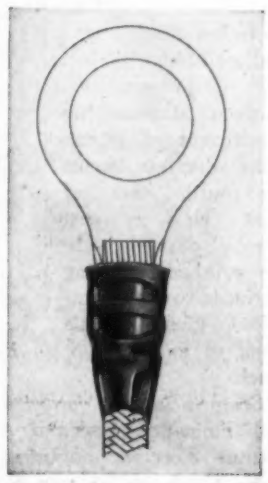
WATER DE-IONIZER

Purified water to replace distilled water, produced at low cost, can be obtained through de-ionizing method. Process will produce de-ionized water to fit any chemical or industrial purpose. De-ionized water containing from two to ten parts of dissolved solids per million is comparable to single distilled water and is suitable for electroplating operations. Process developed by **Hanson-Van Winkle-Munning Co.**, W. Church St., Matawan, N. J.

▲ Mention Item NED-1487 when writing ▲

INSULATED TERMINALS

Having insulation permanently bonded to copper so that it cannot be removed, AMP Diamond Grip insulation support terminal is of solderless type. Pre-insulation eliminates need for stocking and applying insulating sleeving to crimped terminals. Only single operation is required to firmly crimp terminal on wire with precision installation dies. Pre-insulation follows contour of crimp without distortion, cracking or drying out in use.



Identification of terminals and matching dies is made easy by marking each of two sizes with distinctive color; red for terminals and dies for wire sizes 22 to 18 and blue for wire sizes 16 to 14. Made by **Aircraft-Marine Products Inc.**, 1591Y N. Fourth St., Harrisburg, Pa.

WELDON ROBERTS
Brightboy
REG. U.S. PAT. OFF.

Made in 3 textures for a wide variety of applications, BRIGHTBOY represents a *combination* of abrasive and resilient rubber. The rubber in Brightboy cleans and polishes, while the abrasive de-burrs and finishes.

The resiliency of the rubber and its relative softness—unlike harder abrasive forms—*cushion* the abrasive action. Combined with the abrasive, the rubber does an all-in-one job that eliminates the step-by-step operations between a grind and a buff, and frequently serves as the final polish.

BRIGHTBOY requires no special preparation before use. It is made in wheels and rods for use on grinders, lathes, drill presses and polishing machines, and in blocks with flat or curved surfaces for use on parts worked by hand. Methods and Applications are explained in an attractive booklet obtainable together with catalog and prices from your dealer or from us. Brightboy field representatives are at your service.

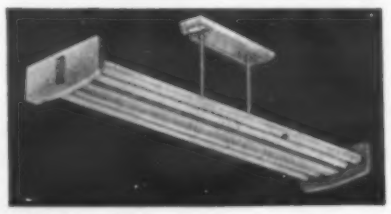
COMMERCIAL FIXTURE



Using four 40-watt fluorescent lamps, model No. 2044 commercial fluorescent fixture provides cool, comfortable, economical lighting. Containing less than 6 pounds of metal, it conforms to latest WPB regulations. Mounting may be suspension or surface type, individually or in continuous rows. Metal tracks fastened to ceiling with toggle bolts permit fixtures to be slid into place. Metal wireway channel and end pieces are finished in high-gloss chip-proof white enamel. Ample knockouts are provided.

Unit is completely wired, ready for hanging. Standard Tulamp ballasts, starters and sockets are used. Underwriters' Laboratories approved, this fixture has power factor of over 90 per cent and there is no stroboscopic effect. It operates on 110-125-volt, 60-cycle alternating current. Higher voltage units are available. Made by **Mitchell Mfg. Co.,** Dept. N-2, 2525 Clybourn Ave., Chicago 14, Ill.

▲ Mention Item NED-1493 when writing ▲

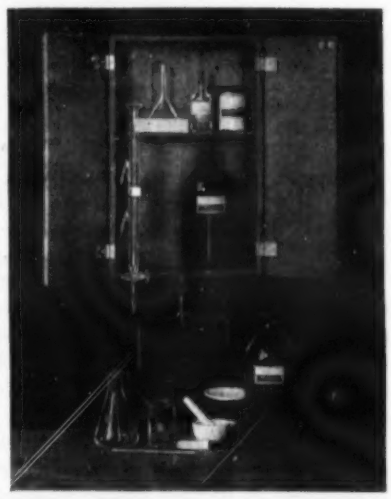
FIELD-COIL COATING

Providing tough, hard coating impervious to moisture, acids or alkalis for use on stator field-coils on electric motors, Insl-x will not chip or crack. Use of this coating makes it unnecessary to tape coils after winding. All that need be done is to secure corners tightly. Tendency of material to contract when drying will provide sealing coat that holds wire as in vise and prevents vibration or shifting.

This compound is particularly desirable for aircraft because its thin coat requires less space and involves less weight than standard insulating materials. For coils which are pre-shaped, Insl-x No. 33 should be used; where shaping is done after insulation, No. 11-6, a more flexible material, is required. Made by **Insl-X Co.,** Dept. NED, 857 Meeker Ave., Brooklyn, N. Y.

▲ Mention Item NED-1494 when writing ▲

CYANIDE BATH TESTER



Designed specifically to determine quantity of sodium cyanide in molten cyanide mixtures used in heat treatment of metals, analytical set DCN may be used by non-technical employes. Sample is drawn from bath by means of dry steel rod and portion of this sample is dissolved in water and checked with solution provided in set. Direct reading is obtained, giving percentage of sodium cyanide in sample without further calculation. All items and apparatus in set fit into compact cabinet. List price is $22.50. Made by **Kocour Co.,** 4724 S. Christiana Ave., Chicago 32, Ill.

TAPPING MACHINE

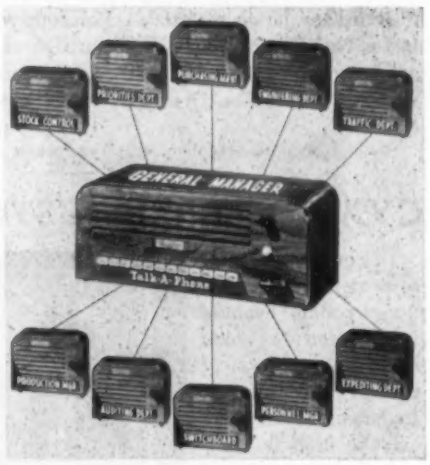
Complete manufacturing rights for Bakewell tapping machines have recently been acquired by Warner & Swasey Co. This precision threading and tapping machine will tap or cut threads at speeds required by mass production and is capable of holding threads to class 5 tolerance.

Hardened and ground lead screw controls feed of tap as it enters work. Upper portion of lead screw is hob having same pitch threads as screw itself. Thus, hob cuts into brass guide fingers which are brought into engagement against lead screw, fingers being actuated by solenoid mechanism. Prolonged tap life is claimed to be assured by safety clutch which is adjustable to safe torsional resistance of tap and type of material used. If tap becomes dull or strikes chips in blind hole, cork-insert disc clutch releases instantly.

Machine will cut either right or left hand threads internally or externally in plastics, aluminum and its alloys, magnesium, bronze, nickel and stainless steels. Made by Warner & Swasey Co., 5701 Carnegie Ave., Cleveland, O.

▲ Mention Item NED-1506 when writing ▲

COMMUNICATION SYSTEM



Enabling executive to coordinate entire plant by having all departments within easy communication reach, No. C-410 Coordinator intercommunication system consists of single master station working with up to ten or more substations. Master station may be used to communicate with one, two or all outlying departments.

Silent feature may be used to shut out at master station all sounds originating at substation locations, yet it permits substations to call master station at will. Extra power can be provided for certain locations where high noise levels exist. This extra power may be used as required by pushing button marked "Power".

Equipment operates on 110-115 volts alternating or direct current. System is also available for additional substations in multiples of 10, thus making possible any required hook-up. Made by Talk-A-Phone Mfg. Co., 1207 W. Van Buren St., Chicago 7, Ill.

TORIT Dust Collectors SELF-CONTAINED UNITS

▲ Mention Item NED-1512 when writing ▲

X-RAY FILM ILLUMINATOR

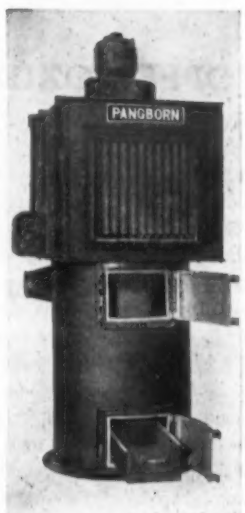
Facilitating accurate observation of detail, this high intensity illuminator for viewing industrial X-ray films provides four times more illumination than heretofore available. Illuminator also permits finger-tip adjustment to any desired brightness for films of different density or for different parts of same film.

Intensity of light is obtained from Photoflood lamps which, because of their heat, would curl and damage films and even crack glass front of conventionally designed illuminator. This damage is avoided by cooling system using built-in fan to blow air between inner heat resisting glass and outer flashed opal glass front. Foot switch control causes lamps to be "on" only when actually in use. This control greatly prolongs lamp life and eases strain on eyes of observer.

Special feature of illuminator is high intensity spot, just 3 inches in diameter, giving four times brightness of large section. Glass front of spot is water cooled, with light from lamp passing through four inches of water. Illuminator made by **The Kelley-Koett Mfg. Co.**, Covington, Ky.

▲ Mention Item NED-1514 when writing ▲

INDUSTRIAL DUST COLLECTOR



Adaptable for all types of industrial applications involving smaller air volumes and where self-contained unit is indicated, type CK unit dust collectors are available in three sizes with capacities of 1000, 2000 and 3000 cubic feet of air per minute. They are suitable for all dry dust control applications within their rated capacities.

Two-stage separation reduces filter surface wear to minimum. Preliminary centrifugal section precipitates bulk of dust, reducing loading on secondary cloth screen sections. Ample cleanout facilities are provided for both filtering sections. Exhauster of steel plate type is direct connected to motor. It is mounted on top of unit for accessibility and handles only cleaned air. Discharge may be arranged in any of four directions.

Magnetic starter is provided for exhauster motors and hand switch for screen shaking mechanism. Controls interlock to prevent simultaneous operation of both motors. Electrical timer can be furnished to operate shaker motor automatically for short time each time exhauster motor is shut down. Unit is easily installed, requiring minimum of piping and wiring. Made by **Pangborn Corp.**, 140 Pangborn Blvd., Hagerstown, Md.

Proved on Critical War Jobs

Developed by Norton research several years ago, 57 Alundum abrasive was an immediate and outstanding success in wheels for cylindrical, centerless and internal grinding. Limited production facilities, however, made it necessary to restrict the use of the new wheels to those critical war jobs for which their characteristics were most needed.

Now increased production capacity makes it possible to offer Norton grinding wheels of 57 Alundum abrasive for all jobs.

57 Alundum abrasive combines the fast, cool cutting action typical of 38 Alundum abrasive with the durability and toughness of regular Alundum. Thus these new Norton wheels stay sharp longer and hold their shape better. Dressings are few and heavy cuts without burning are possible.

Your Norton abrasive engineer will be glad to tell you just where 57 Alundum grinding wheels will help you.

ELECTRONIC TESTER

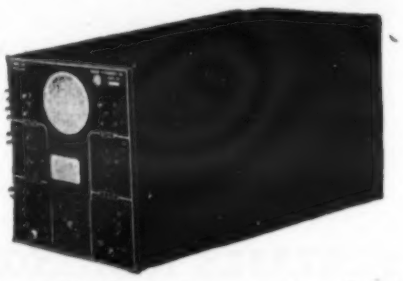
Designed to save engineering time in laboratory and to speed production testing, model 663A electronic multitester combines vacuum tube direct current volt-meter, alternating current voltmeter, ohmmeter and capacity meter in single instrument. Features include twenty-seven vacuum tube operated ranges, VR 105-30 voltage regulator tube, thirteen alternating and direct current voltage scales measuring from fraction of volt to 6000 volts, high voltage test leads, radio frequency lead, signal tracing probe, and resistance and capacity lead.

Wide scale on 4½-inch D'Arsonval microammeter permits easy reading. Meter burn-out affords protection. Included are pilot light indicator and matched pair of multiplier resistors which is accurate to 1 per cent. Welded steel case is thoroughly shielded and accommodates large capacity batteries. List price is $55.50. Made by **Radio City Products Co.**, 127 W. Twenty-sixth St., New York 1, N. Y.

▲ Mention Item NED-1532 when writing ▲

OSCILLOSCOPE

Designed to make measurements of higher frequency devices possible, model 556 oscilloscope is equipped with direct reading voltmeter for measuring input signal. Unit has 5-inch wide screen. It is made for work on higher frequencies as well as standard ones.



Sweep generator has frequency range of 1000 kilocycles, 20 cycles to 1 megacycle. Horizontal amplifier as well as vertical amplifier is practically flat to 2 megacycles. Z axis amplifier, which is useful up to 6 megacycles, permits blanking and marking. Special comparison voltmeter is incorporated to further increase usefulness of instrument and requires no additional equipment to determine value of signal. Deflecting plate connections are available at front panel. All controls are located at front panel and are conveniently grouped according to their function. Price of unit complete with tubes is $455. Made by **Reiner Electronics Co.**, 152 West Twenty-fifth St., New York 1, N. Y.

SO THAT PLANES FIGHT SOONER

Ransome pavers are rushing airports along our battle fronts.

Paving is a shattering job. And frequent take-ups and tightening used to be part of paver maintenance.

But no more! Not since Ransome began using Elastic Stop Nuts—the nuts that stay put.

Now the paver keeps on the go longer, and our planes fight sooner.

The reason Elastic Stop Nuts hold tight in spite of wracking vibrations lies in the elastic collar in their tops. This snuggles close around the bolt threads, grips them and prevents the nut from turning and loosening.

Countless fastening problems lie ahead in the coming days of peace. Many of them will be solved successfully with Elastic Stop Nuts.

If you are faced with a fastening problem, our engineers will gladly help you solve it and suggest the proper Elastic Stop Nut.

Baer FIBRE FABRICATIONS

...for dielectric advantages!

The excellent electrical and mechanical characteristics of BAER phenol fibre and vulcanized fibre fabrications are both diversified and numerous. High dielectric strength, resistance to the deteriorating effects of electrical arcing, ability to withstand vibration, shock and impact are some of the advantages.

These factors, plus the BAER facilities for machining, stamping, punching, drilling, sawing, etc. to strict specifications, will efficiently and economically meet your fibre fabrication needs.

New 16-page CATALOG on *Aircraft* RELAYS and ACCESSORIES

★ This 16-page catalog gives operating characteristics, dimensional drawings, wiring diagrams, and general construction information on aircraft relays, contactors, solenoids and aircraft accessories. Among the relays described are five variations of the versatile B-2A Relay built to A.A.F. specifications.

In addition, there are several general purpose aircraft-radio relays; a tiny midget relay weighing less than an ounce; heavy-weight and the new lightweight solenoid contactors (A.A.F. types A-3 B-4, B-5A, B-6A, B-7A); eight solenoids; six types of gun switch handles; a control wheel; propeller protractor; and a bomb and flare release.

This catalog is yours for the asking, when requested on your company letterhead.

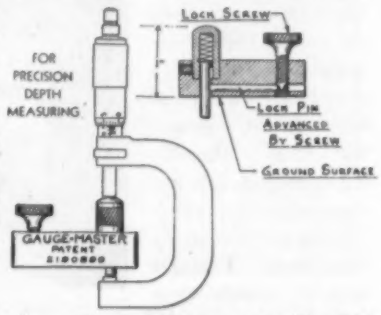
MASTER GAGE

Depth and inside micrometer measurements can be made with this Gauge Master unit which is set with ordinary micrometer caliper. Unit consists of ½ x ½ x 2-inch hardened steel block, near one end of which is mounted hollow head containing coil spring. This spring actuates measuring pin extending through under surface of block and held in place by horizontal pin controlled by thumb lock screw.



In operation, measuring pin is forced down by spring until it seats itself. It is then locked and measured with micrometer caliper. Measuring pins are standard 5/32-inch drill rod. User can make longer pins for measuring any depth. Tool can be set to micrometer reading and used as limit gage. List price is $2.50. Made by L. H. Harvey Assoc., 254 First Ave. N., Minneapolis, Minn.

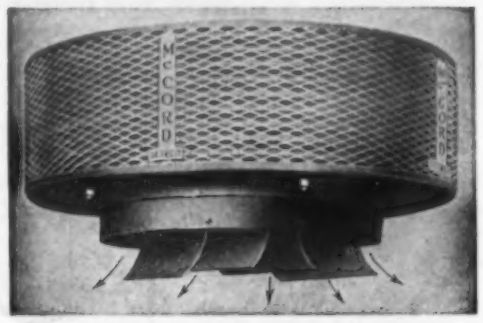
A UNIT HEATER FOR HIGH AND WIDE BUILDINGS



These heaters solve the problem of heating high and wide buildings, such as warehouses, factories, hangars, and garages. The effective distribution of heat from these units permits each heater to adequately service a large area. Every improvement that engineers and the experience of many users is incorporated in the 1942 models. The circular construction is particularly adapted to the spiral fin tube construction because the shape and design of the fin creates an air turbulence without undue restrictions. Fins and tubes are metallically bonded making a highly effective permanent union that maintains contact at high temperatures, providing extra good heat transfer capacity. Due to the careful design, a new degree of quietness has been attained with the result these heaters are being used on installations not previously considered adaptable. New catalog includes complete specifications. Write: **McCord Radiator & Mfg. Co.**, Detroit, Michigan. —Advt.

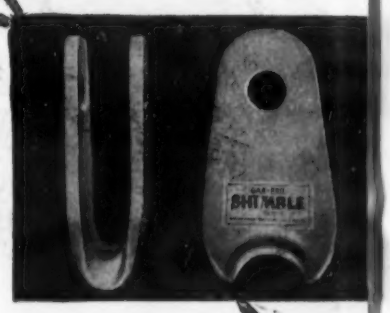
THE NEW GAR-BRO SHIMBLE
COPYRIGHTED—PATENT PENDING

NOW MADE IN REGULAR PATTERN



● LIKE the Heavy Pattern Gar-Bro Shimble, the Regular Pattern is forged from mild steel bars to provide rigid support for wire rope in correct, non-collapsible contour, thereby insuring better rope protection, greater strength for direct pull, and adaptability in use. This fitting takes the place of two or three fittings ordinarily used, namely thimble, shackle or socket, and a clevis. Regular Pattern "Standard" is the shackle equivalent. Regular Pattern Style "A" is the socket equivalent. They provide for the safe strength of rope in general applications. Furnished painted or galvanized, with cottered pin or screw pin, closed or open type. Made in all rope sizes ⅛"-1⅝". Ask for Bulletin No. 72.

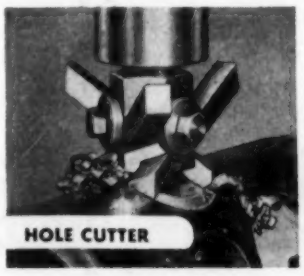
CLARK CUTTING TOOLS

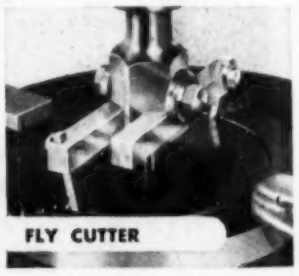
slash tool inventories . . . save tooling costs

It's your job to use the least possible labor, conserve tool inventories, get war contracts out faster . . . and our job to provide the tools you need. These demands are *fully met* with the revolutionary, *adjustable* Clark Cutting Tools that are speeding production, reducing tool requirements, and slashing man-and-machine hours in thousands of plants throughout the nation . . . and will bring the same economies to post-war work. The exclusive *adjustable radius* feature of Clark hole cutters, fly cutters, surface facers and counterbores eliminates the need to stock hundreds of fixed-radius tools. Here's proof: If you purchased the complete set of nine Clark counterbores with a cutting range of ¼" to 5½" it would only cost you $295.00 whereas hundreds of fixed-radius cutters would be necessary to cover the same over-all diameters and the cost would run into thousands of dollars. These are but *two reasons* why you need Clark Cutting Tools—order them today from your jobber . . .



EXAMPLE NO. 1

Clark Adjustable 3-Blade Hole Cutters make accurate, smooth holes in flat or curved metal, plastics, wood, transite. 7 sizes cut ⅝" to 5", up to 1" thick. No reaming or deburring. Fewer operations are required.



EXAMPLE NO. 2

Clark Adjustable 2-Blade Fly Cutters. 2 sizes cut holes or discs 2½" to 10", up to 1" thick. Pitched blades cut true, relieve chatter. Other models cut gaskets, rings, discs from live rubber, problem materials.

EXAMPLE NO. 3

Clark Adjustable 3-Blade Facing Tools. 4 sizes cover all fractional diameters, 1¼" to 5", do the work of End, Shell and Slab Mills, Inserted Tooth Cutters. Fit all machines. Tools available with all types of blades, including carbide tips.

EXAMPLE NO. 4

A real tool bit conserver! Mechanic's MODEL A and Heavy Duty MODEL B for accuracy, uniformity in grinding *both* National 60° and Acme 29° tool bits. Both models handle bits for use in Armstrong Tool Holders. *SPECIAL MODEL C* for grinding Clark Hole Cutter blades.

NON-ABRASIVE FLOOR CLEANER . . .

Absorbo's sponge-like granules will not mar machinery.

ABSORBO, a newly developed dry compound, removes oil and grease accumulations from floors of any type—wood, metal, concrete or linoleum. It absorbs up to 50% of its weight, quickly and easily. Composed of an inert, odorless material that is non-abrasive, it is harmless to skin, clothes, metal surfaces and flooring.

ABSORBO can be sprinkled on floors subject to recurring oil or grease accumulations, and allowed to remain, or, where the condition is temporary, swept up after a few moments. In either case, the floor will be dry and footsure. ABSORBO is approved by the Underwriters' Laboratories, as a Class 1 non-combustible. Even when completely saturated with oil, it resists burning and prevents fire from spreading.

Trial 50 lb. bag $2.75 F.O.B. Newark, with unconditional money-back guarantee. Substantially reduced prices on quantity orders. Territories open for distributors. Write: **FIDELITY CHEMICAL PRODUCTS CORP.**, Dept. B6, 430 Riverside Avenue, Newark, 4, N. J. —Advt.

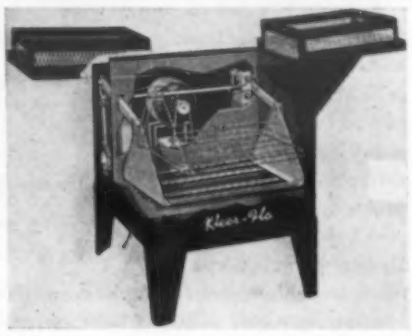
PARTS CLEANING MACHINE



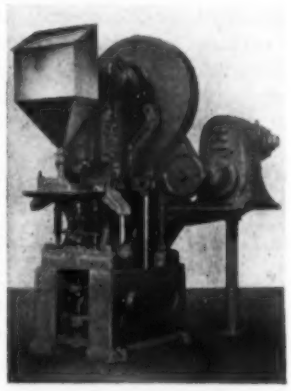
Soluble oils, cutting oils and other materials are removed from parts readily with this Kleer-Flo agitating power parts cleaner which may be used for any type of cold washing. Its use eliminates need for manual brushing and cleaning of parts. In addition to applications for cleaning new parts as they come off automatic machines, it may be used for such special purposes as decarburizing carburetors, pistons and valves in aircraft and automotive maintenance applications.

Vertical stroke of 4½ inches fifty-eight times per minute creates washing pressure which flushes off oils, chips, grit and other foreign material. Standard solvents may be used. Power is provided by ¼-horsepower single phase 110-220 volt alternating current motor.

Parts are placed in mesh baskets for convenience in handling. Illustration shows dual drain boards in use. This effects considerable savings in solvents. Capacity of model PW100 shown is 60 pounds per washing cycle, which may be performed in approximately 1½ minutes. Distributed by **Kleer-Flo Distributors, Inc.**, 250 W. Fifty-seventh St., New York, N. Y.

▲ Mention Item NED-1571 when writing ▲

AUTOMATIC PRESS



Developed especially for production of powdered metal parts and Steatite or other dry-mix ceramics in which close accuracy in dimensions and exact control of density are primary requirements, model R-4 press is completely automatic. High production rates are obtainable. It is recommended also for debulking chemicals, compressing food specialties and similar purposes. (*Editor's Note: This description appeared Item NED-1012, Feb. 1944 wrongly illustrated.*)

Pieces up to 3 inches in diameter and with die fill of 2⅝ inches are compressed at rates of 15 to 45 per minute. Pressures of up to 20 tons are applied from both top and bottom. Pressure adjustments may be made while press is operating. This permits control of density of piece with exactness to assure uniform electrical and mechanical characteristics. For example, either desired porosity in oil impregnated bearings or extreme density needed for carbide tool bits is obtainable.

Features include heavy construction, separate ejection and compression levers, screw adjustment for compression, independent ejection cam, twin disc clutch and combined brake that instantly starts and stops machine even under full compression load, variable speed drive to obtain maximum production with materials and parts of varying characteristics and size, and adjustable gibs to maintain close accuracy in punch and die alignment. Made by **F. J. Stokes Machine Co.**, 5964 Tabor Rd., Olney P. O., Philadelphia 20, Pa.

PAGE *Stainless Steel* WIRE

• If you are planning to use Stainless Steel Wire after re-conversion—**GET IN TOUCH WITH PAGE.**

Remember, wire has *always* been the business of **PAGE**. And, even in the earlier days of Stainless Steel, **PAGE** as a supplier of Stainless Wire learned much of its working qualities.

Then came the wide range of **PAGE** Shaped Wires—Hexagons, Octagons,

Triangles, Keystones, Ovals, Half-rounds—in section areas to .250 sq. inches, and Rectangles and Flats in widths up to ⅜".

All this activity brought more knowledge of the workability of Stainless Steel.

Then came 1941—and war—with a tremendous increase in the use of Stainless Steel that has made this entire organization perfectly at home with this product.

So, again! If you are planning to use Stainless Steel Wire after re-conversion, **GET IN TOUCH WITH PAGE!**

Sarco Bucket Steam Traps

This trap removes condensate from steam supply lines to pumps, engines, turbines and separators and is preferred by laundries, textile, and plastic industries. It can be adapted to the highest commercial steam pressures and temperatures and can be inspected without disturbing pipe connections. Integral strainer protects the mechanism. Sizes ½ to 2", pressures up to 900 lbs. Ask for Catalog No. 350.

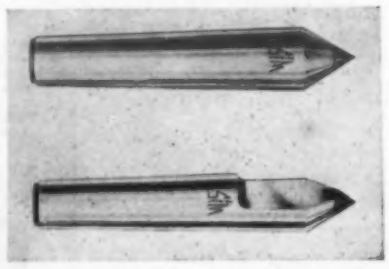
CARBIDE TIPPED CENTERS

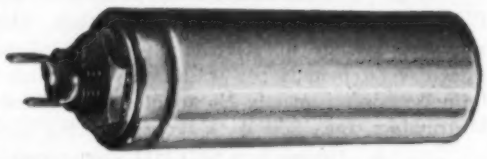


Long service life of these lathe centers and half centers is achieved by extension of carbide insert into shank of tool. This extension is equal approximately to exposed portion of tip. Design permits extra regrinds before need for replacement, should bearing surface become damaged. Centers have concentricity of 0.0002 inch and accuracy is held for long time because of wear resistance of carbide. They are stocked in standard tapers. Made by **Wendt-Sonis Co.**, 1000 Collier St., Hannibal, Mo.

▲ Mention Item NED-1582 when writing ▲

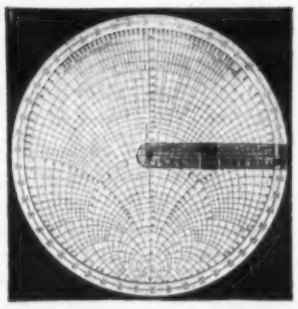
OIL TYPE CAPACITORS

Designed as standard components to replace many similar types of special capacitors used in production of war equipment, type EC oil Capacitrons are available in several capacity ranges with direct current voltage ratings from 600 to 1500 volts, to meet U. S. Signal Corps and Navy specifications. Units are locked on chassis by means of solid nut and lock washer through single hole to clear ¾-inch x 16 threaded Bakelite neck. This neck is lock-spun into extruded insulated metal container, making possible hermetic seal. Grounding of either insulated terminal is accomplished readily with special lug. Dimension of 3 and 4 microfarad sizes are 1½ inches in diameter by 4½ inches in height. Deliveries can be made from stock in some sizes. Made by **Capacitrons Inc.**, 318 W. Schiller St., Chicago 10, Ill.



▲ Mention Item NED-1583 when writing ▲

TRANSMISSION CALCULATOR



Solutions to radio transmission line problems are readily obtained with this calculator. It is fundamentally a mechanical arrangement of impedance coordinate system with respect to set of movable scales. It portrays relationship of impedance at any point along uniform open wire or coaxial transmission line to impedance at any other point, as well as to several other electrical parameters.

These other parameters are plotted as scales along radial arm and around rim of calculator, both of which are independently adjustable with respect to main impedance coordinates. All parameters are related to one another and specific solutions are obtainable through use of adjustable cross-hair index.

Calculator is 9 inches in diameter. It is easy to use and lists for $5. Made by **The Emeloid Co.**, 287 Laurel Ave., Arlington, N. J.

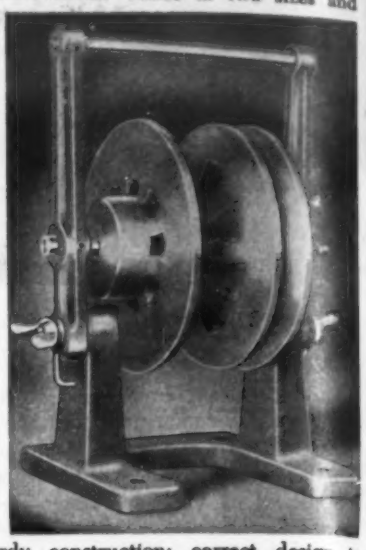
VARIABLE SPEED TRANSMISSIONS

Completely new and thoroughly proven are Toledo variable speed transmissions with ratios of from 1 to 1 to 10 to 1, for fractional to 3.5 horsepower drives. Made in two sizes and four forms, they are low in price and deliver positive speed control.



Available either completely assembled, with or without belts; with a thrust bearing for vertical mounting; or wheel assembly only for special machine design applications.

Field of application is practically unlimited. They are being applied to machine tools and other drives in numerous industries. They may be mounted in any position for either straight line or angle drive.

Important features include: ease of installation; compact size; sturdy construction; correct design to eliminate belt wear; infinite speed selection of stepless speed changes; speed change without stopping; oversize bearings; interchangeable parts; noiseless operation; and can be used with any size motor.

If you have a variable speed requirement, for either a complete variable transmission unit or variable wheel assembly only, let us show you how you can improve your product at a considerable saving. **The Toledo Timer Co.**, 2224 Albion St., Toledo, O. —Advt.

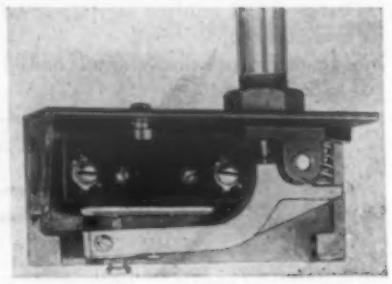
TEMPERATURE LIMIT SWITCH



Adaptable for temperature control applications, Model H temperature limit switch is available with normally closed contacts for cutting off heat, stopping fan, closing valve or similar functions, or with normally open contacts for lighting lamp or ringing bell. With single-pole double-throw contacts, it may be used for breaking heating circuit while operating alarm circuit. Foolproof reset button operates from outside of case.

Tube is corrosion and heat resistant. Dial pointer provides for easy setting throughout adjustable range of 200 to 300 degrees Fahr. Snap-acting Micro-Switch is durable and operates without contact troubles. Operating range may be from 0 to 1400 degrees Fahr. Made by **Burling Instrument Co.**, 253 Springfield Ave., Newark, N. J.

▲ Mention Item NED-1592 when writing ▲

ZINC PLATING SOLUTION

S-B addition agent with special alkaline zinc plating solutions will produce satin-bright to bright deposits, degree of luster depending upon choice of operating conditions. In unagitated solutions, cathode current density range is from 10 to 45 amperes per square foot. Maximum brightness is obtained with solution temperature maintained at 70-75 degrees Fahr. Deposits are somewhat lustrous when taken from plating bath. Satin-bright to full-bright finish is produced by dipping work momentarily into ½ per cent solution of nitric acid.

Addition agent is claimed to have long life, lasting from 1 to 3 months. Zinc-aluminum anodes are recommended for use in solution. Deposits can be heat relieved, blackened, given phosphate coatings or any chromate film treatment. Deposits can be soldered without difficulty. They are of unalloyed zinc and afford excellent protective value, according to claims. Coating can be subjected to forming, bending or drawing operations without rupturing or lifting. Developed by **Hanson-Van Winkle-Munning Co.**, W. Church St., Matawan, N. J.

▲ Mention Item NED-1593 when writing ▲

RESISTANCE TESTER

Capable of measuring from 0.0001 ohm to 1 megohm, type G-710 Microhmmeter is basically an alternating current bridge. It requires only few tenths of milliwatt through resistance being measured to function accurately. Measuring voltage is at 60 cycles alternating current. Pure resistances may be read directly as ohms.

Low current at terminals makes it possible to measure contact resistance in relays, switches, joints and bondings without changing actual conditions of contact by heat or welding effect. High current effect may be studied by applying up to 5 amperes in series with resistance under test. Conductivity of solution is measured to 2 per cent accuracy. Made by **Tech Laboratories**, 7 Lincoln St., Jersey City 7, N. J.

BUSS Super-Lag fuses are used in feeder and branch circuit switches.

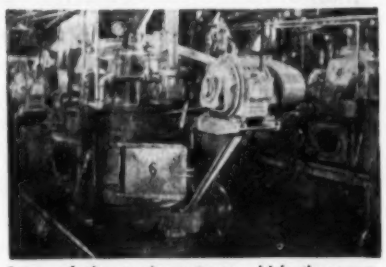
"Needless Motor Shutdowns Decreased Where We Installed BUSS Super-Lag Renewable Fuses"

Says Mr. Frank M. Herrick, Chief Engineer, Minnesota Valley Canning Company, Le Sueur, Minnesota.

"Our canning operations are tough on fuses," continues Mr. Herrick, "because our operating season is so limited we operate 22 hours a day—and use the other two hours to clean up the machines. The plants are thoroughly washed, consequently, the steam and moisture tightens motor belt drives. Condensation and moisture in the motors, plus tightened belts, make motor starting conditions a heavy burden on fuses. BUSS Super-Lag Fuses have definitely minimized this problem because of the long time-lag and positive contacts of the fuses.

"Where we have installed BUSS Super-Lag Fuses we have noticed an appreciable decrease in needless shutdowns, which we credit to the time-lag of BUSS Fuses as well as to their simple design."

Do you have a tough fuse problem? You can probably solve it as easily as Mr. Herrick did—by using all BUSS Super-Lag Fuses.



Some of the equipment on which there are some 365 electric motors from ⅛ to 15 horsepower.

Buss Fuses require no maintenance or periodic inspection. They don't open needlessly. If one opens, you can be sure some condition needs correction.

Here is why BUSS fuses greatly reduce or entirely prevent needless blows

The fuse case is designed to insure good contact on the link—vibration or heavy overloads or the constant heating and cooling of the fuse will not permit poor contact to develop.

The fuse link is the famous "BUSS Super-Lag," "Lag-plates" attached to it give it a long time-lag.

How to solve the "shutdown problem"

Pass the word along that all purchase records dealing with circuit protective devices should be immediately changed to call for BUSS Super-Lag Renewable Fuses. Then, as fuses are replaced or new installations made, your plant will automatically get the benefit of the carefree, trouble-proof protection that BUSS Super-Lag Fuses afford.

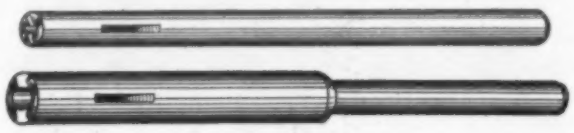
BROKEN DRILL ADAPTER

Designed not only to permit use of broken drills, but also for use as extension drill, this Topflight broken drill adapter is available in practically any required length. Standard sizes



are 4 inches in length for drills ranging from No. 50 to No. 20. No soldering or swedging is required to hold broken piece of drill securely in place and perfectly aligned.

Broken drill is inserted in adapter and self-locking device instantly centers and grips it. Vibration is claimed to increase holding power, yet broken drill can be ejected easily when desired. Made by **Topflight Tool Co.**, P. O. Box 6728, Towson 4, Md.

COMPOSITION STAIR TREADS

Suitable for replacing treads of rubber, Dura-Val and Dura-Val De Luxe stair treads are made of asphalt and felt composition. They look, feel and wear like rubber. Treads are waterproof, washable and long wearing and are designed with corrugated, non-skid surface. They can be cemented quickly and permanently to wood, metal, concrete and other materials with So-Lo stair tread cement.

These treads are available in both flat and nosing type, in black. Standard flat tread is 9 x 18 inches. Standard nosing tread is made in two sizes: 9 x 18 and 9 x 24 inches. Extra size treads can be furnished on special order. Made by **So-Lo Works, Inc.**, Loveland, O.

▲ Mention Item NED-1601 when writing ▲

METAL CUTTING POWER SAW

Of improved design, this line of metal cutting power saws includes hydraulic unit. Hydraulic micro-set length gage is mounted on conveyor to gage length of cut accurately. Feed pressure is adjusted by vernier finger-tip control which permits settings to ounces. All parts are readily accessible for cleaning and adjustment. The 7 and 11-inch automatic models can be converted easily for cutting single bar or nest of bars or tubes.

Four-sided saw frame completely surrounds blade and work. Backing plate blade support permits application of maximum feed pressure with minimum of strain on blade. Eight bearings on which saw frame and guide travel have been enlarged. Bearings have ground and renewable inserts. Saw frame is balanced in its reciprocating travel by dual hydraulic cylinders. Driving force is centrally applied. Chip capacity has been increased 60 per cent over former models, reducing number of clean-up periods required. Made by **Peerless Machine Co.**, Dept. N, 1600 Junction Ave., Racine, Wis.

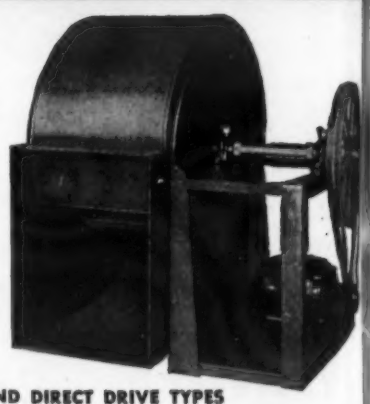
AIR, TOO, MUST WORK FOR VICTORY
KEEP IT MOVING WITH
Peerless VENTILATING SETS

★ Mess halls, army barracks, war service buildings and industrial plants require the movement of air for ventilating, cooling, heating or complete air conditioning.

These situations demand ventilating fans that not only measure up to capacities rated on the test floor, but which will also deliver the rated air volumes under practical operating conditions. Peerless Utility Ventilating sets are just such units.



BELT AND DIRECT DRIVE TYPES

Peerless Ventilating Sets are supplied in 26 belt-driven sizes and 12 direct-connected sizes. Belt-driven units are powered with from ½ to 7½ horsepower motors. Direct-driven units have ½ to 2 horsepower motors. Belt drive units are also furnished with variable pitch motor sheaves for speed adjustment.

All units can be supplied with or without weatherproof hood covers for drive mechanism.

Write for Bulletin SDA-91, which gives complete dimensions and ratings of Peerless Utility Blowers.

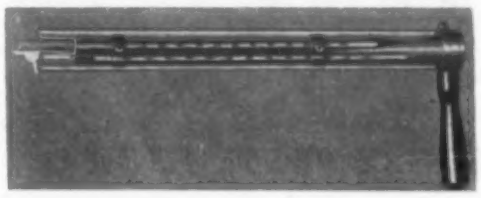
SLING PSYCHROMETER

Danger of breaking thermometers is overcome through design in this sling psychrometer. Two thermometers are securely mounted within transparent plastic tube. When unit

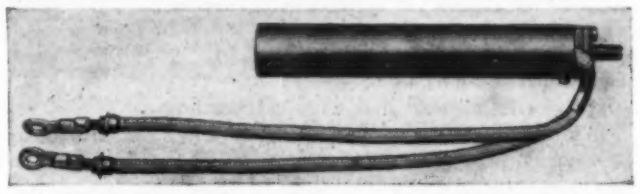


is whirled to obtain wet and dry bulb readings for relative humidity determinations, blast of air through tube from center of rotation is created. This air blast is caused by both centrifugal force and Bernoulli effect. Wet bulb thermometer cools rapidly and fully. Instrument is particularly useful in field and plants where rough handling is encountered. Made by **Laboratory Specialties, Inc.**, 144 S. Wabash St., Wabash, Ind.

▲ Mention Item NED-1610 when writing ▲

TUBULAR THERMOSTAT

Applicable for all types of equipment where very close regulation of temperature is required and where light weight, small size and compact design are of importance, this tub-



ular thermostat is ⅝-inch in diameter by 3-11/16 inches long. It consists of high-expanding nickel steel tube enclosing contact mechanism. Ratio of contact motion to tube expansion is very high so that extremely close temperature control is secured. Because all parts are held in tension, unit is unaffected by vibration. Contact mechanism is of slow make and break type with large silver contacts.

Nickel steel tube is only part affected by temperature changes. As this is directly exposed to temperature variations, there is no inherent lag in operation. Contacts will make and break with change of less than 1 degree Fahr. Adjustment is claimed to be maintained indefinitely and there is no tendency to creep. Unit may be furnished with normally open or normally closed contacts. Temperature range may be up to 600 degrees Fahr. Current rating of contacts is 10 amperes at 30 volts direct current or 10 amperes at 110 volts alternating current. Leads may be supplied to user's specifications. Temperature is set and locked to customer's specification. Made by **The Wilcolator Co.**, 1001 Newark Ave., Elizabeth, N. J.

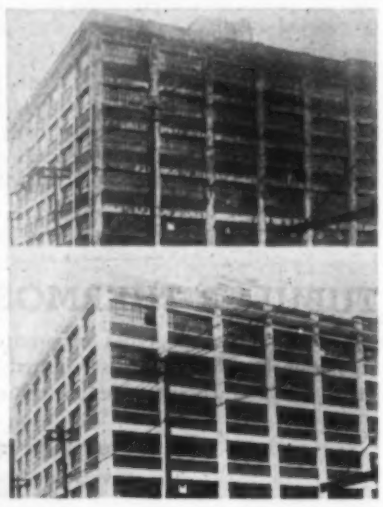
NEW Processes AND Materials

MASONRY PROTECTION



After four years of laboratory research and six years of field application under control and observation, Waterfoil which restores masonry surfaces and improves appearance is now available for industrial use. Made of irreversible inorganic gels which react chemically with lime hydrate of masonry, material may be applied to concrete, brick or stucco surfaces. It forms hard, heavy coating which adheres strongly with physical and chemical bond.

Resulting coating has microscopically fine spongelike character which permits masonry to breathe. Water in vapor form can escape, but absorption of water in liquid form is impeded. Rusting of steel reinforcement bars and spalling is inhibited.

Material is applied by stiff brush and is claimed to lengthen life expectancy of any structure. It is made of non-critical materials. Made by A. C. Horn Co., 43-36 Tenth St., Long Island City 1, N. Y.

POLYVINYL RESINS

Now available to industrial users, GEON group of polyvinyl resins is derived from basic raw materials which have mineral origin. Two of these resins, GEON 202 and GEON 203, are entirely new vinyl chloride: vinylidene chloride copolymers and are different from any others previously developed in this group.

Materials can be processed easily on existing equipment and will expand the field served by this class of plastic materials. Coating of fabric, paper, foil and other materials, manufacture of film for packaging and manufacture of extruded and molded materials are among principle fields for these resins. Purchases of this material are subject to allocation under General Preference Order M-10, although reasonable quantities are available for experimental purposes.

Resins are claimed to offer combination of rubber-like properties with nonflammability and resistance to oxidation. In addition to resins in powder form for compounding by purchaser, they may be obtained in ready-to-use form, either as granules or sheet. Tailor-made formulations can be supplied for special purposes. Made by The B. F. Goodrich Co., Chemical Div., Dept. E., 500 S. Main St., Akron, O.

Peelable PRODUCTION STICKERS

APPLIED WITHOUT MOISTENING
ADHERE TO ANY SMOOTH SURFACE
EASILY PEELED OFF

Here's an entirely new type sticker that makes obsolete past methods of marking parts in production—takes the place of string tags, chalk marks, water-gum stickers.

These new Kum-Kleen stickers are far easier and faster to use—are applied without moistening, stick permanently with a finger-tip pressure to any smooth surface—metal, glass, plastic, wood, paper—won't fall off and can't get lost. When the job is done they peel off like magic—in one piece, never harm the surface. Available in various sizes, printed or plain.

Write for samples and booklet which explains hundreds of ways in which Kum-Kleen stickers have increased production and efficiency Dept. NED-3.

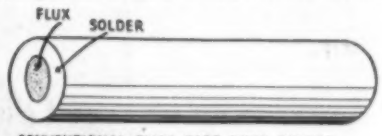
RUST PREVENTIVE

Developed for internal plant protection of steel parts between processing or machining operations, Cosmoline No. 805 is a combined rust preventive, cleaner and fingerprint neutralizer. It neutralizes such causes of corrosion as chemical atmosphere, fumes, high humidity and particularly, acid perspiration from workers handling parts. This rust preventive is fluid product which conforms to requirements of Ordnance Technical Manual TM 38-305. It will meet and exceed 24-hour salt spray and 100-hour humidity tests. Made by **E. F. Houghton & Co.**, 303 West Lehigh Ave., Philadelphia, Pa.

▲ Mention Item NED-1630 when writing ▲

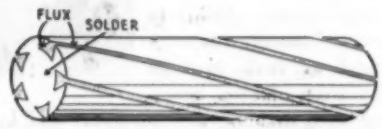
FLUXED WIRE SOLDER

Containing flux in longitudinal grooves on surface rather than in conventional core, Fluxrite fluxed wire solder is claimed to have advantage of applying flux to work before solder melts. Since flux is outside, it liquefies and flows onto work immediately when heat is applied. This is said to assure thorough fluxing and to result in strong soldered joints.



CONVENTIONAL FLUX-CORE WIRE SOLDER

Design also guarantees unbroken flow of flux, since there is more than one flux-filled groove. Since flux is on outside, its availability can always be checked by simple visual examination. This wire solder is available in standard diameters, and in two compositions designated as Red Stripe and Green Stripe. These designations refer to color of flux which has been dyed for identification purposes. Made by **National Lead Co.**, Room 1815, 111 Broadway, New York 6, N. Y.



NEW TYPE OF WIRE SOLDER WITH FLUX IN GROOVES

▲ Mention Item NED-1631 when writing ▲

LEAD PLATING SOLUTIONS

Affording corrosion resistant coating for protection of iron and steel, lead coatings formed through use of Concentrated Protecto lead plating solution may also be used to limited extent on nonferrous metals. Plating solutions are prepared by adding three parts of water to one part concentrate. Resulting solution is for general purpose plating at low to medium current densities. Plating range is from 5 to 15 amperes per square foot.

Super Protecto lead concentrate is diluted with equal parts of water to form electroplating bath for general purpose plating. Since metal concentration is four times that of first mentioned solution, current density range is extended to 30 amperes per square foot, or higher with suitable agitation. This solution is recommended for barrel plating.

B-H lead solution is used for plating as prepared. It is intended especially for lead plating bearing surfaces. Deposits with proper micro-structure for subsequent indium plating and heat treating are produced. Solutions developed by **Hanson-Van Winkle-Munning Co.**, West Church St., Matawan, N. J.

New Processes & Materials

PROTECTIVE PLASTIC COATING

Used to guard plastic surfaces in aircraft during fabrication, Protecto-Kote No. M-13780 is liquid coating and is claimed to have been approved for use by Army Air Forces. It dries rapidly, forming protective coating against scratching and abrasion. It is impervious to grease, paints and paint solvents. It may be used on such surfaces as window lights, instrument panel plastic installations and enclosures.

Entire piece of plastic can be dipped into material, drained and allowed to dry. Finish may be sprayed, also, and coverage is about 200 square feet per gallon. Being water soluble, coating is removed easily and no supplementary cleaning or polishing is required. Made by **Reserve Research Co.**, 1637 Superior Ave., Cleveland 14, O.

▲ Mention Item NED-1640 when writing ▲

CONCRETE TANK LINING

Concrete gasoline barges and underground storage tanks are being lined with synthetic rubber "latex" or water dispersion particles of synthetic rubber and are resistant to high octane fuels now in use. Concrete was formerly impractical as tank material because alkalies reacted with gasoline to form gums and lower octane rating. New process was developed by Stoner-Mudge Inc. of Pittsburgh.

Fabric of type used for camouflage cloth is cemented to concrete with Thiokol "latex" and then coated with same material. Result is gasoline-resistant container which protects contents from alkalinity of concrete and which will bridge over normal cracks in concrete caused by shrinkage, settling and unusual stresses. "Latex" made by **Thiokol Corp.**, Dept. SM, Trenton, N. J.

▲ Mention Item NED-1641 when writing ▲

DEGREASING COMPOUND

Containing no critical materials such as carbon tetrachloride or trichlorethylene, Penetone degreasing and cleaning medium is claimed to function better than compounds containing these materials. It is said to be completely free from fire hazards. It does not give off noxious or toxic fumes and operators do not have to wear rubber gloves or aprons for protection.

Material is available in standard form which is suitable for use in 80 per cent of all applications, including degreasing jobs where lighter types of greases and oils are used. Penetone Senior is stronger concentrate and is recommended for use on heavy oils and caked-on greases. It exerts mild inhibiting action on metal surfaces which retards corrosive action.

Major Penetone is recommended for heavy duty degreasing requiring extremely potent preparation. The above cleaners also may be used for such maintenance operations as cleaning floors under machinery, as well as on garage and grease rack floors. Made by **The Penetone Co.**, Tenafly, N. J.

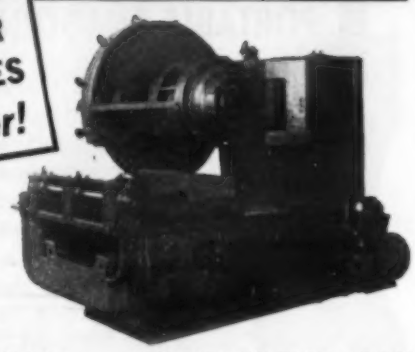
Amazing FRICTION SAW CUTS 131 LB. STEEL RAIL IN 10 SECONDS!

CUTS BAR AND SHAPES Like Butter!



Regardless of your cutting or trimming problems . . . submit them to KLING Engineers. . . . A friction saw may solve them.

Improved Design Friction Saw→

SPEEDS UP PRODUCTION . . . REDUCES CUTTING COSTS From Dollars To Pennies!

Now, with these new improved design Kling Friction Saws, steel can be cut almost as quickly and easily as butter. And, it makes no difference how tough or hard the steel is. A 131-pound steel rail in 10 seconds . . . an 8-inch, 25½-pound I-beam in 6 seconds. The fast cutting of rails, flues, pipe, bar or general structural shapes, saves time and money and greatly speeds up production. Kling Friction Saws will cut any kind of steel; high and low carbon steel or alloy—either hardened or annealed . . . varying sizes and shapes without any change of set-up. Correct design in blade mounting, blade drive, blade cooling and quality of blade, results in better cutting and longer life.

FREE! If you want to *slash* metal cutting costs and increase production, write for details. Complete information in our Bulletin No. 9200 sent FREE. No obligation.

CUTTING GRADE CARBIDE

According to reports of tests by various manufacturers, No. 710 cutting grade carbide is claimed to be superior to any steel cutting grades now available for machining tough alloy steels. Prompt deliveries are insured for proper priorities. Made by Willey's Carbide Tool Co., 1340 W. Vernor Highway, Detroit 1, Mich.

▲ Mention Item NED-1649 when writing ▲

PRECISION FINISH

Employing abrasives with technique which eliminates scratches, Hyprez high precision finish is applicable to surfaces prepared by machining, grinding, honing or lapping.

Even under strong magnification, surface is claimed to present uniform appearance without pronounced scratch pattern. Finish is being applied to ball bearing races, instrument pivots, cartridge case dies, gears, hydraulic cylinders and other parts.

Process is particularly adaptable to straight and tapered holes, as well as to contours. Amount of stock which needs to be removed depends upon quality of surface before finishing, depth of deepest imperfection, hardness and quality of work piece. Developed and applied by Engis Equipment Co., 310 S. Michigan Ave., Chicago 4, Ill.

▲ Mention Item NED-1650 when writing ▲

FILTERING MATERIAL

Containing as many as 6400 perforations per square inch, multipore filter material is adaptable for use in chemical plants, food factories, pharmaceutical concerns, coal and iron mines, steel mills, liquor distilleries and many other types of industries. Typical uses include filtering fruit juices for shipment to combat areas, purification of insulin, production of magnesium and speeding production of four engine bombers.

By reversing procedure involved in eliminating microscopic holes found in application of natural rubber latex for waterproofing fabric, scientists attempted to see how many tiny holes they could create in square inch of latex. After extensive research, they succeeded in blowing as many as 6400 holes per square inch in sheets measuring 42 inches wide by 20 yards long.

Filter screens are made of either hard or soft rubber and may be compounded to resist abrasion, high temperature, alkaline or acid solutions, as well as certain oils and greases. Since material can only be made from natural rubber latex, filters may be applied only to most important products. Made by United States Rubber Co., 1207 Rockefeller Center, New York, N. Y.

There are over SIXTY THOUSAND SPERRY EXACTOR REMOTE CONTROLS in use!

The Sperry EXACTOR Hydraulic Remote Control is a simple, unique, single-tube system designed to control mechanisms over distances up to 200 feet. The more than 60,000 EXACTORS in operation today, solving the remote control requirements of design engineers in many fields, are proof of the thorough engineering and trouble-free design incorporated in this system.

Positive control, through a single tube

It is accurate to a fraction of a degree and entirely self-contained, reproducing applied motion without the aid of an auxiliary source of power. It presents no installation problem, because both the Transmitter and Receiver are compact and light in weight, and the tube which connects them can be bent around obstacles easily. Vibration does not interfere with its positive, reliable action and means is provided for periodic temperature compensation.

If you have a remote control problem — in the railroad, marine, automotive, aviation, or any of the industrial fields — you will want our completely descriptive booklet. Send for it today.

The Sperry EXACTOR HYDRAULIC REMOTE CONTROL is rated at 400 inch-pounds in one direction, through 55° of motion, and 125 inch-pounds on the return.

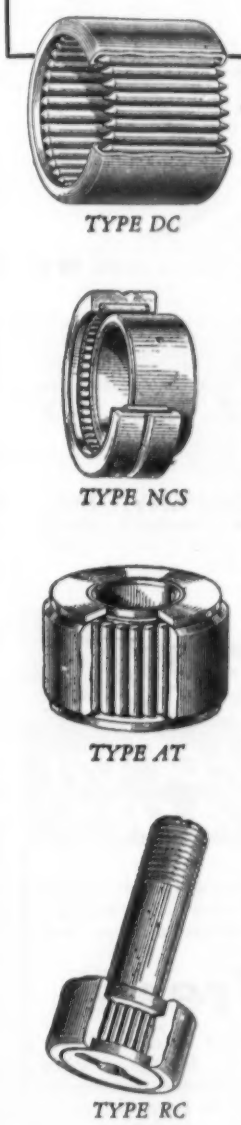
Small Compact Size Features of Needle Bearings



TYPE DC

TYPE NCS

TYPE AT

TYPE RC

REQUIRE LITTLE OR NO MORE SPACE THAN A PLAIN BEARING OF COMPARABLE RATING

One of the outstanding advantages of Torrington Needle Bearings is their exceptionally small size in relation to their unusually high radial load carrying capacity.

The use of a full complement of small diameter rollers within a single retaining raceway—the basic design principle of all Torrington Needle Bearings—has provided the advantage of anti-friction operation within space limits no larger than required for a sleeve or plain bushing.

The small size which characterizes the Needle Bearing also contributes to efficiency and economy of product design in other important ways: it facilitates compact design; simplifies housing structures, frequently permits reduction in overall size; contributes to lighter weight; and through one or more of these advantages—makes for greater efficiency and lower cost.

RANGE OF SIZES AVAILABLE

Type Needle Bearing	Minimum Shaft Diameter	Maximum Shaft Diameter
DC	.1875"	3.500"
NCS	.6250"	5.500"
AT*	.1900"	1.000"
RC	.2500**	1.500**

*Size range to fit Standard AN Bolts Nos. 3 to 16.
**Indicates OD of stud on cam-follower. Cam-roll diameters range from .6875" to 4.000".

If you are planning new products or design improvements in old, it will pay you to investigate fully the advantages in the use of Needle Bearings. Our engineering department will welcome the opportunity to cooperate in developing designs or assist in the selection of the correct Needle Bearing for your requirements.

New Processes & Materials

PREFINISHING CLEANER

Previously restricted for exclusive use by certain war plants, Oakite compound No. 86 is now released to all metal working plants and finishing shops. It is especially designed to facilitate preparation of steel for organic finishing by improving adhesion of subsequent coating of paint, lacquer or other finish.

This acid type detergent removes light spinning compounds, drawing lubricants, machining oils, finger marks, shop dirt and similar materials, eliminating need for preliminary alkaline degreasing. Compound also imparts microscopic crystalline protective coating on work to assure firm bond of subsequent finish. This coating also acts as rust inhibitor and protects parts against rusting between operations. Made by **Oakite Products, Inc.**, 32G Thames St., New York 6, N. Y.

▲ Mention Item NED-1659 when writing ▲

BALANCING COMPOUND

Particularly designed for balancing of electric motor armatures, R-943 balancing compound is supplied in either paste or soft putty form for application with hands or knife. It will set in air at room temperatures in about two hours to condition such that it will not be affected by subsequent applications of insulating varnishes. It does not, however, attain its maximum hardness and mechanical strength unless subjected to baking temperature of 135 degrees Fahr.

This material is also finding applications for certain types of filling operations, such as coil margins and small interstices where its adhesive qualities, low coefficient of expansion and high mechanical strength are important. It is normally supplied in buff color, but may be furnished in black if desired. Made by **Sterling Varnish Co.**, 163 Ohio River Blvd., Haysville, Pa.

▲ Mention Item NED-1660 when writing ▲

FINISHING PROCESS

Eliminating tedious hand finishing and deburring operations, Roto-Finish process deburrs machined metal alloy parts and will prepare metal surfaces for plating without need for polishing or buffing by hand. Parts may range in size from smallest up to those weighing 75 pounds. Radii obtained are claimed to be more uniform than those burred by hand.

Forgings, castings, stampings and machine parts of every conceivable shape are finished without loss of blueprint tolerance. Process uses controlled rotary action, as well as special chips and compounds. Process is owned and serviced by **The Sturgis Products Co.**, 203 Jacob St., Sturgis, Mich.

▲ Mention Item NED-1661 when writing ▲

A COMPLETE CURE FOR MOTOR BURNOUTS

The simplest, surest cure for motor burnouts is to buy motors that have a built-in Klixon Protector.

This simple, inexpensive protector guards a motor's life... never letting it overheat and burnout... yet always allowing the motor to run at peak capacity. Here's how it works.—Overload a motor until it becomes dangerously hot and the Klixon Protector automatically clicks the power "off" until the motor cools to safety... then it turns the power "on", either automatically or by manual reset, depending on the type of protector you specify.

Stop putting up with motor burnouts, insist on Klixon built-in Protectors with every motor you buy. Your supplier can furnish motors with Klixon Protectors... A.C. all sizes; D.C. up to 30 volts.

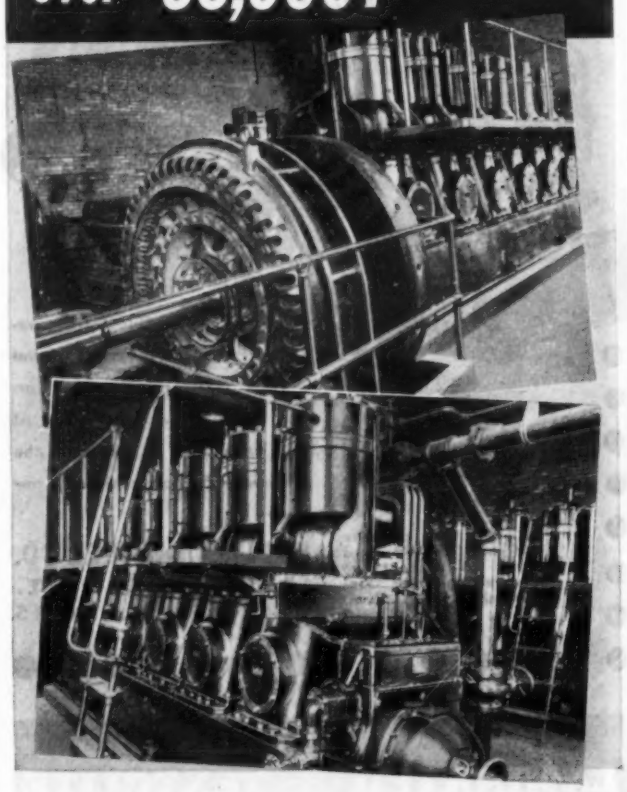
Just Two Fairbanks-Morse Diesels Saved This Company over $58,000!



In 1934 Cargill, Inc., installed two Fairbanks-Morse Diesels in their terminal grain elevator at Minneapolis, Minnesota.

Since then—

★ This Fairbanks-Morse equipment has generated over 6,500,000 kilowatt hours
★ Has reduced power costs by more than 50%
★ Has saved over $58,000 in operating costs
★ Is now showing a *net* profit of $7,000 a year

That's the record of two Fairbanks-Morse Diesels in a plant where power demand fluctuates sharply with high peaks and comparatively small energy consumption. It is a record that combines substantial savings with outstanding performance.

If you need more power—lower-cost power, write Fairbanks, Morse & Co. and let their Engineering Department study your needs. There is no obligation. Fairbanks, Morse & Co., Fairbanks-Morse Building, Chicago 5, Illinois.

NEW *Applications*

MACHINING OPERATION

Virtually automatic machining of Stellite and steel simultaneously with same Carboloy cemented carbide cutting tools is being accomplished by Thompson Aircraft Products Co. Part is special steel aircraft valve with Stellite applied to outside diameter of head and seat. Machining is performed on Sundstrand automatic stub lathe having front and rear tool slide.

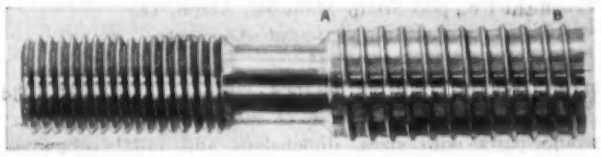
Valve is held on stem end by means of collet in work spindle and supported at head end by tailstock center. Operator pulls in tailstock with handle which locks tailstock. This lever movement also actuates switch mounted on tailstock which starts spindle as well as feed of two slides. Operator has minimum of operations to perform, merely loading and unloading machine. Feed is automatic and machine stops when cycle is completed.

Carbide turning tool makes its cut across both steel and Stellite surfaces at same speed, 80 feet per minute. When tool clears work, forming tool comes in for finishing plunge cut. Excellent results are reported from this combined operation, both as to production and quality of surface finish, as well as tool life. Tools made by **Carboloy Co.**, 11163 E. Eight Mile Rd., Detroit 32, Mich.

▲ Mention Item NED-1668 when writing ▲

THREAD DESIGN

Based upon American National thread and incorporating Dardelet thread principle, A.N.D. thread design takes interference at root of screw thread and flows metal into voids at



flanks instead of taking interference on blank and flowing metal into voids at root of thread. This places all contacting metal under initial pressure due to cold working of surfaces. Entire thread engagement is sealed against fretting and fatigue life is claimed to be improved.

Screw is stronger in tension and torsion because of larger root diameter. It can be driven into receiving material already tapped American National after threads have been truncated with straight reamer. As screw is driven in, it burnishes truncated threads to form 6-degree taper. For assembly, reamed hole is held to plus or minus 0.0005 inch. Tests are claimed to have shown that this thread offers approximately 25 per cent of resistance to flow of electric current as A.N. threads. Developed by **Dardelet Threadlock Corp.**, 2832 E. Grand Blvd., Detroit 11, Mich.

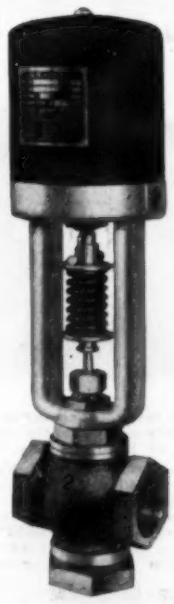
BARBER-COLMAN
MOTOR-OPERATED VALVES



Barber-Colman electric motor-operated Valves offer a number of advantages for all types of process and other control systems associated with industrial equipment. They will provide reliable shut-off for gases and liquids because of positive power-driven seating, and can also provide accurate motor-driven positioning for proportioning service. Current is consumed only when the valve is changing position. Motors are available for either low-voltage or high-voltage lines. These valves are made in a wide range of sizes and types, for accurate, dependable service.

LOW COST—COMFORTABLE
DAVENPORT
WOOD SOLE SAFETY SHOES

DAVENPORT Wood Sole Shoes are especially designed for use where ordinary leather or rubber soled safety shoes do not offer enough protection. Wooden soles provide sure footing on damp, slippery floors. Hot and rough surfaces cannot injure your workers' feet. Perspiration of the feet is more rapidly dispersed with Wood Sole Shoes.

Comfort as well as foot protection is built into all Davenport Wood Sole Shoes. Vamp and uppers are of pliable oiled grain leather. Counters are made of first grade sole leather. Thick felt insoles provide additional comfort. Soles are of close-grained maple and have correct rock from heel to toe for ease in walking.

All Davenport Wood Sole Shoes are available with Safety Toes.

Wide variety of styles, each designed for a particular industry.

HOW YOU CAN SAVE
Time-Money-Manpower
WITH
EXECUTONE
Communication Systems

EVEN THE BEST-RUN ORGANIZATIONS HAVE THESE PROBLEMS . . . DOES YOURS?

Do you have to keep customers "hanging on" the phone while you get in touch with people in your organization? Do inter-office calls jam your switchboard, causing "busy" signals and delays? Do you constantly waste time trying to locate employees who are away from their desks? Does the distance between your office and remote departments cause delays and mistakes? Do even the simplest instructions to an employee require a "personal interview"?

If *any* of these conditions exist in your organization, *you are losing money!* Why not put a stop to these leaks?

FREE BOOKLET TELLS YOU HOW

Write today for your free copy of the new EXECUTONE booklet. It tells you in brief, simple terms how over 78,000 EXECUTONE installations are saving money, time and manpower...

— by establishing direct and instant conversational contact between various departments . . . even when the person you're trying to contact is not at his desk. (An outstanding EXECUTONE feature.)

— by freeing switchboards for incoming and outgoing traffic, assuring faster telephone service for customers . . . and eliminating the cost of "call backs."

— by speeding up production, conserving manpower, minimizing errors and maintaining closer executive control over every department.

GOOD INVESTMENTS
for the future

United States War Bonds and Super-Silvertop Steam Traps have a common, outstanding advantage. They are both good investments for the future. Besides, War Bonds purchased now will help keep prices down and prevent uncontrolled inflation. War Bonds become a real financial "back log" for the future . . . Super-Silvertop Steam Traps, too, are an investment for the future. These traps begin paying interest through savings from the time of purchase—on installation time, less fittings, less repairs and more years of service . . . Buy War Bonds today, buy Super-Silvertops when you need them.

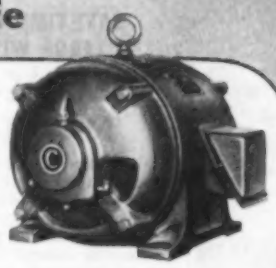
The *Extra Protection* of CENTURY FORM J MOTORS Means Long, Uninterrupted Production Life



The Century Form J Motor has many features that contribute to longer motor life and more accurate performance of the driven machine. The upper half of the motor is closed—protecting it against falling solids and dripping liquids—helps keep out dirt, chips, cutting oils, tools, etc. Its smooth, well-proportioned contours make it easy to keep clean, as well as easy to look at.

The Century Form J Motor is unusually free from vibration, which is important to quietness, accuracy, and precision of the machine on which it is mounted. A very effective ventilation system keeps the bearings and windings cool—adds extra life.

Today—and tomorrow, it will pay you to remember Century Motors for all your electric motor requirements.

Exide's LIGHTGUARD

COMPACT and COMPLETE EMERGENCY LIGHTING UNIT

Despite all precautions of utility companies, disasters beyond their control can plunge war plants, arsenals, power stations, and other vital areas into darkness. Avoid such dangers with an Exide LIGHTGUARD. It stands by for instant, automatic lighting protection.

An Exide LIGHTGUARD is a good investment. Here's why:

1—No fixtures or wiring needed, except simple cord and plug connection to A. C. supply.
2—Low price.
3—Lights an area of 7500 square feet.
4—Self-contained, automatic operation and charging.
5—Long-life, thick plate Exide Battery. Visible pilot bulb.
6—Selenium trickle charger automatically maintains battery charge from ordinary A.C. supply.
7—Can be used as a portable light.

Additional details on this contribution to industrial safety will be supplied upon application to Exide.

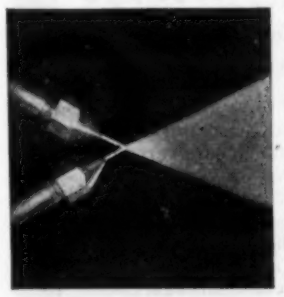
WaterFOG puts out fires IN OIL

The smaller a water droplet is, the quicker it will absorb heat from fire.

That's why WaterFOG makes water effective on oil fires. Its water particles are so tiny—having many times greater surface area than an equal amount of water in spray or stream form—that they cool the fire faster.

Also, being lighter, WaterFOG floats in the combustion area, picking up its full complement of heat from the burning vapors and from the liquid's surface. Then, as it changes to steam, it expands, casting a smothering blanket over the fire.

The fire is quenched . . . vaporization is retarded . . . oxygen is kept out. Yet there is no agitating of the liquid, no spreading of the fire. "Flashback" is prevented, and with smaller quantities used, water damage is restricted. Write for Bulletin 123.



WaterFOG is created by specially-designed Rockwood heads and nozzles, in which impinging streams break water up into FOG. Rockwood engineers will develop the proper particle size, fog pattern and velocity for your conditions. Available in the form of fixed piping installations, hose nozzles and applicators.

Approved by Underwriters' Laboratories and Associated Factory Mutuals—used by Navy, Coast Guard, U.S. Maritime Commission, hundreds of industrial plants. *Executives!* A color movie (16 mm.) showing tests of Rockwood WaterFOG is available.

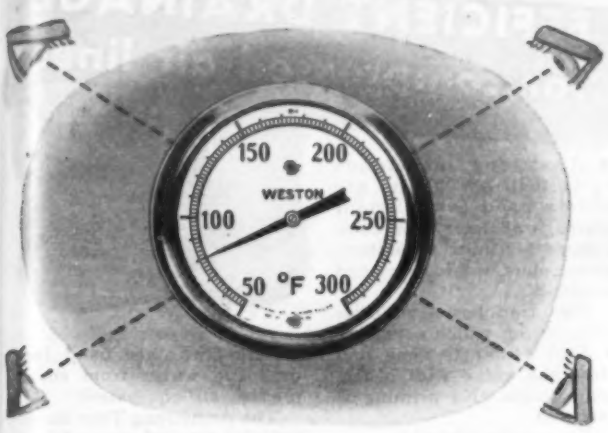
The "eyes" have it . . .



The WESTON gauge-type thermometer is *far more readable*. But the big point is that *seein's believin'* whenever you read a WESTON. Because its high initial accuracy (1% over the entire scale) is maintained over long periods of time. The reason is . . . even the temperature element in the WESTON is all-metal! There is no gas, no liquids, no fragile parts. Thus it can withstand vibration or other mechanical abuse without damage or without affecting its accuracy. It's easier to install, too, and no corrections are necessary for capillary or elevation.

Booklet describing these rugged and dependable thermometers, including types, stem lengths, prices, etc., gladly sent on request. Weston Electrical Instrument Corporation, 663 Frelinghuysen Ave., Newark 5, N. J.

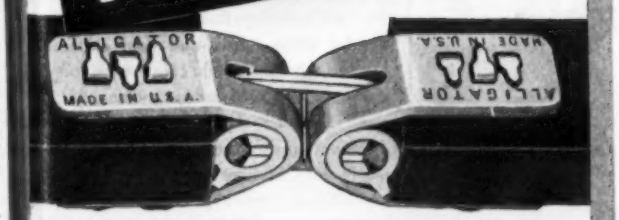
Now you can fasten V-belts by using

ALLIGATOR
TRADE MARK REG. U.S. PAT. OFFICE
V-BELT FASTENERS



● Alligator V-belt Fasteners and the open-end V-belting now being made by belting manufacturers, will enable you to make up multiple V-belt drives from roll belting. These fasteners have been on the market 9 years and are now being used on a wide variety of drives.

Available for B, C, D sizes of belt for industrial use and 1-in. and 2-in. sizes for railroad use. These fasteners, however, should not be used for repairing endless cord V-belts.

Bulletin V-205 will give you complete details as to where and how these fasteners are used, sizes, list prices, tools and application instructions. A copy will be mailed at your request.

Order from your supply house

FLEXIBLE STEEL LACING COMPANY
4664 Lexington Street, Chicago 44, Illinois

Also sole manufacturers of Alligator Steel Belt Lacing for flat transmission belts and Flexco HD Belt Fasteners and Rip Plates for fastening and repairing conveyor belts.

WALES
HOLE PUNCHING EQUIPMENT

FEATURES

1. Usual time-consuming adjustments of conventional set-ups are eliminated.
2. Punch and die held in alignment by holder.
3. Each unit is independent and self-contained.
4. Straight line, staggered or scattered patterns punched with same units.
5. Same units may be used interchangeably on press brake & stamping presses.
6. Nothing attached to press ram.
7. Individual units may be instantly removed or reset.
8. Interchangeable punches.
9. Die setting time and press "down time" reduced to minutes.
10. Same units may be used and reused in active patterns.

● Take up this invitation by putting your hole punching problems up to Wales-Strippit.

Hundreds of metal fabricators are now using Wales Equipment *profitably*.

Wales-Strippit manufactures a complete line of hole punching units and are prepared to develop and manufacture hole punching equipment for special operations and techniques.

"There's Always Something New in the Wales Line."

War goods pile up on foreign docks like this!

Help your soldiers find the needles in the haystacks!

Your goods for fighting men will land on crowded docks like this—on time perhaps—*but* are they marked so they can be quickly *found* in a haystack like this and forwarded without a moment's unnecessary delay to your boy at the front? His very life may depend on their quick arrival at the right spot.

Packing lists attached to the outside of cases are a moral as well as an army must, and so are protectors to prevent the lists being torn off in transit.

Don't let another mixed shipment go without this protection!

A recent army directive requires that all cases of assorted items, having an ultimate foreign destination, have two packing lists attached to the outside. One of these lists must be covered with 3/16" plywood or .080 waterproof fibre protector. The army specification waterproof .080 fibre board protectors we make are deeply dished to accommodate papers and yet tack flat. The words packing list are deeply indented. Three sizes—immediate delivery from stock. Write, wire, or clip and mail this for prices.

STURTEVANT QUALITY

Immediate Delivery
$12.75
Less Wrench

SPRING TESTER

Fast, Accurate and Inexpensive

Using any accurate torque wrench as its measuring element, this inexpensive spring tester measures the recoil of springs up to 7" (free length) and 2½" in diameter when compressed to any predetermined length. As easy to "set" as a vernier scale; as easy to operate as a light arbor press; and as easy to read as a school ruler—no multiple dials, no relative readings, no complicated computations. Just pull down the torque wrench handle, and take the direct reading when the built-in tone device sounds. Enables anyone to inspect, test, check or measure the recoil of springs in a few seconds . . . to accurately match sets of springs (as valve spring of engines) in a few minutes.

Widely used for testing springs in laboratories and in heat treating, inspection, assembly and repair departments to eliminate costly guesswork in building and maintaining automotive and aircraft motors. (Note: Torque Wrench NOT INCLUDED, unless specified). *Write for Bulletin ST-22.*

EFFICIENT DRAINAGE for compressed air lines

• Armstrong snap-action ball float Air Traps are widely used for efficient drainage of water from compressed air lines, separators, aftercoolers, intercoolers and receivers.

This trap has a stainless steel spring which acts over a dead center to open and close the valve with a fast snap action. No priming is required.

For service where dirt and oil conditions are bad, standard inverted bucket Armstrong traps are used for draining water from compressed air equipment.

The Armstrong Trap Book explains air and steam trapping in detail. We'll be glad to send you a copy.

ANSWERS to Many Pushbutton Control Problems

OUTSTANDING FEATURES
Wide choice of operating elements with one to four circuits each

Cutler-Hammer's New Wide Range Line of Heavy Duty Pushbutton Stations offers an Unlimited Variety of Functional Combinations

● Cutler-Hammer offers a line of Heavy Duty Pushbutton Stations (NEMA Type 1) with surface mounting enclosures which accommodate from 1 to 8 Cutler-Hammer new unitized pushbuttons; and with flush mounting constructions which accommodate from 1 to 3 C-H unitized pushbuttons. The line provides the widest selection of functions and combinations available today and permits these stations to be "tailored" to your exact needs.

Among the many advanced engineering features are the following: one to 4 circuits for each pushbutton; wide variety of operators; big buttons for gloved-hand operation; projecting shatterproof color caps for 180° visibility; fitted "flange-seal" covers for extra sturdy and tight enclosure; rugged yet light weight construction; ample internal free space for easy wiring despite small size; no sharp corners or edges; excellent appearance; optional padlocking feature. Stations may be mounted horizontally or vertically. Write for further details today. Costs About the Same ... But Cuts 2½ times as Fast, and with ⅓ the Blade Cost

Compare this moderately priced, intermittent high speed hack saw with any other metal cutting saw in its price class. Compare for speed, for accuracy, and for blade cost and operating cost. You will find it cuts 2½ times as fast as other type saws advertised as "fast," and at a blade cost that is but 1/3 of that of saws which are sold as "economical". For straight cutting-off work, this saw is surpassed only by the High Speed Heavy Duty all-ball-bearing MARVEL No. 6 and No. 9 Saws, and MARVEL No. 6A and 9A Automatic Production Saws. When you read that other saws are "FAST", remember the MARVEL 4B is FASTER, and that the MARVEL 6 and 9 series Saws are still by far, the FASTEST.

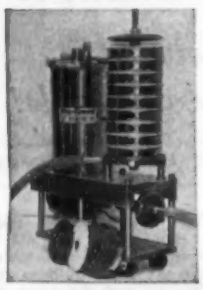
Alsop FILTERS for ALL LIQUIDS



Alsop with 25 years of filtration experience, presents now a complete line of modern filters for every kind of liquid.

Exceptional filtration principle in small, compact, simply operated units, using inexpensive filter discs, to provide the complete and perfect elimination of all dirt, rust, sludge and impurities from liquids, including all oils.

Units are made in portable types with pump and motor, in stand types, and for pipe line connection.

Any capacity, for any degree of filtration desired.

The complete story of liquid filtration yours for the asking. Write today for your copy.

Vinylite

TRADE MARK

This Mirror-Like Finish has taken Millions of "Punches"

EIGHT YEARS AGO, several hundred industrial workers "punching" in and out four times daily subjected this time clock to severe abrasion. Scraping of thousands of perspiring, gritty hands caused the original finish to fail in less than a year's time, with subsequent corrosion of the base metal.

Seven years ago, the time clock was refinished with a VINYLITE resin coating. For more than two thousand days, the workmen have checked in and out, exposing the clock to the same wear and tear. Through literally millions of "punches", the VINYLITE resin coating still protects the metal case. In fact, it has retained its high gloss and looks as though it were freshly applied. Here is ample testimony to the exceptional wear and abrasion resistance of these modern, durable coatings.

Such coatings can be applied to metal, concrete, or wood to provide attractive appearance and long-lasting protection despite extremes of service. Our Field Engineers and Development Laboratories will help you adapt them to your essential products or equipment. Many types of VINYLITE resin finishes are available for essential service. We will be pleased to send you further information. Address Department 8, please.

C-F POSITIONERS

Automatic Welding . . . with C-F POSITIONERS

—is possible on many jobs if you have a C-F Welding Positioner. Coming in 9 sizes (capacities to 30,000 lbs.) tables tilt to 135° beyond horizontal and rotate 360°, under push button control. Exclusive C-F Variable-Speed control gives table rotations ranging down to 0 r.p.m. for all sizes.

All C-F Positioners are multi-purpose tools equally efficient on either job or production welding.

Keep Drains Clear and BLAST THE AXIS

with "TNT" (Grease) trapped by ZURN GREASEPTORS

Connected to drains adjacent to sinks and other fixtures, Zurn Greaseptors save manpower and needless expense by keeping drains clear, and at the same time help to win the war—by intercepting, separating, and recovering waste grease for the making of explosives. Thousands in use in military cantonments, restaurants, hotels, institutions. Average recovery in restaurants 14 pounds per 1,000 meals. Easily installed, on or below floor, by plumbing contractor or maintenance man. Three convenient sizes—capacities, 25, 18 and 12 gallons per minute. Send coupon for complete information.

Zurn Greaseptors are approved under War Department Specification for Theater of Operations (Modified) and Mobilization Construction Equipment, PE-620

MEASURE Both VOLTS and AMPS with ONE INSTRUMENT

Type AK-1 Accuracy 3%

The G-E Hook-on Volt-ammeter

You get double value from this handy, portable a-c instrument—it will measure up to 600 volts and up to 600 amps.

It is operated simply by a *push* and a *pull* on the handle. Thus, an extension pole can be used for protection from high-voltage circuits.

Heavy-duty construction makes it especially popular among maintenance engineers, plant electricians, and trouble shooters. The carefully designed dovetail joint on the clamp reduces errors caused by imperfect closing to less than 2 per cent.

Bulletin GEA-2950 gives complete details, prices, and many helpful suggestions for operating this versatile instrument. *General Electric Company, Schenectady, N. Y.*

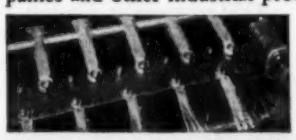
RIGHT ON THE MONEY
here's proof of proper torquing

the Chapman Torque Calibrator distributed by Tubing Seal-Cap Inc. measures torque within *1 inch-ounce*. Each Livermont Torq-Stop Wrench is set and tested for accuracy on this precision scale to a point where the beam balances. Wrench must not break beam with the addition of small weight. In this case a five cent piece.

TORQUING "RIGHT ON THE MONEY"
with the world's easiest-to-use torque wrench—a recommended S.A.E. standard

Now nuts, bolts, clamps and fittings can be tightened to their safe, proper torque "right on the money" by unskilled help.

The accurate, sturdy, compact Livermont Torq-Stop Wrench is a production line tool that increases output, assures correct torquing. No dials, no batteries—nothing to watch. Gives an audible "click" and a definite physical sensation is transferred to operator's palm when proper torque is reached. Used by aircraft companies and other industrial production plants. S.A.E. dimensions.



10,000 OPERATIONS BEFORE FINAL APPROVAL. This is the Livermont Torq-Stop Break-In Table. Each Wrench after being set to its proper torque is operated through 10,000 consecutive cycles.

Send today for 36 page illustrated Aircraft Tubing Manual.

Tools Are Weapons—Treat 'Em Right.

Precision Small Parts you can trust with your life

NO job for amateurs, making these Lycoming R-680 aircraft engine cam followers and cam follower guides of alloy steel on a war-quantity basis. Clearance between walls of follower and guide must be held between .0013 and .0003 inch—and the mating diameters are ground and honed to a 10 micro-inch finish, a mere 10 millionths of an inch! *And they've got to be interchangeable—they're not factory paired.* You'll need Western Automatic's production ingenuity, skilled workmen and vast precision equipment after the war. We suggest that you write us for complete facts *now.*

METAL STAMPINGS

Correctly designed metal stampings provide the fabricator with superior parts that are usually more economical than parts formed in other ways.

Symmetry of line, balance, and length of performance are attributes of good design. Cold working of metals suitable for stamping increases their strength—usually without over-stressing, but such over-stressing can readily be relieved. Practically all stampings are designed to develop strength, lessen weight, assure uniform section thickness and improve appearance.

Smoothness of surface which requires little or no finishing, and the broad choice of materials, makes stamping particularly applicable to a wide range of products. Commercial can form stampings from steel, stainless steel, Monel metal, aluminum, copper and copper alloyed metals and clad metals.

At Commercial, your problem will be handled by engineers and workmen thoroughly familiar with tool and die design and production equipment and methods that assure quality work in quantity production.

While quantity production usually makes for lower unit cost it is not necessary in connection with Commercial stampings, as they have a number of standard shapes available without die charges.

Send us details of your problem today . . . our engineers are at your service. **The Commercial Shearing & Stamping Co.**, Tod Lane, Youngstown, Ohio. —Advt.

Employees can't misunderstand—when they have *photo-exact* copies of letters, orders, blueprints, technical data or sketches. A dozen departments or branch offices can have A-PE-CO photo-copies on file! You can copy practically everything — even blueprints of which no tracings are on hand. Any office boy or girl can make A-PE-CO photo-copies quickly and easily. No technical knowledge necessary. Thousands of America's largest business houses have found the A-PE-CO Photo-Copyer indispensable. See how *you* can use it to avoid mistakes and save time.

Write, today, for descriptive folder.

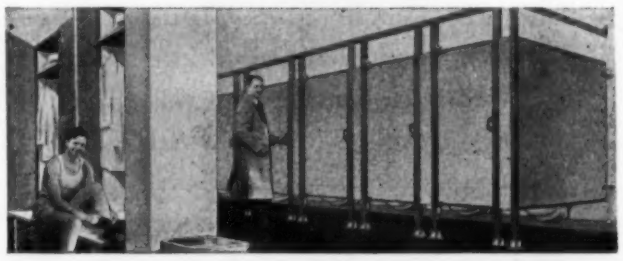
Bothered By Grievances?
KEEP TOILET ROOMS AT SUNDAY BEST
. . . Houseclean Now!



*Sanymetal** **ASBESTOS-BOARD**
TOILET COMPARTMENTS

Inadequate or unsanitary toilet rooms imperil physical fitness of workers, lead to irritation and resentment. Forestall bad feeling by replacing old, dirty compartments and fixtures, cleaning walls and floors, improving light and ventilation. Sanymetal Asbestos-Board Toilet Compartments give a lift to factory toilet rooms, encourage orderliness and promote good feeling.

SAVE TIME AND MONEY BY INSTALLING SANYMETAL TOILET COMPARTMENTS: One order, one priority covers everything you need for completing installation of toilet compartments, even complete door hardware and partition fittings. Sanymetal Toilet Compartments are economically designed and built by specialists with over 28 years' experience. Durable and rigid installation provided by laminated cement asbestos-board which affords a strong structure resistant to fire, wear and moisture, free from dirt-collecting pockets and ledges; easy to keep clean. Write for Bulletin No. 940 for complete data on Sanymetal Asbestos-Board Toilet Compartments. For quick action, see "Partitions" in your phone book for Sanymetal Representative. Special toilet room modernizing check list available on request.

The a.c.f. Berwick No. 2 Type "C" Horizontal Heater is equipped with air-pressure, water-cooled electrodes. The heat is determined by the degree at which solder will flow.

FASTER SOLDERING and a SOUNDER JOINT with the a.c.f. Berwick Electric Soldering Heater

Heating the piece to be soldered to the temperature at which the solder flows, gives a cleaner, stronger soldered joint. The No. 2 Type "C" a.c.f. Berwick Horizontal Electric Heater heats *quickly;* to 350°F. for soft solder, to 1350°F. for silver solder.

To solder a tube to a gage body, the body is placed between the electrodes and spot-heated to desired temperature in a few seconds. The tube is placed against the body, and the solder applied. This immediately melts, and flows to form a clean, strong joint.

Write us your soldering problems. Send samples to solder for your inspection and comparison.

DE-BURR MECHANICALLY!

ROTO FINISH
THE STURGIS PRODUCTS CO.

This large casting, with its many important surfaces, critical dimensions and dozens of holes, part of them threaded, is deburred mechanically by the Roto-Finish Process. The result is a highly profitable saving in time over hand methods and an improved microinch finish!

This startling new process of deburring, grinding, honing, buffing and coloring is used with equal success on a wide range of steel, brass, aluminum, stainless and nickel steel parts . . . from small pieces up to 75 pound castings. Send for complete information . . . or let us process samples of *your* parts—without charge!

a Craftsman's care...

...in every Fairfield Gear

ALTHOUGH the modern equipment on which Fairfield gears are produced is capable of uncanny accuracy on large scale production, every operation is nevertheless under surveilance of skilled craftsmen to insure the finest possible workmanship. Fairfield cuts no corners, but puts painstaking effort into the production and inspection of every vital gear and part going into equipment upon which the lives of civilians and soldiers and the safety of our nation rest.

● Consult Fairfield on your requirements — if they can be handled, you'll be sure of a craftsman's care in every piece.

For Quiet Gears

Not many engineers realize that the success of nonmetallic gears is due to three properties: high impact strength, wear resistance and resilience.

Of these properties resilience is responsible for quietness because it absorbs the effects of the minute errors unavoidable in commercial gear cutting.

Textolite gear material is thirty times as resilient as steel while Fabroil has even higher resilience. Hence in any gear application, where quietness is important, the use of Fabroil should be considered.

For further information write Section L-238, 1 Plastics Avenue, Pittsfield Mass.

THE *first* FIRST-AID in the TREATMENT of INDUSTRIAL BURNS

Burns account for 4½% of industrial accidents and total millions of man-hours lost. Reduce this waste. Treat burns quickly (within 15 minutes of occurrence) and minimize the possible cycle of blister formation, infection and incapacitation. Gebauer's Tannic Spray is especially useful for the "quick treatment" of first, second, and small area third degree burns. A stable, antiseptic, tannic acid solution packaged in a self dispensing bottle. Simply "press the lever" and direct an antiseptic, soothing spray over burn area. Nothing to mix—no time wasted. Evaporates rapidly covering burn with a protective tannic acid film. Keep a package in every first-aid kit and in departments where burns occur frequently. Available at physician supply stores, safety equipment dealers and most drug stores. Literature will be sent on request.

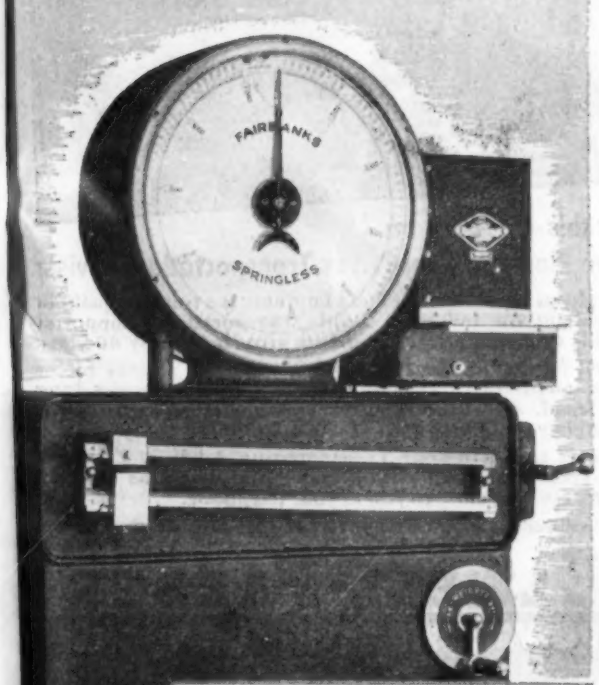
Here's What This Fairbanks-Morse Scale Can Do for You...



Equipped with Printomatic, this Fairbanks-Morse Dial Scale is actually more than a scale . . . it's a highly efficient production tool that can speed operations and eliminate costly errors in your plant.

In addition to weighing accurately all kinds of commodities—here are a few of the many *plus* jobs this remarkable scale can do for you.

- Count large or small parts
- Weigh and print records of carloads in motion
- Print shipping records—incoming and outgoing
- Control ingredients of paint and other products
- Record flow of liquids
- Automatically control aggregates
- Guard secret formulas in compounding
- Control batching of various materials
- Prevent costly weighing errors

Investigate now for present or future planning. The adaptability of Fairbanks-Morse Printomatic Scales to all types of industry is producing outstanding results.

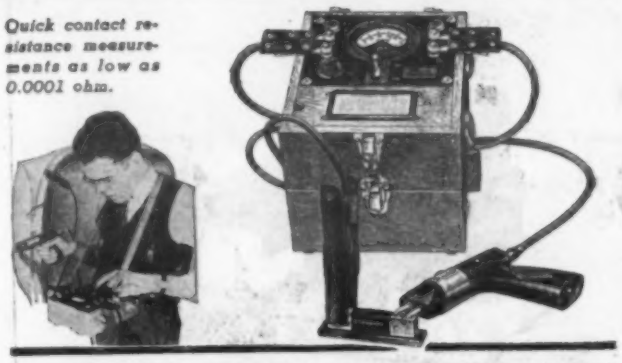
Quick contact resistance measurements as low as 0.0001 ohm.



A NEW LOW-RESISTANCE TEST SET (Bond Tester)

In addition to widespread use in testing aircraft bonding, Shallcross Low-Resistance Test Sets are widely used for testing railroad bonds; radio equipment; contact resistance of relays, switches, circuit breakers, and other electrical equipment.

In using this new model (No. 648), the Tester is supported in front of the operator by shoulder straps. Measurements on a "Go, No-go" basis as low as 0.0001 ohm are made by attaching the fixed clamp to one side of the bonded surface, and touching the hardened points of the Pistol Grip Exploring Probe to the other side.

FAST-ACCURATE EASY TO USE

Write for folder on the complete Shallcross test set line.

REDUCE YOUR TOOL INVENTORY

use TECO *Cemented Carbide!*

FEWER TOOLS—MORE PRODUCTION!

When you use TECO Cemented Carbide there is no "high inventory" problem. Big stocks are not necessary because TECO Cemented Carbide stays on the job for such long runs, fewer replacements are required. Its unusual resistance to wear and breakage prolong tool life. Cutting edges stay sharp longer, more pieces are produced per grind, less time lost for re-tooling. The extra capacity and new low price make TECO Cemented Carbide most economical for high speed turning, boring and facing. Prompt, dependable delivery can be made on tools and blanks, in grades, styles and sizes for most machining needs. Have our engineering department make recommendations. Write for catalog.

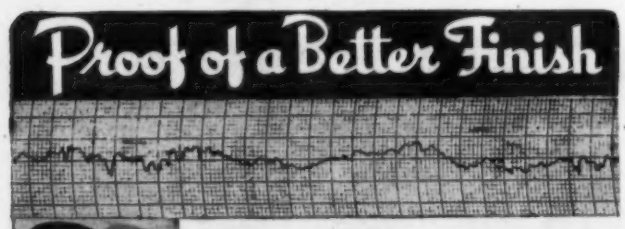
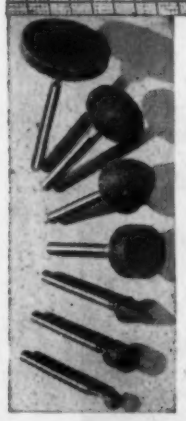
Proof of a Better Finish





Each small square represents 1.0 micro inches. Micro inch r.m.s. = 0.9 — 1.6.

Surface Analyzer Tapes Show You Get A Better Finish With Chicago Wheels

These results were obtained at a rate of 10 pieces per hour in an aircraft parts plant. Material, X-13-15, Rockwell 60 to 57, grinds out .006 to .007 stock. Chicago Wheel used, ½ x ½ x ⅛", Grain 180, Grade L Arcite. Spindle Speed 40,000 r.p.m. Lapping and super finishing eliminated on this job.

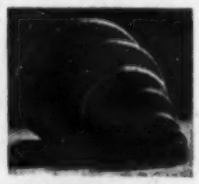
Can you match that finish? Sounds phenomenal, but you can do the same thing with Chicago Wheels.

Squint your eye along the surface, test it by "feel" or be scientific and use a surface analyzer to measure your finish in micro inches—you'll find that Chicago Wheels give you better finishes, hold closer tolerances and have longer life. They're mighty fast, too; are often spoken of as "bottleneck busters."

Half a Century of Specialization has Established our Reputation as the Small Wheel People of the Industry.

Now Featuring Wheels Up to 3" in Diameter

For the duration, with full WPB approval, we are specializing on the small sizes — anything up to 3" in diameter.



Write for Catalog and we will include Engineering Survey Forms helpful in getting the right solution to your own grinding problems.

Mortite
THE UTILITY TAPE OF MANY USES

A pliable plastic that comes all ready to use. Just press into place with the fingers and it stays put. It sets firmly, does not crack, chip or shrink. Can be painted. Unrolls like ribbon and adheres to any clean, dry surface, inside or outside.

- A good plugger-upper to seal cracks in plaster, woodwork, around casements, screens, etc.
- Makes good packing and gaskets. Stops rattles.
- Keeps out dust, dirt and vermin.
- Superior for setting glass in wood or metal sash.
- Used in shipping to hold parts firm, preventing friction, rust and damage in transit. Goes on fast, comes off easy and clean.

About 80 feet of ¼" Mortite to a roll. Order through your Supply House or $1.25 postpaid.

Write for Circular

Mortite is also custom built to size and formula for a wide variety of applications. Submit your problem to us and get the benefit of our laboratory research in adapting Mortite to your use.
